ABSTRACT

As part of its commitment to the creation of change agents, Nova Southeastern University requires that its candidates for graduate education degrees complete practicums and Major Applied Research Projects (MARP) that are work- and community-based problem-solving research projects. A primary dissemination vehicle is the inclusion of exemplary Practicum and MARP reports in the Educational Resources Information Center (ERIC) database. This document is a computer-produced bibliography with abstracts of the 562 practicum reports added to the ERIC database by Nova Southeastern University during 1992-1995. (JLS)

 * Reproductions supplied by EDRS are the best that can be made *

Introduction

It is difficult to achieve consensus on important issues in education today. A notable exception is the general agreement that if our institutions are to meet the complex needs of the 21st Century, the key change agents must be the professionals at each work site.

At Nova Southeastern University, we have institutionalized processes to bring about change in institutions through our Practicums and MARPs (Major Applied Research Projects), work and community-based problem-solving research projects required as essential academic work in our graduate education degree programs. The direct level of change resulting from completion of the Practicum and MARP applied research requirements is the realization of desired improvements in the work environments of our graduate students.

Beyond this localized focus of change, the documented work of NSU students/change agents is widely disseminated throughout the larger education communities. A primary dissemination vehicle is the inclusion of exemplary Practicum and MARP reports in the Educational Resources Information Center (ERIC). ERIC, a national computerized system accessible to most educators in the United States and in many other parts of the world, is a most useful repository for these identified best practices documents.

During two decades, 1972-1992, 923 Practicum and MARP reports completed by Nova graduate students were accepted into the ERIC system. NSU's total number of reports in ERIC increased by 562 during 1992-1995. What you are about to see are abstracts of each of the 562 documents. We believe that no other university has committed this deeply to ERIC and, by extension, to the changes required for survival in the next century. You are encouraged to order on microfiche from NSU's Distance Library Services (complete the enclosed order form) the full text of any practicum in this volume.

The Practicum and MARP process represents NSU's commitment to change. A key component of NSU's strategic plan matches well with the Practicum and MARP process: "To enhance society through educating professionals as leaders and change agents."

Richard Goldman, Education Provost
Fischler Center for the Advancement of Education
February, 1996

ED386430 SPO36179
A Training Program Designed To Develop Knowledgeable Paraprofessionals with Improved Job Performance Skills To Meet the Needs of Teachers and Special Education Students.

Davis, Julie H.
May 1995
81P.; M.S. Final Report, Nova Southeastern University.

Language: English
Document Type: DISSERTATION (040)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96

The paper reports on a practicum project to assess the training needs of paraprofessionals and to develop a training program to meet those needs. The first section of the paper is a literature review, which revealed few studies that have addressed the efficacy of paraprofessionals, though research that has been done indicates that paraprofessionals working with handicapped children have a direct effect on the students' academic performance. The literature also reveals that few states systematically train or certify paraprofessionals, and few universities teach preservice teachers how to utilize paraprofessionals in the classroom. The training program was designed to help improve the knowledge of disabilities, working relationships, and job performance skills of a target group of 12 special education paraprofessionals who work with K-2 students with handicaps in a rural Maine island school. Twenty-five skills were identified as those a paraprofessional should possess for job success; a needs assessment survey was administered to participants. Overall, entry skills and knowledge of the target group assessed ranged from 20 percent to 60 percent level of proficiency, well below the 80 percent or above level of proficiency preferred in the literature and among professionals surveyed for the study. The objectives for the program were for the paraprofessionals to increase their knowledge of disabilities, working relationships, and job performance skills by a program objective of 80 percent. The target group participated in a 12-week training session developed from a needs analysis assessment. Each of the weekly work sessions is described in the report. Project evaluations and assessments indicated that all program objectives were met, with the target group improving dramatically in all areas. Recommendations for staff development budget and expenditures, plus topics to be covered are outlined. Ten appendices provide: Maine Department of Education Regulation Assessments: Needs Assessment; Summary of Needs for Paraprofessionals; Posttest for Paraprofessionals; Pretest for Paraprofessionals; Summary of Results of Pre/Post Evaluations; Pre/Post Professional Training Evaluation of Paraprofessionals; Paraprofessional Training Evaluation; and Paraprofessionals Certificate of Participation. (Contains 40 references.) (ND)

Empowering Elementary School Teachers through Awareness and Training.

Prihoda, Lisa D.
1995
47P.; Ed.D. Practicum Report, Nova University
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96
This practicum was designed to increase the level of teacher awareness of the concept of empowerment at an elementary school in the rural Southeast. A 12-week program was developed and implemented to train the school's 32 teachers in team building, conflict resolution, communication skills, team dynamics, and facilitative leadership. Weekly meetings were designed to impart these skills and to develop a school improvement plan to address school management issues and problems identified by the teachers themselves. An average of 14 teachers attended the weekly sessions, with attendance higher in the early weeks and lower in the later weeks of the program. A post-program survey indicated that although overall teacher response to the training was favorable, it was not as positive as initially anticipated. An appendix contains a copy of the teacher survey. (Contains 14 references.) (MDM)
Descriptors: Communication Skills; Conflict Resolution; Elementary Education; *Elementary School Teachers; Group Dynamics; *Leadership Training; *Self Actualization; Teacher Administrator Relationship; Teacher Attitudes; Teacher Workshops; *Teamwork

Improving Black Students' Self Esteem, Self Confidence, and
(cont. next page)

Pride through Parental Participation, Teacher and Student Education

Chandler, Phyllis

1995

58P.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida Journal Announcement: RIEJAN96

This practicum was designed to improve the self-esteem and self-confidence of black, largely lower-class sixth-graders at a middle school in a predominantly white, middle-class neighborhood. Students were exposed to multicultural resources, including works of literature by and about African-Americans. A cultural awareness workshop for teachers was also held. Parent participation and involvement was encouraged through weekly telephone conversations and two parent-teacher conferences. Black role models from the local community were brought in to serve as guest speakers. Various classroom activities were undertaken to promote teamwork, cooperation, and cultural awareness among the black, white, Asian, and Hispanic students. A posttest survey of students and teachers found that 24 of the 25 black students in the experimental group said that they liked school, 20 of the 25 said that they felt comfortable in the school, and 17 reported feeling a sense of belonging. The five teachers involved all reported that the self-esteem and self-confidence of the black students had increased. Three appendices provide copies of the student and teacher surveys. (Contains 20 references.) (MDM)

This practicum identified the problem of inconsistent use of developmentally appropriate practices by staff in an early

Full Text Provided by ERIC

childhood center and implemented an inservice program to increase the use of activities based on individual appropriateness rather than on age alone. The solution strategy utilized a self-assessment survey of classroom practices to identify staff perceptions. Ongoing inservice training was implemented, based on the survey, observations, and consultations with staff. The inservice sessions included large- and small-group training, consultations with staff, and a parent education component. Evaluation results indicated an increase in developmentally appropriate practices as well as other positive changes, although the established outcome levels were not attained. One unanticipated result was that following the implementation period, fewer staff responded that children engaged primarily in self-directed and open-ended activity. (Seven appendices include the classroom practices survey form, inservice agendas and evaluation form, inservice summaries, and an annotated bibliography. Contains 66 references.) (AP)

Descriptors: Classroom Environment; Classroom Techniques; Day Care Centers; Early Childhood Education; *Inservice Teacher Education; Parent Education; Preschool Children; *Preschool Teachers; Program Effectiveness; Self Evaluation (Individuals); Staff Development; Teacher Attitudes; *Teacher Improvement; Teacher Student Relationship Identifiers: *Developmentally Appropriate Programs; Staff Attitudes

Development of an Operating Plan for Implementation and Evaluation of an Adult Education Network and Electronic Journal at Nova Southeastern University.
Poliner, Elizabeth A.
Aug 1994
259P.; Ed.D. Research Project, Nova Southeastern University.
EDRS Price - MF01/PC11 Plus Postage.Language: English Document Type: DISSERTATION (040); RESEARCH REPORT (143)
Geographic Source: U.S.; Florida Journal Announcement: RIEJAN96
The purpose of this study was to develop an operating plan for the implementation and evaluation of an adult education network, AEDNET, and electronic journal, "New Horizons in Adult Education," at Nova Southeastern University (Florida). The following research questions were addressed in this study:
(1) What does the literature indicate in regard to electronic networks and journals in adult education? What is an electronic network? What is meant by an electronic journal?
What emerging technologies will impact this type of network (cont. next page)

and journals? What are the current academic networks and journals now in operation? How are they functioning? To what extent are their sponsoring agencies satisfied with their operations? (2) What are the problems and issues surrounding the assumption, implementation, and expansion of an electronic network and refereed electronic journal? (3) How should the policy-making advisory process be structured within the program and the university? How should the journal editorial review process function? (4) How should the network and journal be funded? Are there appropriate sources for grants to continue and expand activities? (5) How should their benefits and value be promoted within the university and the adult education practitioner and student community? (6) How should faculty and students be trained? How should the network and journal be staffed? (7) What information about the network and journal should be disseminated and how? and (8) How should the network and journal be formally evaluated? Results indicate the importance of several areas of implementation; it is essential that an evaluation plan be developed and implemented, so that improvements and decisions related to the network and journal may be based on the needs and expectations of the participants, and improvement plans are needed for marketing, technology, staff/training/committees, and funding. Data is illustrated in 20 tables. (Contains 102 references.) (MAS)

Journal Announcement: RIEJAN96
These three essays focus on the creation and sustenance of learning communities among students and instructors at the college and university level. The essays are: (1) "Creating and Sustaining Learning Communities" (Carolyn Dudgeon), which emphasizes a seamless educational continuum for lifelong learners in a collaborative, caring environment that

incorporates modern computer and multimedia technology; (2) "Creating and Sustaining Learning Communities: The PHE Scholars Program" (Timothy M. Sullivan), which emphasizes that the creation of learning communities requires a thorough understanding of the interplay among community building, group learning, systems thinking, personal mastery, mental models, shared vision, and leadership; and (3) "Creating and Sustaining Learning Communities: The Electronic Learning Community" (Gloria K. Wolfson), which emphasizes the role of computer technology in recreating learning communities, especially among part-time and nontraditional college students. Each essay contains references. (MDH)

ED3886007 EC304209
From Early Intervention to Preschool: Preparing Parents for the Transition.
Schmutz, Lori J.
1995
103p.; M.S. Practicum. Nova Southeastern University.
EDRS Price - MF01/PC05 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96
This practicum addressed the anxiety and stress experienced by parents when their 3-year-old child with a disability or risk of developmental delay is transitioning from early intervention services to preschool. Questionnaires were administered to 20 parents to identify the causes of stress and anxiety during transitions and to determine their knowledge, involvement, and satisfaction with the transition. In addition, five staff members of the public schools were interviewed regarding preparation of parents for the transition. Factors which were found to contribute to parents' stress and anxiety concerned lack of parent involvement and information regarding the new program, the closed door policy of the new placement, and the lack of both a written transition plan and interagency collaboration. In response, four parent education workshops and a familiarization visit to the preschool programs were conducted. The workshops, which included both the sending and receiving teachers, addressed transition options, rights of parents of special needs children, and parent participation. The strategy was (cont. next page)

successful in reducing stress and anxiety levels of parents and increasing their knowledge of and confidence in the transition process. Appendices provide the pre/post-tests, interview form, and a workshop evaluation. (Contains 43 references.) (SW)

Descriptors: Articulation (Education); Developmental Delays; Knowledge Level; *Parent Education; Parent Rights; Parent School Relationship; Parent Workshops; Preschool Children; *Preschool Education; School Readiness; *Stress Variables; *Transitional Programs

ED386000 EC304202 What about Me? A Practicum Addressing the Needs of Children Who Have a Preschool Sibling with Impaired Hearing.
Weston, Marsha C.
29 May 1995

56p.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MFO1/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96
This practicum developed a special program to serve the elementary school child who has a preschool sibling with a hearing impairment. A special book addressing the cognitive and emotional needs of the siblings was written and distributed to 35 children whose families were enrolled in a clinic-sponsored correspondence program and to 15 children whose families participated in on-site clinic programming for preschool children, ages 2-5, with hearing impairments. The book provides information about the anatomy of the ear, hearing loss, assistive devices, communication, and methods of teaching children who have impaired hearing. Feelings which may be experienced by children whose sibling is hearing impaired are described. Games and illustrations are included in the book; additional children's reading materials are identified. A mail-in card allows the child to write to the clinic with questions or concerns. Questionnaires about the book were returned by 12 children and 6 parents from the correspondence group and by 8 children and 7 parents from the on-site group. Based on positive responses, the book is being used on-site and through distance education to include all family members in programming. The child and parent questionnaires are appended. (Contains 27 references.) (Sw)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96
This practicum provided a 12-week group instruction program which was designed to enable 8 high school students with attention deficit hyperactivity disorder (ADHD) to gain knowledge about ADHD, implement strategies for coping with the disorder, and employ self-advocacy skills. The program involved administration of an ADHD measure prior to and following the intervention; administration of a learning strategies inventory; development of a list of classroom modifications which students discussed with their teachers; development of goal attainment sheets; selection of instructional materials; and interviews with individual students, parents, and 16 teachers. Data analysis indicated that students: (1) increased understanding of their ADHD; (2) increased understanding of individual learning styles; (3) gained strategies to self-advocacy; and (4) selected modifications to address individual learning styles. It was concluded, however, that high school students need more than a 12-week group program to learn self-advocacy skills and strategies for coping with the disorder. Three appendices provide the goal contract used, a classroom modification checklist, and the ADHD pre/post-test. (Contains 20 references.) (DB)

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJAN96 This practicum was designed to improve development of individualized education plans (IEPs) of mainstreamed students with disabilities in one junior high school, through application of strategies to increase the active involvement of regular classroom teachers, parents, and students in the decision-making process and IEP development. Interventions with classroom teachers included encouraging their initiation of IEP goals and design of instructional modifications. Interventions with parents included more school/parent communication and involvement of parents in specific intervention strategies such as sending the parents achievement memos, copies of important special education news, and monthly communication regarding their child's academics and behavior. Interventions with students included multidisciplinary team screening and involvement of the student on the multidisciplinary team and in initiating goals and objectives. Data analysis indicated that the practicum resulted in greater participation of regular classroom teachers, parents, and students in decision-making and the IEP process. Recommendations resulting from the practicum include continuing having regular classroom teachers initiate goals, objectives and classroom modifications; continue with annual training for parents on parents' rights and responsibilities regarding the IEP; and provide all special education students with training to allow them to become more active participants in IEP development. Fourteen appendices present the forms, letters, questionnaires, and screening instruments used in the practicum. (Contains 41 references.) (DB)

1995 66p.; Ed.D. Practicum, Nova Southeastern University.

EDRS Price - MF01/PC03 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJAN96 A model program was implemented to provide services to 17 children with special needs in a community-based preschool. Meetings with representatives of the public schools and the community preschool center established a framework for providing inclusive education and resulted in development of an interagency agreement, which clarified staff and agency roles, legal issues, services, and costs. Time was allocated for instructional planning by preschool staff members, special education staff, and an early childhood consultant. A questionnaire was administered before and after implementation of the program to determine the ability and confidence level of the staff to provide services in the classroom. The results indicated that staff were more comfortable with the implementation of team teaching and gained confidence in their ability to work with children with special needs through inservice training. Letters were sent to businesses to encourage support within the community for innovative programming. Fundraising resulted in receipt of donations and in-kind services. Appendices include the teacher attitude questionnaire, a monthly listing of curriculum topics, a description of the special educator role, and a modified lesson plan. (Contains 25 references.) (SW)

ED385976 EC304171 Creating a Positive Academic Environment for Students with Behavioral Disorders Using the Foxtire Pedagogy. (cont. next page)

Gromme-Clark, Marcia

1995

50p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC02 Plus Postage.Language: English
Document Type: PRACTICUM PAPER (043); TEST., QUESTIONNAIRE (160)Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96

An intervention with six elementary-aged students with behavioral disorders was designed to increase positive attitudes toward school and learning, to improve self-esteem and empower students. Students identified characteristics of a good teacher, identified characteristics of memorable learning experiences, were assessed on academic skills and attitudes, established a real-world connection between academic goals and the need to accomplish them, designed projects incorporating their objectives, developed a plan to complete the project, identified a method of evaluation for their project, and reflected on problems with their project and ways to improve it. At the conclusion of the intervention, four out of six students indicated that they liked school, and all of the students passed their academic subjects. Inappropriate behaviors decreased, although regular education teachers did not notice any changes in students' attitudes. There was no measurable evidence of increased self-esteem using the Piers-Harris measure. Students' writing skills improved as measured by the Peabody Individual Achievement Test-Revised. Students also appeared to be more enthusiastic about writing, publishing their work, and reading than before the intervention. Appendices provide the teacher questionnaire and a student attitude evaluation instrument. (Contains 17 references.) (SW)

A program was implemented to involve 10 parents in helping their preschool children with language delays. Monthly parent support groups were held, and 10 professional speakers lectured to parents on child development topics. Parents were trained by a speech language pathologist to be language facilitators for their children. Parents were also encouraged to participate in developmentally appropriate play, use appropriate library books with their children, and listen to and converse with their children. After the program, parents completed a questionnaire addressing topics covered by the speakers and trainers, including the essentials of child development, language acquisition, and literacy skills. All of the parents had learned to listen more attentively to the intent of their child's language, were altering their language, and using shorter sentences. All children were tested before and after the program with the Zimmerman Preschool Language Scale. Over the 8 months of the program, gains for auditory comprehension ranged from 12 to 22 months and gains for verbal ability ranged from 10 to 24 months. The child development questionnaire and program evaluation questionnaire are appended. (Contains 20 references.) (SW)

Journal Announcement: RIEJAN96

A project was developed and implemented to help correct the behavioral problems most commonly found in the kindergarten classroom in a central Florida school. Three literature-based units were produced and used by a target group of six kindergarten teachers and their students. The objectives were to increase positive behaviors in listening, decrease aggressive behaviors, and increase getting along with other (cont. next page)

students by 10%. The main strategy was the use of writer-developed stories based around each of the identified behaviors along with follow-up classroom activities. A listening teacher observational tool, editorial team survey of aggressive behaviors, and a teacher-made rating scale for getting along with others were used by the target group of teachers to measure each student's behavioral change. All of the project objectives were met. Results of the posttest showed an 82% increase in positive behaviors in listening, a 40% decrease in aggressive behaviors, and a 77% increase in positive behaviors in the area of getting along with others. (Appendices include a needs assessment survey, a literature evaluation form, a listening teacher observational tool, an editorial team survey of aggressive behaviors, and a teacher-made rating scale for getting along with others. Contains 12 references.) (Author/TB)

The Implementation of Objective, Self-Report Measures in a Family Preservation Program.
Stroh, Darren Thomas
1994
74p.; Master's Practicum, Nova Southeastern University.

EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE
(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96

This study implemented objective, self-report measures in family preservation practice in hopes of increasing family involvement in families, goal attainment and growth. The practicum began by administering a survey entitled "Attitudes Regarding Measures" to practitioners, participants, and funders of a small, rural family preservation program. The practicum then educated all of the above parties as to the possible benefits and pitfalls of implementing objective measures. The Family Assessment Device was administered to each of the two families involved once per week. The measures were scored and the findings were discussed and included in the practitioner's reports to participants and funders. The measurement implementation went for 10 weeks and was followed by re-administering the "Attitudes Regarding Measures" survey to the above parties. This study indicated that measures properly administered increased the joining between professional and participant, empowering the participant. It also seemed to create a change in the role of the professional

from a problem identifier to one of solution sounding board. Time on task and attendance records were monitored to collaborate the hypothesis that measures would increase the focus and direction of service delivery. Attendance increased but time on task proved too difficult to measure. (Contains 31 references.) (Author/JE)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN96

The relatively high incidence of troubled youth with poor academic skills in the areas of reading, language arts, and math has been, and continues to be, a very real concern in Canada. This fact in itself is indicative of existing problems in providing effective educational services to troubled youth. The school itself has been equated with being a major contributing factor to the problem. Alternative educational strategies were implemented through the redesigning of the existing academic program delivery system within a secure custody facility. Specifically, a program utilizing individualized, one-on-one instruction was designed and implemented. The youth involved in the project, at the end of a specified time period, demonstrated success in one or more of the identified subject areas of reading, writing, and/or math as evidenced by a measure of growth resulting from the comparison of achievement results attained before implementation, and after the project has ended. The purpose was to provide evidence to support the recommendation for modification of current methods of educational delivery. Documentation and statistics in table and graphic form of the results are included. Contains 24 references. (JE)

Maintaining an Effective After School/Evening Youth Program When the Main Source of Financial Support Was Discontinued by Obtaining Assistance from Government Agencies, Private Sources, Community-Based Organizations, and Volunteers.

1994 98P : Ed.D. Practicum, Nova Southeastern University.

EDRS Price - MF01/PC04 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RI3EDEC95

A practicum was designed to keep an after-school and evening youth center in operation in spite of the loss of the main source of financial support (i.e., the contributions of the founding church). The program director, youth ministries director for an urban parish, sought additional support and implemented various strategies to keep the program going. She appealed to government sources, sought corporate funding, and petitioned community organizations. Fundraising activities and the recruitment of adult and youth volunteers supported continuation efforts. Networking and participation in a coalition of different agencies broadened the program's base of support. Results of the implementation effort were positive. The program continued to benefit local youth. Funding and the sources of funding increased, and the volunteers became definite contributors to the success of the program. Support has been tentatively secured for the subsequent fiscal year, and plans to enhance and strengthen the program are being made. Six appendices present supplemental information, including attendance and volunteer sign-in sheets, an account sheet for funding sources, and some public relations materials. Two tables present practicum information. (Contains 15 references.) (Author/SLD)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RI3EDEC95

This practicum was designed to assist the teacher in addressing the learning styles and modalities of students in a second-grade classroom. A learning style inventory was administered to the students, and two learning style inventories were administered to the teacher. Mini-training sessions were then developed on addressing learning styles by the researcher. The sessions were held with the teacher after school; class observation visits were held on the same days. Over the course of the training, the teacher began to address more of the students' learning styles and learning modalities. The improvement of the students, on their writing samples and in their math skills, were greater than anticipated. Changes in the teacher's technology attitudes were positive, and changes in students' attitudes, overall, were as predicted. (Nine appendices include copies of consent letters, samples of the technology attitude assessment surveys, hardware and software assessment data sheets, and samples of the newsletters sent to parents.) Contains 39 references. (AA)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Tennessee
Journal Announcement: RIEDEC95

A project was undertaken at Jackson State Community College (JSCC), Tennessee, to determine an appropriate plan to develop a disabled student services (DSS) program which would coordinate existing fragmented services and add additional services. A literature review was first conducted to determine legal obligations of the Americans with Disabilities Act (ADA) and standards and essential components of DSS programs. A Specials Needs and Concerns Committee was then established to help ascertain needs of disabled students and develop goals for the program. Following a review of findings from an ADA self-study conducted at JSCC, mission and goals statements were developed for the new program and distributed to the Committee for evaluation. Finally, methods were developed to evaluate the effectiveness of the DSS program utilizing quantitative and qualitative measures and were evaluated by DSS administrators at Tennessee institutions of higher education with successful programs in place. In the development of the program, the following conclusions were made: (1) JSCC has a legal obligation to provide a more comprehensive program for disabled students; (2) college employees must receive training to better understand disabled students' psychological, emotional, and physical needs; (3) there should be one individual responsible for coordinating DSS; and (4) the purpose and goals of DSS must be clearly articulated to the college community. (Contains 16 references.) (Survey forms used to gather campus opinions and the program mission statement are appended.) (KP)

Journal Announcement: RIEDEC95

This study describes a pilot program utilizing various multimedia computer programs on a Macquadra 840 AV. The target group consisted of six advanced dance students who participated in the pilot program within the dance curriculum by creating a database of dance movement using video and still photography. The students combined desktop publishing, video for dancers executing ballet, jazz, hip-hop, and acrobatic dance technique, music, and computer generated graphics into a multimedia choreographic presentation. A pre and post-student questionnaire was administered to determine experience and attitudes toward computers, dance, and choreography. The results of the student questionnaire proved that the target group increased their level of knowledge not only in the manipulation of multimedia computer programs, but the utilization of that knowledge for dance choreography and presentations. The students found the pilot program worthwhile and worthy of continuing as part of the dance curriculum. Appendices include: school district mission and belief statements; student pre/post questionnaire; dance terminology for computer database; pilot program review questionnaire; critical thinking and self-reflection checklist; and survey results. (Author/AA)

Journal Announcement: RIEDEC95

This practicum was developed to help educators overcome their uncomfortableness when using a computer. Seven adult (cont. next page)

educators were avoiding using the computers purchased for them to use in their classroom with their students. These seven adult educators showed on a survey that they were very uncomfortable using computers and were unable to perform any of the 12 tasks listed on the survey. They were then enrolled in an individualized instructional course designed to reduce computer anxiety. The 12-week course was given individually to each tutor in a stress-free environment. Twelve tasks were taught at a pace dictated by the students themselves. A survey given at the completion of the course showed that all of the tutors were either comfortable or very comfortable using the computers, and all tutors mastered all 12 tasks. This research showed that students must conquer computer anxiety before they can begin to feel comfortable with computers. Students can overcome computer anxiety by training in the proper environment. Two figures and two tables illustrate data Appendices provide the pre-course questionnaire, pre-course task checklist, pre-course computer comfort level survey, in-progress computer comfort level survey, post-course computer comfort level survey, pre-and post-class task survey, post-course task checklist, and computer software content inventory. (Contains 36 references.) (MAS)

Journal Announcement: RIEDEC95
In response to the poor achievement, negative attitudes, and anxiety of limited English-proficient (LEP) ninth-grade students (n=90) in science classes, a cooperative learning approach to instruction was adopted. In an effort coordinated with teachers of English for Speakers of Other Languages (ESOL), the students were assigned to cooperative learning groups and given specific projects corresponding to the curriculum but requiring explorative and investigative methods rather than reading from a textbook. In addition, the teacher contacted parents by telephone and wrote to them in English, Spanish, and Creole, offering tips for assisting their students. An additional 21 students were brought into the program. Results indicate that project objectives were met in student achievement on a teacher-made criterion-referenced post-test; majority passing the course with a C or better.

Journal Announcement: RIEDEC95
In light of the cross cultural understanding and communication skills likely to be demanded of those in evangelical Christian ministry working all over the world, this project developed, implemented, and evaluated a model for infusing intercultural competency (ICC) into a seminary curriculum at the Faith School of Theology in Maine. From a study of the literature, extant models, and the perceptions of consultants and participants, a 4-quadrant scheme for classifying 36 extant ICC models emerged and a 7-step curriculum infusion model was developed. The model contained four domains--cognitive, affective, behavioral, and organizational--and involved leadership, administration, and

grade; entries in the science fair; regular student participation in hands-on classroom activities; improved student attitudes toward science; use of alternative student evaluation techniques; and parent contact. Suggestions for improvement include further development of the post-test to reflect class activities, creation of a parent guide, and provision of tutoring options. The post-test and class-related forms are appended. (MSE)

Journal Announcement: RIEDEC95

A program was developed to improve auditory and visual stimulation and responsiveness for seven elementary school students (ages 6-7) who had severe/profound mental retardation and multiple disabilities. After initial observation, consultation, and assessment of the students, the 12-week intervention program involved auditory, tactile, and visual stimulation. In addition to daily interventions with a staff member and aide, three nondisabled fifth grade students provided assistance with the activities twice a week. Activities focused on helping students respond to touch and encouraging students to reach for and touch objects. Types of tactile, auditory, and visual stimulation activities and materials are described, along with electronic materials such as a switch toy. Additional activities were added when students began making choices using a communication board. After pretesting students' initial functioning, daily performance on the activities was documented, and a posttest assessed physical performance of the intervention activities. Results indicated that subjects increased their auditory and visual skills in most targeted areas. Pretest and posttest observation checklists and the findings are appended, along with a daily score sheet. (SW)

A Method To Ensure Heterogeneous Mixing of Grade 9 Classes.

Brydges, Bruce
1993
62p.; Ed.D. Practicum Report, Nova Southeastern University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Geographic Source: U.S.: Florida
Journal Announcement: RIIEDEC95
Document Type: PRACTICUM PAPER (043)

This paper presents outcomes of a practicum that was designed to address a need that was created when the Ministry of Education in Ontario, Canada, mandated that all grade 9 classes be "destreamed." A review of educational literature found no methods for ensuring that classes are truly heterogeneous mixed. The practicum was designed to gather data on each student entering grade 9 in order to ensure that classes were mixed according to the following variables: academic ability, gender, special-education identification, and feeder school of origin. Using a holistic scoring rubric, mean scores and standard deviations were developed to guide the placement of students in a timetable designed to support heterogeneously mixed student cohorts. The plan was implemented in a large, modern, rural, composite secondary school in Ontario (Canada). Findings demonstrated that heterogeneous mixing could be achieved for core classes; however, students tended to stream themselves through the choice of optional subjects. Four tables are included, Appendices contain the holistic rating scale, the grade 9 student timetable, and a sample database setup for Lotus 1-2-3. Contains 34 references. (Author/LMI)

Journal Announcement: RIIEDEC95

A program was developed and implemented to improve fourth graders' writing skills in conjunction with the State Writing Assessment Test. The objectives for the program were for 80%

of the students to improve their writing scores by a minimum of 0.5 point using the State Writing rubric as the guideline; to increase students' understanding of the narrative and expository forms of writing by 80%; and to increase the typing and keyboarding ability of the students by 20%. The target group of 25 students in a mid-sized elementary school in a large, culturally diverse metropolitan area was immersed in a writer's workshop and participated in a plethora of developmental writing activities, including word processing and a keyboarding skills program. All program objectives were met, with the target group improving in all areas. (Contains 18 references. Appendixes present data, various work sheets, activities, and samples of students' writing.) The Effect of Main Idea Practice Using Computer Assisted Instruction and Desktop Publishing.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEDEC95

A practical took place in a summer remedial program for students with learning problems and specifically focused on five middle school students and how, with computer use and computer assisted instruction, the students increased their ability to recognize main ideas. The students in the target group, with the skills learned in the summer school remedial program, created and word processed articles for the school newspaper. The five targeted students also converted the articles into a school newspaper using a comprehensive, simple desktop publishing program. The one practical objective that was not met was that the five students would demonstrate an improved skill of main idea recognition. Only two of the five students met the objective. Findings suggest that the summer remedial program should continue to produce a newspaper. The professional-looking, attractive, and informative newspaper made all the students in the summer program very proud. The parents' excitement at seeing their children's contributions to the newspaper was obvious. (Contains 21 references and 2 tables of data. Appendixes present a daily computer lab schedule, software evaluation forms, student lesson results report, pretest/posttest instrument, a help sign, skill sheet inventories, and the newspaper.) (Author/RS)

Motivating First-Grade Students To Read Independently for Pleasure through a Whole Language Program.
Gunter, Johnette C.

1994 : Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida

Journal Announcement: RIEDEC95

A practicum was designed to motivate first-grade students in a rural community in the southeastern United States to read independently for pleasure in the classroom and at home. A whole language program was implemented which did not include the use of basal readers or workbooks. Children's literature was the primary source used for reading instruction. Whole language activities and reading materials were provided for the students. The 23 first-grade students had the opportunity to read books from the classroom library and check out books from the school library. They were encouraged to take their library books home and share them with their families. All parents were asked to participate by reading to their children at home and encourage their children to read to them. Analysis of the data revealed that students read at least one book per week during their free time from the classroom library. Students also checked out at least one book from the school library per month. The students who took one library book home per month shared their books with their parents. (Contains 21 references and 6 tables of data. Appendixes present a reading list form and a parent verification form.) (Author/RS)

BEST COPY AVAILABLE**Record - 31**

Journal Announcement: RIEDEC95
A practicum was designed to improve the oral/aural vocabulary which would eventually improve the reading vocabulary of second grade learners. The practicum, implemented in a second grade by a media specialist who counted on the cooperation of the classroom teacher, consisted of a read-aloud program in which the students read daily from a variety of trade books. Subjects were 26 students who had already completed an English-as-a-Second Language program and were considered to be at an independent level in English. Pre- and posttests were administered which recommended reading and listening levels for a frustration, instructional, and independent level of instruction, as well, as a writing vocabulary test. Flyers were developed for community speakers and school wide programs; and for recommended read-aloud lists for recently published titles for various age levels. Faculty members were encouraged to read aloud to their respective classes. "Buddy" readers were trained to read and listen to the participating second-grade class--each second grader had his/her own buddy. Other teachers also changed their attitudes on the importance of reading aloud. Data analysis revealed that students' oral/aural vocabulary and reading vocabulary increased, and the school principal has instituted a regular read-aloud portion to the existing reading program. (Contains 46 references. Appendixes include a read-aloud packet listing various genres and age-appropriate books, and a parent night notice in English and Spanish.) (NKA)

Encouraging the Participation of Families of Elementary-Age Children in Home-School Literacy Activities through Staff Development, Parent Workshops, and Individual Family Plans.
Fullwider, Natalie Austin

1995 : Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEDEC95
A practicum was designed to increase participation of families in home-school literacy activities. The school was located in a suburban village in the northeastern United States. Data indicated that many families of first- and 3rd (cont. next page)

second-grade minority students who were bused to the school for integration purposes were not participating in home-school activities. A target list of families was established and a comprehensive solution strategy to increase family participation was implemented. The solution strategy consisted of: (1) parent workshops to help families understand how they can be involved; (2) staff development to support parent involvement efforts; and (3) individual meetings with families to develop individual plans for family literacy. The program was coordinated by the school psychologist. Positive outcomes included substantial gains in the participation of minority and non-neighborhood families as well as increased family participation in academic activities (e.g. homework completion and projects). Family participation in other activities (e.g., parent workshops and PTA activities) remained low. Positive outcomes are interpreted as being more a result of the dynamic interactions that developed between home and school than in the specific activities. A combination of leadership and personal attention to teachers and families created a momentum for action which led to improved communication and increased family participation. (Contains 37 references. Appendixes present teacher interview questions, a blank individual family plan for literacy, three notices of parent workshops, outlines and objectives of parent workshops, and tips for parents who want to help their children become readers. (RS))

Descriptors: *Literacy; Minority Groups; *Parent Participation; *Parent School Relationship; *Program Effectiveness; *Staff Development Identifiers: Family Literacy

Changing Agency Policy and Practice To Support the Inclusion of Gays and Lesbians as Therapeutic Foster Parents.
Frazer, Danica
1994
207p.; Master's Practicum, Nova University.
EDRS Price - MF01/PC09 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: Florida
Journal Announcement: RIIEDEC95
This practicum targeted a multi-service child and youth care agency in which lesbian women and gay men were implicitly excluded from serving as therapeutic foster parents. The setting in which the practicum project was developed, implemented, and evaluated is a not-for-profit, provincially chartered, and publicly-funded organization, headquartered in Edmonton, Alberta (Canada). The practicum was designed and implemented to advance the acceptance of gays and lesbians as therapeutic foster parents within the agency. The strategy included developing and obtaining formal approval of

amendments to existing agency policies on status/conditions of employment and human rights, and organizing and obtaining consensus on both a proposed operational statement regarding the approval of gays and lesbians as therapeutic foster parents, and on changes to the existing materials used in the recruitment and selection of therapeutic foster parents. The results of this strategy were mixed. While consensus was obtained on adopting the proposed changes to existing recruitment and selection materials, no consensus was reached on employing the proposed operational statement on the approval of gays and lesbians as therapeutic foster parents. Implications to these outcomes are discussed and recommendations are offered. Appendices include interview and questionnaire formats, existing and revised policies, operational statements, recruitment and selection materials, presentation materials, and meeting minutes. (RM)

Promoting Critical Thinking Skills for Fourth Grade Students through the Use of Children's Books.
Patterson, Sharon R.
1993
78p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIENOV95

This practicum was designed to improve critical thinking skills and reading abilities in fourth-grade students in a rural elementary school. A test administered prior to implementation of the practicum revealed that students' reading ability ranged from primer to third grade level. During the practicum, 15 students who were members of an alternative education class, read children's books and developed questions and answers for each level of Bloom's Taxonomy. Evaluation of the practicum and teacher observations revealed that the program was successful. Students spent more time on-task to the degree that one student completed only one level, five students completed all six levels, and the remaining students completed levels three through five. An added benefit was an overall improvement in students' attitude toward school. Social skills were also developed as students (cont. next page)

(142)

Geographic Source: U.S.: Florida
Journal Announcement: RIENOV95
A practicum was designed to reduce disruptive behavior of students riding school buses in a small multicultural community. It was determined that many students were disruptive when riding the school buses, making it difficult for the bus drivers to ensure riders' safety. The practicum implemented a school bus safety education and public awareness program involving students, parents, teachers, drivers and administrators. As part of the program: (1) bus drivers were given inservice training for effective discipline and reviewed safety procedures; (2) teachers and administrators were encouraged to promote better discipline aboard the school buses; (3) students were brought into the process from the beginning; and (4) the school bus discipline code was revised and accepted by all parents and students. Evaluation results showed that the goal of the program was met with achievement of a 66% decrease in disruptive behavior. (Six appendices include the survey and responses on school bus discipline and safety, a statistical breakdown of disruptive incidents during 1993-1994, and the original and revised school bus discipline codes. Contains 34 references. (AP)

Improving Skills To Facilitate Play in an Inclusive Preschool Setting through a Collaborative Staff Self-Training Project.

Truxal, Marilyn R.

1995

96p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); PROJECT DESCRIPTION
(141)

Geographic Source: U.S.: Florida
Journal Announcement: RIENOV95
This practicum identified an inability of staff to facilitate play among students with diverse abilities in an inclusive preschool setting, and presented staff training projects to improve such facilitative skills. Because the staff lacked knowledge regarding play characteristics, functions, and categories needed to provide necessary interventions and formal play assessment, team-building management techniques were designed to develop a staff in-house training project, providing resources for on-going staff presentations over a period of 8 months. Staff selected their own working committees and topics from a preset list, and at the end of each presentation, offered suggestions for improving facilitation of play skills. After completing the project, the staff were able to identify the knowledge that was lacking, name at least three types of play assessment and use the Smilansky scale to assess play in the classroom, and prepare a position paper on play for use in further staff training and for disbursement among special educators, interns, and parents at the school. (Six appendices include a staff survey form, topics for staff training, session agendas for staff meetings, a position paper on play, and a checklist for play assessment. Contains 108 references.) Improving the Social Skills of Kindergarten Students in Equipment

(cont. next page)

Their Multicultural Setting through a Peacemaking Program.

Leonard, Kathleen M.

1995

58P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.Language: English
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)Geographic Source: U.S.; Florida
Journal Announcement: RIENOV95

A project to improve the social skills of kindergarten children in a multicultural setting by a simple peace education program was implemented. Noting that kindergarten children did not exhibit good social skills and were not able to solve conflicts in a peaceful manner, the project was designed to incorporate and increase group problem solving, cooperative learning, peacemaking language skills, and parent participation. The results showed that 15 out of the 20 kindergarten students solved verbal conflicts peacefully, accepted others into their play, and collaborated and shared with each other. The results also indicated that involving the home, school, and the community in the peace education program resulted in opportunities for students to improve their social skills. Three appendices on student checklists for verbal solving of conflicts, acceptance of other children, and collaborating and sharing are included. Contains 23 references. (AP)

Language: English
Document Type: RESEARCH REPORT (143); PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIENOV95

This practicum was designed to improve third grade students' problem-solving abilities through the use of problem-solving strategies. The project was implemented in a suburban elementary school that has a high percentage of students with limited or no English language skills. Activities were designed to increase the students' interest in solving word problems and to improve their problem-solving skills. Divided into small, cooperative groups, the students were taught how

to use open-ended questions and problem-solving strategies such as patterns, charts, and graphs. Emphasis was placed on mathematical language development, reading word problems with understanding, and writing. The students wrote, read, and solved original word problems. Parents participated as math-partners. Observation data on how the students responded to various activities were collected and recorded in a log for evaluation. The students' work was evaluated regularly during and at the end of the project. Samples of the students' work were kept in a portfolio so that progress could be monitored by the teacher and the students. The results of the practicum indicated that when students are taught problem-solving strategies and how to read word problems with understanding, the students will be successful in solving word problems and will enjoy solving the problems. The questionnaire used for preliminary student interviews is included. Contains 16 references. (AA)

(160); CONFERENCE PAPER (150)
Geographic Source: U.S.; Florida
Journal Announcement: RIENOV95

This practicum aimed to improve the way staff communicated with young children through in-service training in a university early childhood laboratory school setting. Eight in-service training sessions, combined with discussion groups, classroom/recorder observations, and practical applications, were provided. The program focused on appropriate ways to communicate with young children. An observational checklist and a survey were used in pre/post training to document the problem and to evaluate changes after implementation of the (cont. next page)

training sessions. Criteria for success of the program were to increase knowledge of appropriate ways to communicate, provide staff, the opportunity to practice appropriate communication interactions, and to conceptualize the technique, as measured by the use of the pre/post training instruments. Success was evident in an increased number of correct responses on the posttest survey instrument and observations of staff utilizing appropriate ways to communicate with young children. The conclusion of the training sessions produced higher ratings, which indicate that the in-service training successfully improved staff-child communication and their interactions. Ten appendices include the survey form, observation checklist, trainee manual, tips for working with children, and observation summary reports. Contains 33 references. (Author/AA)

Geographic Source: U.S.: Florida
Journal Announcement: RIENDV95

In July 1993, Twin Lakes Technical College and North Arkansas Community College merged to form the North and South Campuses, respectively, of North Arkansas Community-Technical College (NACTC). A study was undertaken to compare the institutional climate for human resource development (HRD) at the two campuses to determine the effects, if any, of the centralization of resources on the climate. Research on HRD climates in college mergers was examined and questionnaires were mailed to all full-time employees of the two campuses. Responses were received from 65.6% (n=21) of North Campus employees and 64.6% (n=66) of South Campus employees. An analysis of responses indicated the following: (1) staff satisfaction with the HRD climate were slightly higher at the South Campus than at the North Campus; (2) at both campuses, faculty showed the lowest level of satisfaction with their HRD climate; (3) the rate of satisfaction for North Campus

classified staff was lower than any other college employee sub-group; and (4) no significant difference, however, was found between the HRD climate at the two campuses, which appears to indicate that increased organization size is not a major influence in personnel practices. (Contains recommendations for HRD policy and 23 references.) (KP)

In response to a situation in which limited-English-proficient Haitian students were found to have behavior problems, anxiety, depression, low motivation, low energy, and underachievement, attributed to low self-esteem, a project was undertaken to improve student self-concept and achievement. Ninth- and tenth-grade Haitian English-as-a-Second Language (ESDL) students (n=100) were first administered a county oral language test, a written English test, the Piers-Harris self-concept scale, and a behavioral checklist as pretests. Subsequently, ESDL techniques were implemented in concert with self-concept-enhancing group activities, games (soccer, basketball, volleyball), filmstrips, television viewings, tape recordings, field trips, and an inter-ethnic group fair. At the end of the academic year, the students were re-tested with the same measures, and results indicated improved self-esteem, classroom behavior, and learning ability. Appended materials include the written English test, behavior checklist, practical implementation/log form, a description of language proficiency levels, a letter to parents, a checklist for parents to help their children in school, class work samples, and a field trip permission slip. Contains 30 references. (cont. next page)

Journal Announcement: RIENOV95

This practicum developed and implemented an organization development plan to improve agency and team effectiveness and staff satisfaction at a private agency that provides educational and treatment services to children with emotional, mental, or behavioral disorders. An extensive literature review on organizational development was conducted and resulted in a model for team building that included components which addressed theoretical bases, major purposes, process, and implications for managers. An organizational diagnosis was conducted, using an instrument that evaluated indicators of excellent organizations from the viewpoint of its members and also using in-depth structured interviews with staff and board members. A total of 12 teams (about 120 individuals) was formed at two institutional campuses and two group homes. Each team attended a retreat at a conference site for 1 evening and 2 days, during which team building was selected as the organizational development strategy of choice. Subsequently, team building sessions were conducted. A decreased staff turnover rate, improved organizational productivity, and increased level of employee satisfaction were observed following the intervention, as well as increased post-test scores on the indicators measure. Appendices include the structured interview questions, the team building survey and forms, the team building process overview and interview questions, and analysis of results. (Contains 105 references.) (DB)

Journal Announcement: RIENOV95

The martial art of Aikido was used as an intervention with 15 middle and high school students with severe emotional disturbances in an alternative educational setting. Students with an extensive history of violently disruptive and assaultive behaviors were trained for 12 weeks in this nonviolent Japanese martial art in order to achieve the following outcomes: reduce disruptive classroom behaviors and verbally abusive and physically assaultive behaviors toward other students and staff members, and decrease the number of school-wide disciplinary referrals for violent behaviors. The training focused on peaceful conflict resolution, nonviolent self-defense, individual and group confrontation management, and autogenic relaxation training. Significant improvements were achieved in reducing violent behaviors during the conflict de-escalation training sessions, and these positive behaviors transferred into other classrooms. Parents and administrators also noted positive behaviors exhibited by student participants, including enhanced respect for authority and peers, improved conflict de-escalation skills, and enhanced feelings of confidence and self-worth. It was found that Aikido training can be implemented with a minimum of scheduling disruptions and financial expenditure. Appendix is a 12-week behavioral summary chart. (Contains 46 references.) Creating a Public Domain Software Library To Increase Computer Access of Elementary Students with Learning Disabilities.

McInturff, Johanna R.

1995
70p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 plus Postage.Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: West Virginia

Journal Announcement: RIEND95

Information is provided on a practicum that addressed the lack of access to computer-aided instruction by elementary level students with learning disabilities, due to lack of diverse software, limited funding, and insufficient teacher training. The strategies to improve the amount of access time included: increasing the number of computer programs by creating a public domain software library, widening the variety of software, and providing teacher training to integrate software across the curriculum. Public domain software was obtained from online services, computer bulletin boards, and commercial vendors. Each program was previewed and classified by subject area (English, spelling, reading, social studies, science, and music) and by type (drill, application/strategy, entertainment, simulation, creativity, and utility). The service was publicized, and teachers were trained in procedural access. Students with learning disabilities reproduced the software, designed and printed labels, and maintained a dissemination policy. An increase in student self-esteem and social interactions was displayed. Computer access time increased as the number of programs increased. By supplying inexpensive, functional software to the teachers of children with learning disabilities for use in computer-aided instruction, individual student needs were addressed. Appendices include a Teacher Questionnaire for Computer Access, a list of seven vendors, and a list of the software acquired. (Contains 34 references.) (SW)

(Cal Poly). The project is an example of action research that systematically developed an inservice presentation for improvement of classroom instruction in language arts. Reading specialist candidates reviewed the literature, developed evaluation criteria, designed an inservice outline, and implemented the program in a variety of school settings. The Reading Coordination of the University Center for Teacher Education at Cal Poly validated the development process and the inservice by including both in the course of study for "Education 531: Supervision of Reading." The results of the project showed that the systematic development of an in-service on instructional grouping for an integrated language arts program did improve the training course for reading specialist candidates at Cal Poly. Recommendations include the implementation of the development process and inservice outline in the "Reading Specialist Course of Study" at Cal Poly. (Contains 12 references.)

ED383969 CG026253 Reducing Verbal and Physically Abusive Behaviors of Ninth through Twelfth Grade Students through a Structured Support Group Process.

Gillium, Lloyd R., Jr.

10 Apr 1995
67P.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Geographic Source: U.S.; Florida

Journal Announcement: RIENOV95

This practicum describes a method developed to address a high school problem involving grade 9-12 students who verbally and/or physically abused other students. In order to enable these students to interact appropriately, without abusive behaviors, a structured support group curriculum was written. The high school administrative staff and a co-facilitator were trained through in-service training, and a structured support group program to target students was facilitated. Although there was a decrease in disciplinary actions from fall 1993 to fall 1994, the goal of reducing by 25 percent the number of students referred for disciplinary infractions was not met. However, the expectation that by spring 1995 there would be an additional 25 percent reduction in the number of students referred for displaying verbally and physically abusive behaviors was met. Likewise, the goal of reducing the number of long-term suspensions or expulsions when compared to the number of suspended or expelled students during the 1993 school year was also achieved. It is argued that the combined solution of working with targeted students with one or more disciplinary infractions, and monitoring the student discipline progress through the high school assistant principal for discipline, resulted in improved student behaviors. ED383943 CG026057 Increasing the Awareness of Child and Youth Professionals in the AIDS Crisis.

Norris, Norman Dale

1994
170P.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC07 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida

Journal Announcement: RIENOV95

This practicum was designed to increase the awareness and HIV/AIDS literacy of child and youth professionals in a school, agency or ministerial setting. Children and youth were not being provided with factually correct information because the adults had no formal instruction and/or HIV 1 literacy training. Workshops were designed and materials prepared explaining and defining the role of child and youth professionals in the AIDS crisis. Additionally, plans were developed which present a holistic picture of the AIDS crisis and how to respond. Lessons/manuscripts were developed to be utilized collectively or singly to increase the HIV 1 literacy of the professionals in the work setting. This information was also presented to various schools, agencies, churches, and a local medical school. Analysis of the data revealed that many child and youth professionals are grossly misinformed as to the modes of transmission of HIV, methods of preventing the spread, and the segments of the population which are most at risk. When prepared with factually correct information, the child and youth professionals can make appropriate decisions in their personal lives and can be prepared to make a difference in the lives of children and youth. Six tables and the survey instruments are included. Contains 43 references. (Author)

Geographic Source: U.S.: Florida

Journal Announcement: RIENOV95 This practicum was designed so that high school seniors would have the opportunity to apply for and receive scholarships to further their education. A strategic plan was organized to increase the awareness of the available scholarships, grants, and financial aid of high school seniors. Activities included: soliciting business donations; publishing and distributing a bimonthly scholarship newsletter; constructing a scholarship bulletin board and scholarship files; holding monthly meetings with the students of the senior class; holding parent conferences; and organizing a formal financial aid meeting with an expert in the field of financial aid. The culminating activity was a senior awards ceremony honoring those students who won or received scholarships throughout the school year. Analysis of the data revealed that 67 percent of those students who were furthering their education after high school did utilize the scholarship materials and information available to them by applying for one or more scholarships. Parents also benefited. This practicum met all expectations and outcomes. The scholarship office files, and awards ceremony were all well received by students, teachers, parents, administrators, and the community. (Author)

Journal Announcement: RIE0CT95

This report describes a social studies skills enhancement program developed and implemented to improve social studies performance in a public middle school (grades 6-8) in the southeastern United States. The targeted group consisted of four males and four females of mixed performance ability in a sixth grade class. The 12-week study focused on improvement in: (1) vocabulary skills on a pre- and post-test; (2) use of a CD-ROM card catalog, retrieval system, encyclopedia, and

word processing software/hardware as measured by a teacher-made pre- and post-Multimedia Instructional Technology Identification and Usage Skills Tests; and (3) critical thinking map skills on a pre- and post-test. The program contained various activities and strategies using multimedia instructional technology for the improvement of these skills. By comparing the results of pretests and posttest, the study's conclusions indicated that all of the program's objectives were met successfully. Appendices include assessment materials and analysis of assessment data. Eight appendices include tables showing pre- and post-test results and a vocabulary skills midpoint test. (EH)

ED383497 RCO20063 Preparing Teachers for Working with Children of Migrant Families: Building a Home-School Connection. Bradford, Mary

1995 203p.; M.S. Practicum, Nova Southeastern University. EDRS Price - MFO1/PC09 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida Journal Announcement: RIE0CT95 The East Coast Migrant Head Start Project serves a diverse population of approximately 7,400 migrant children and their families as they traverse the East Coast from Florida to Maine. These families live a unique lifestyle and come from varied backgrounds that differ from the dominant culture. To meet the project goals, new teachers as well as returning staff need information about the children and families they serve and must develop an understanding of the conditions that are a part of the migrant lifestyle. In addition, staff turnover is high due to the seasonal nature of the work. Based on review and analysis of the research literature and on classroom observations, a series of training workshops was developed to prepare teachers for working with children of migrant families. Training strategies focused on providing accurate information about migrant families and their lifestyle; how the teacher's own background, culture, and training influence classroom practices; effective ways to build home-school relationships; and how to incorporate unbiased activities and materials into the multicultural and unbiased activities and materials into the

(cont. next page)

classroom environment. Several assessment tools were developed to gather information concerning teacher knowledge and practices, and to evaluate the training. The training took place at a Migrant Head Start Center in Bailey, North Carolina. Three administrators, three teachers, and one teacher aide participated in the 10 weekly training sessions, although administrator attendance was sporadic. Outcomes of the training and participant responses were favorable. Appendices include sample surveys, evaluations, training materials, and suggested resources. (KS)

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEDCT95
This practicum was designed to enhance the perception of the early childhood professional among parents of children at an on-site child development center in a medical center. A pattern was documented of negative communication and lack of respect for the goals and policies of the child care center. The practicum's goal was to replace the parental misconception of early childhood professionals as "baby-sitters" with an increased awareness of early childhood professionals as "educators." Three expected outcomes were articulated to evaluate the practicum by means of a survey. An awareness program was developed that included activities providing information and education regarding the role, significance, and necessity of early childhood education in the lives of young children. Networking and collaborative activities provided opportunities for parents to develop positive interaction with child care professionals. A child advocacy forum was held to increase collaboration among parents and teachers; and a media campaign provided visibility and education for the parents. A parent survey measured program effectiveness and parent perception. Survey data indicated there were increased positive perceptions of early childhood education and increased interaction and mutual respect between

parents and educators. The survey form is included. (Contains 26 references.) (TM)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEDCT95
This practicum was designed to provide 237 elementary school students with strategies to improve their social interactions with adults and peers. The professional staff included 12 full-time teachers and 8 itinerant teachers who traveled to schools within the district. Workshops in conflict resolution strategies were presented for teachers to model and teach in the regular classroom. Peer mediation team were formed to patrol the playground in the effort to resolve conflicts before they escalated into verbal and/or physical confrontations, and media center materials were purchased to reinforce prosocial behaviors. Analysis of the evaluation data demonstrated that students' interactions with adults and peers improved, although teachers continued to express a need for conflict resolution techniques and strategies to teach and model in the classroom. Also, students utilized the prosocial materials from the media center. As indicated by the results, children proved that they could learn to solve their own problems, and that through peer mediation, they could resolve conflicts in a positive manner, thus avoiding the consequences of anger and violence. (Includes 44 references, the teacher's attitude survey, and peer survey of student's behaviors.)

ED383411 PSO23030 Improving School Climate by Using Conflict Resolution in Grades K-6. Bernadette L. McNulty. 1994

116p.; Ed.D. Practicum Report, Nova Southeastern University.

EDRS Price - MF01/PC05 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: Florida
Journal Announcement: RIEDCT95
A 12-week practicum was developed to improve school climate by using conflict resolution in grades K-6. Staff and students completed a poll designed to assess their concerns about the daily functioning of the school. The school's climate was discussed in light of how the student body reacted to the school setting, with emphasis on areas where supervision was not too obvious. Following the survey results, the focus shifts to a concentration on the areas of recess, playground, assemblies, and hallways. Rules in each of these areas received a new direction. Classes received instruction in how these areas would be addressed and what was expected of students. Careful supervision and analysis of the data allowed the researcher to adjust methodology and address problems as they arose. By the end of the 12 weeks, clear guidelines for acceptable behavior in the cafeteria, recess, hallway, and auditorium had been established. The students knew their limits and willingly accepted the imposed restrictions because they had been part of the rule-making process. (Fourteen appendices include the questionnaire for conflict resolution and the various checklists used. Contains 40 references.) (AA)

Geographic Source: U.S.: Florida
Journal Announcement: RIEDCT95
An 8-month practicum was developed to eliminate the communication gap experienced by parents moving from the multi-communicative atmosphere of the elementary school to the relatively incidental reporting environment of the junior high school. The practicum sought to increase home-school communication through parental awareness and involvement. An unexpected outcome was the intensity of teacher resistance to parental involvement, causing a shift in the practicum's focus from awareness to political involvement. Subjects were 72 parents of sixth-through ninth-grade students, and an unspecified number of teachers and students. Parents collaborated on publishing a newsletter, writing letters, and organizing educational forums to foster debate on issues of education specific to their children and the school environment. Increased parental involvement led to the establishment of school committees seeking to replace the junior high school with a middle school. Results of the practicum indicated that the solutions to many of the problems with the school were political, and that understanding the power base of both teachers and the union is a necessary precept to any parental action for improved home-school communication. (Ten appendices include questionnaires and post-program surveys, workshop handouts, a home-school relations checklist, and a letter from parents to the newspaper. Contains 26 references. (SM))

As part of its annual program review process, the Department of Engineering Technology at the Community College of Allegheny County, in Pennsylvania, conducted a study of computer usage in community college engineering technology programs across the nation. Specifically, the study sought to determine the types of software, Internet access, average student to personal computer (PC) ratio, and computer language education available at each program. The study also determined if the program was accredited by the Accreditation Board for Engineering and Technology (ABET). Questionnaires were mailed to 103 Engineering Technology departments, receiving a response rate of 38.8% (n=40). Study results included the following: (1) 27 colleges had at least one ABET accredited program; (2) on average, respondents indicated that 28% of students owned PCs; (3) the 12 departments that had Macintoshes also had IBM-based PC's (IBM-PC's); (4) while 30% of students had access to Macintosh PC's, 95% of students had access to IBM-PC's; (5) colleges had an average full-time student/PC ratio of 4.3; (6) all but one school reported a course in the department to provide computer skills; (7) 59% of computers were networked; (8) 8 schools provided student Internet accounts, while 9 had no Internet connection at all; (9) the most frequently required languages were BASIC, Assembly, and C; and (10) the most popular programs included AutoCAD, Wordperfect, Mathcad, pSpice, Lotus, and Excel. Seven appendixes include the survey design guide, the computer use questionnaire and a list of schools contacted. (MAB)

Language: English

college- and foundation-related information needed to carry out their duties, a project was undertaken to develop a board orientation manual. To determine what information should be included in the manual and how it should be organized, a literature review was conducted, focusing on the rationale for private support, the role of volunteers in development activities, the information needed by volunteers, and concepts of handbook development. From this review, it was determined that the manual should provide information on the following areas: (1) the foundation's mission and bylaws; (2) the college's organization, mission, and goals; (3) the role of foundation board members and explanations of committee assignments; (4) the role of the executive director and foundation staff; (5) programs, awards, and events sponsored by the foundation; (6) foundation finances; (7) a schedule of board meetings; and (8) a list of foundation members. The first draft of the manual was completed in February 1995 and mailed to members of a summative evaluation committee formed at NACTC for suggestions and revision. It was determined that the manual be produced in-house. (Contains 22 references.) (Appendixes provide manual criteria; information on members of formative and summative evaluation committees formed for the project; and the final orientation manual.) (KP)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Virginia
Journal Announcement: RIEOCT95

The practicum reported was designed to improve listening and speaking skills of 30 (grades 7-11) learners of Arabic as a second language. The teacher/researcher used these classroom instructional strategies: introducing carefully selected dialectal vocabulary and language forms; concentrating only on oral skills; avoiding heavy introduction of other language skills; reducing teacher correction during utterances; easing

of pronunciation requirements, especially for vowels at word end; and de-emphasizing grammar. Analysis of student performance revealed improved oral skills when the skills are introduced intensively at the beginning of the language learning process and without interference of other language skills. It was also found that students preferred to spend more time listening and speaking than reading and writing. It is suggested that speaking the language changes student attitudes toward the Arabic instruction and may lead to improvements in reading and writing skills. It was also found that using Modern Standard Arabic can minimize confusion and frustration of students of different cultural backgrounds. Contains 16 references. (Author/NSE)

ED383220 FLO23065
Increasing General Science Achievement for Spanish Immersion Students through an Integrated Educational Approach. Zuluaga, Fabio Elecer Gomez
1994
104p.; Ed.D. Practicum. NOVA Southeastern University.
Appendix E contains some small type.
EDRS Price - MF01/PC05 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Missouri
Journal Announcement: RIEOCT95

The main goal of this practicum was to increase general science achievement and improve acquisition of Spanish as a second language in a group of 21 sixth-grade Spanish immersion students. The students were having some difficulty with Spanish learning due to lack of Spanish science vocabulary, lack of appropriate science materials accommodating the differing levels of Spanish proficiency, and complexity of grammatical structures used in some Spanish science textbooks. Based on these needs, the researcher developed a concept-based science workbook in Spanish to address the academic, cultural, and linguistic variation in the students. The workbook contains six units, each divided into three sections corresponding to stages in the learning cycle theory: vocabulary; main ideas; and concept application. The report describes the practicum's context, problem, anticipated outcomes and evaluation instruments, solution strategy, and results and recommendations. The results indicate that the (cont. next page)

students increased their science vocabulary to a level at which they could understand important general science concepts, facilitated by meaningful and well-coordinated science experiences and projects. Appended materials include data on student achievement, data on science concept instruction difficulties, and a natural science test in Spanish. The workbook itself is not included. Contains 34 references. (MSE)

Residential/group child care in the United States was established more than a century ago with permanency planning emerging in the 1970's. Even though there are many beneficial reasons to promote and participate in permanency planning, participation has often been difficult in a rural state. This paper describes a residential child care provider's efforts to increase family based services. Project data determined residential child care providers, youth in care, and family participation in permanency planning meetings within North Dakota. Results indicated residential child care providers and children in care participated in 30% of all permanency planning meetings in the state. Permanency planning meetings were attended primarily when they were conducted within a 30 mile radius of the agency. Factors affecting provider participation at permanency planning meetings included: time management; conflicting responsibilities; distance; lack of sufficient notification; and costs and expenses. As a result of the findings, a proposal was made for using conference calling as a way of increasing the provider participation in permanency planning meetings. Although face-to-face participation is desirable, conference calling could alleviate many of the factors affecting participation. (JE)

Development of a Working Model for a Private Foster Care
Agency To Facilitate Planning Considerations Associated with
Archetypical Cases Involving an Incarcerated Parent.
Mathias, Scott A.

UNIVERSITY OF EAST ANGLIA

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEOCT95
Foster care cases involving an incarcerated parent can present unique challenges in planning and case management for caseworkers. Incarcerated parents are expected to maintain communication and contact with their children and caseworkers in order to prevent termination of their parental rights. Agency caseworkers are often not trained to navigate the obstacles to case management associated with an incarcerated parent. This paper presents a working model derived from the suggestions of agency caseworkers and of current literature to act as a reference and training tool for agency workers. A survey checklist composed of prominent suggestions from the working model is appended. The checklist was used to assess the number of suggestions used by the caseworkers who worked with such cases prior to and after the administration of the working model. Overall, there were more suggestions reported being used by caseworkers on the second administration of the survey checklist. Although only slight increases in the number of suggestions used in case management were noted in this project, the working model has promising potential for use as a training tool for case workers who have had relatively little experience working with foster care cases involving an incarcerated parent. A Plan for the Use of Distance Education Delivery Systems Options To Link Culinary Programs at Johnson and Wales University.
 VanLandingham, Paul
 Jun 1993
 124p.; Applied doctoral Research Project, Nova University.
 Language: English
 Document Type: DISSERTATION (040); TEST, QUESTIONNAIRE (160)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEDCT95

Johnson and Wales University (J&W) found a need to deliver a culinary curriculum at the branch campuses (located in Charleston, South Carolina; Norfolk, Virginia; North Miami, Florida; and St. Maarten, Netherland Antilles) equivalent to that offered at the Providence (Rhode Island) campus. A research project studied what delivery system options were available, what the best option for J&W was, how J&W could use distance education to meet the university's needs, and how a distance education option could be introduced to administration. Data collection involved the following methods: a literature review; attendance at workshops and conferences to identify various options available; consultations and interviews with experts in distance education; viewing existing programs; internal consultations with faculty and administration to determine perceived needs; communications with vendors; plan development; and presentation to the university planning committee. A questionnaire was distributed and collected at the conclusion of the presentation; results were used to make revisions to the implementation strategy. A copy of the completed plan for the use of distance education systems was submitted to J&W's president. The plan linked all branch campuses of J&W. The recommendation was to implement a two-way interactive television system that would link all branch campuses. (Appendixes include a 101-item bibliography, questionnaire, the plan presented to the president, and cost factors for compressed video and satellite broadcasting.) (YLB)

 Journal Announcement: RIESEP95

This program was developed and implemented to identify, pre or post graduate discipline based art teachers who did not have training. The reason this training was important is because the district has written and adopted a kindergarten through twelfth grade DBAE art curriculum. The objectives for this program were for all the teachers in the target group to successfully complete a full day inservice training session; and improve their classroom environment by the increased use of art prints and critical thinking skill questioning strategies. Teachers and their students also viewed a DBAE instructional video created by the writer in order to observe and practice DBAE teaching strategies. All participants were observed teaching an original DBAE lesson. All the program objectives were met with five of the seven target group teachers improving dramatically in all areas. The two remaining target group teachers also showed marked improvement. Appendices include DBAE Observation forms, DBAE student and teacher artwork, and a DBAE activities page and surveys. (Author)

Geographic Source: U.S.; Florida
 Journal Announcement: RIESEP95
 A practicum project implemented a developmentally appropriate intervention to increase school success for at-risk children in kindergarten through grade 3. Two corollary aims of the project were to determine the causes of at-risk status before retention or school failure occurs, and (cont. next page)

to involve parents in their children's educational process. An extended-day early intervention program (after school) 2 days per week for 1 hour per day was implemented to help Chapter 1 students experience success in language arts. Eight home-school partnership workshops in English and Spanish were provided to the parents of all students. In addition, there was a 2-week program of daily parent involvement that included a home-school lending library. Results of student skills tests and pre- and post-program surveys indicated that the parent involvement program was the most successful part of the practicum. Although the at-risk students did show gains, the gains were not as expected. (Six appendixes include questionnaires, parent letter, extended day student survey, and early intervention for school success continuum.) (HTH)

ED382393 PS023296 The Use of the NAEYC Accreditation Self-Study Criteria in the Expansion and Revision of a Staff Handbook.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIESEP95
Target Audience: Smith, Matilda P.

1994
58p.; Master's Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

This practicum paper describes the use of National Association for the Education of Young Children (NAEYC) accreditation self-study criteria in the expansion and revision of a staff handbook for a Florida preschool. The existing staff handbook and staff training programs were found to provide inadequate information on school health and safety procedures, employee benefit policies, and standard ethical practices expected from early childhood professionals. To address these deficiencies, a series of inservice training sessions were held to increase staff awareness in the three areas. Small group activities were used to involve the staff in solving hypothetical health and safety problems and ethical dilemmas. Employee benefits were explained in a separate inservice session. Documents drafted from the joint participation of administration and staff were included in an expanded and improved staff handbook. Post-training results from staff surveys and questionnaires indicated a substantial increase in staff awareness of health and safety procedures, employee benefit policies, and standard ethical practices.

Thirteen appendices contain copies of various handouts used in the training sessions, staff questionnaires, and questionnaire results. (Contains 16 references.) (MDM)

Two strategies were tried to address the need for a multicultural education program to increase cultural awareness and reduce prejudice among a target population of 1,500 students in a middle school setting that was 84 percent white. One strategy included human relations training of 50 students who formed a Cultural Awareness Group within the target population. The second strategy was the creation and introduction of a multicultural curriculum in the interdisciplinary Middle School Program for Advisement, Counseling, and Teaming (IMPACT) classes. All program objectives were met, with the target group's cultural awareness increased and their prejudice decreased. Appendices include a 12-session IMPACT curriculum, a school needs assessment, statistical information relating to the objectives, and copies of various memos necessary for the successful completion of the project. ED382368 PS023247
Increasing Parents' Child Development Knowledge and Use of Effective Discipline.
Handforth, K. Clare
1994 88p.; Master's Practicum Report, Nova Southeastern University.
Language: English Document Type: PRACTICUM PAPER (043); EVALUATIVE REPORT
EDRS Price - MFO1/PC04 Plus Postage.

Interviews with professionals, a literature search, and a parent survey indicated that parents of toddlers had a need for knowledge about child development. This lack of knowledge was believed to be one factor in the reported use of non-effective discipline techniques, with the linking factor identified as unrealistic expectations. For this practicum project, a parent program consisting of 10 weekly sessions covering child development, self-esteem, play, and discipline techniques was designed and implemented. Eleven parents, all part of two-parent families, completed all the sessions. The program included optional supports in the form of a "warm line"--a telephone line parents could call with questions or concerns--and home visits. A book display was included and related to the topic of the particular session. Results of pre- and post-test surveys and reaction sheets indicated that the sessions increased parents' knowledge about child development. Parents reported perceived feelings of increase in comfort and confidence as well as perceived increase in skill levels. Participants also indicated increased use of effective discipline techniques and a decreased use of 7 out of 12 non-effective discipline techniques or punishments. All parents reported that they found the program useful. (Four appendices include the interview questions for local professionals, pretest-posttest survey, reaction sheet, and calendar plan.) Contains 22 references. (Author/HTH)

(160)

Geographic Source: U.S.; Florida

Journal Announcement: RIESEP95

This practicum project defined the roles and responsibilities of parent cooperative preschool team members to help parents identify who was responsible for different functions in the co-op preschool. A 10-week intervention strategy was implemented to provide information and support to parents during the first 2 months of the school year. Strategies included development and use of a roles-responsibility survey, three orientation training sessions, and three feedback systems including supervision. The project introduced awareness of roles-responsibilities in a parent co-operative preschool, a format to address them, and a process to continue support. Evaluation results indicated that the project encouraged the class team members--including teacher, parent instructor, and parent coordinator--in their awareness and agreement of roles-responsibilities operating in the class. (Six appendices include the questionnaire, surveys, parent letters, survey results, a calendar for implementation, and samples of training materials. Contains 67 references.)

Geographic Source: U.S.; Florida

Journal Announcement: RIESEP95

A practicum project was designed to improve awareness among county residents of the needs of the county's children and families generally, and of the work of county board governing a taxing district for children's services.

(cont. next page)

specifically. The objective of the project was to alleviate misunderstanding about the nature of and the need for the Board's work at a time when a "no new taxes" attitude prevailed. The project developed and produced for cable television broadcast a public/government access television program that featured the work of the Board through discussion of issues related to children and families. The program was aired three times daily by the county government access channel, and twice weekly by the cable company that helped produce it and by the other major cable company serving the county. Results of audience estimates and pre- and post-broadcast surveys indicated that the cable television show reached a larger proportion of county residents than the Board alone could reach, that the show permitted in-depth discussion of issues over a sustained period of time, that it allowed the Board to maintain control of the intended message, and that the program increased dramatically the number of times the Board was mentioned in the media. Although there was an improvement in measures of changed awareness among the evaluation group, the change was not as great as anticipated. The survey instrument is appended. (Author/HTH)

Enhancing the Management of a High School's Non-Print Media Collection through a Computer Based Bibliographic Cataloging System.
Fischer, David L.
1995
130p.; Ed.D. Practicum, Nova Southeastern University.
Language: English
Document Type: PRACTICUM PAPER (043); TEST; QUESTIONNAIRE
Geographic Source: U.S.; Florida
Journal Announcement: RIESEP95

Through the development and use of a computer databased bibliographic cataloging system, this practicum aimed to improve the organization and management of the non-print media collections housed in a Native American Indian reservation's high school language arts department and library in order for the teaching staff to gain better access to the collections, supplemental material that supports the English-as-a-Second-Language (ESL) program for the school's Limited English Proficient (LEP) students. A team of educators constructed the database from a commercial software package that cataloged the bibliographic information of non-print collections, designed the database screen, utilized 10 entry fields, and cataloged the 1,528 titles. A training session was conducted with the

teaching staff to demonstrate the database and to instruct on accessing techniques. Workshop materials were written and distributed. At the end of the implementation process, an analysis of high school instructional staff found the non-print media collections more organized and accessible. Staff perceived themselves as deriving greater use from their instructional efforts, and the collections were meeting their instructional needs at a greater level. Four tables, five figures and a diagram illustrate the database and findings. Twelve appendices provide survey instruments, workshop booklet, samples of the printed copy of the book catalog and thesaurus of descriptors, and the procedure manual. (Contains 56 references.) Journal Announcement: RIESEP95

This practicum was designed to expand the preservice teacher's ability to understand and demonstrate the use of computers and new technologies in elementary school lesson planning. Teachers were expected to focus on acquiring skills to operate a computer, computer applications, and other technological resources as tools for learning and instructional practice during a 12-week period. Pre- and post-implementation questionnaires were administered to test teacher attitudes on recognizing, valuing and believing in the advantages of technology in the elementary classroom, especially in future lesson planning. A checklist of word processing skills was used to measure actual achievement. Questionnaire results showed that all participating preservice teachers valued and recognized technology use. Outcomes also (cont. next page)

revealed that all teachers were able to demonstrate their abilities in word processing and multimedia design in lesson planning. An analysis of data from the practicum indicated that with basic word processing, multimedia skills, and a hands-on approach, technology can be integrated with lesson plans. Data is illustrated in four tables. Appendices include: teacher questionnaires, word processing skills and multimedia knowledge checklists, and lesson plan checklists. Contains 40 references. (MAS)

Journal Announcement: RIESEP95

This practicum was designed to train inexperienced teachers in the basics of computer technology, multimedia, authoring, and networking. The goals were to enable teachers with access to computers in the educational setting for the first time to utilize this technology as an instructional strategy and as a management tool. Six teachers were selected, four with classroom computer mini labs, two without, to meet in six weekly sessions to participate in training. Training took place on both Macintosh and IBM platforms. Each teacher included computer technology in a unit of instruction and began to use computers for management purposes. Analysis of the resulting data showed that all objectives were achieved, and all six teachers are actively working with technology. The training sessions attracted the attention of administrators and fellow teachers who are exploring ways to begin using technology. Appendices provide technology skills inventory and evaluation of unit of instruction forms and an outline of the 6-week training program. (Contains 34 references.) (Author/AE)

This practicum addresses the finding that college-bound high school experiential/internship students who pursued stringent secondary education programs often did not have the opportunity to participate in technology literacy elective courses, and therefore did not possess the minimal technology skills necessary for success in post-secondary education or the professional workforce. A technology development competency in: (1) word processing skills; (2) database entry and manipulation; (3) spreadsheet entry and manipulation; (4) desktop publishing; (5) graphic development and manipulation; and (6) audio-visual recording and manipulation. The curriculum design involved the requirement that students use technology in order to complete internship-related assignments; use of lesson plans with reflective activities which introduced technological concepts; the development of activities which were relevant to students' lives and internships experiences which could be illustrated and analyzed with integrated software applications; and engagement in post-secondary media center research that enabled students to conduct on-line searches relating to the professional internship fields. Student competency evaluation consisted of students developing a portfolio exhibiting all technology products developed during the course. Post tests measuring knowledge of technology terms and applications, completion of a comprehensive media center assignment, and exhibition of technology skills at the professional internship site as measured by sponsor feedback on student performance. Week-by-week documentation of the course is provided. Results showed that the implementation strategies greatly improved student competency, and that by regularly providing technology access to students, confidence levels were heightened. Fourteen appendices include many of the instruments utilized in the study. (Contains 15 references.) (MAS)

ED382164 Improving Computer and Technology Integration in a School Setting.
Amico, Jennifer Z.
1995
56p.; Practicum I Report, Nova Southeastern University.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP95
An inservice program was designed to improve the integration of computer technology in a school setting through improved teacher awareness, skills, and knowledge surrounding technology uses in both a classroom and lab setting. Goals included improved teacher literacy, student literacy, and curriculum integration. Outcomes were measured through a staff questionnaire evaluating changes in use and attitudes concerning computer technology integration, an examination of problem lists in computer labs for type and frequency of problems encountered while running the equipment, and a review of checklists for progress made on skills listed for students. To increase staff literacy, an inservice program utilizing present software, hardware, and their applications in the classroom was presented. Software training and demonstrations were offered according to appropriate grade level, interests, and skills. Student literacy was addressed by the development and planned initiation of a checklist of grade appropriate skills in the use of technology. Results show that teachers reported positive growth in attitude concerning the use of computer technology in the educational setting. Workshops which focused on the various age groupings served to expand the understanding of that particular group of students and the specific concerns of the teachers involved. Five appendices are entitled: "Survey of Technology Use"; "Survey of Teacher Need"; "Technology Inservice Evaluation"; "Sample Checklist of Computer Skills"; and "Student Survey of Computer Use." (Contains 24 references.) (MAS)

ED382163 IRO17294 Using Technology To Enhance Student Learning Outcomes.
Cain, Lu
1995
52p.; Practicum I Report, Nova Southeastern University.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIESEP95
This practicum was designed to increase the use of computer technologies, which would enhance student learning outcomes. The primary goal was to improve the language arts skills of third, fourth, and fifth grade students by using specific software and related activities. A secondary goal was to raise teachers' computer comfort levels and skills. With the help of classroom teachers, software was selected and units of study were incorporated with the selected software. Software training sessions were conducted with teachers prior to using the software with their students. Teachers were also assisted in conducting computer lab sessions in which students published their writing. Positive results were perceived from the 12-week implementation. Teachers gained expertise and confidence in using computers. Students independently chose to access academic software programs, and the number of lesson plans including computer software as an instructional resource rose from less than 3% to more than 24%. Five expected outcomes are listed, all of which were met or exceeded through this practicum. Data is presented in seven tables. (Contains 19 references.) (MAS)

 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida

Journal Announcement: RIESEP95

This paper introduces a strategy for increasing the use of behaviorally descriptive language by child care workers in an intensive residential treatment unit. The project's broader goal was to improve behavioral diagnosis and documentation of critical incidents. Critical incidents were commonly documented using inappropriate slang and jargon terms in place of informative, behaviorally descriptive language. A 6-hour training session was conducted with child care workers (N=20) and their supervisors (N=2). Including a didactic presentation, role playing exercises, and a post-test, Intensive follow-up services included content analysis of critical incidents and weekly meetings with child care supervisors. The use of behaviorally descriptive language was found to have increased substantially at the conclusion of the 10-week program implementation period, and staff were found to use descriptive language more effectively when completing critical incidents reports. Appendices contain a project implementation plan, a training outline, a post-test, and reporting forms. (Contains 12 references.) (Author/PB)

Teaching a Model of Social Skills Training to Child Care Workers at a Group Home for Adolescents, for Improvement of Treatment Planning.
 Gramling, Lyle T.
 Geographic Source: U.S.; Florida
 Journal Announcement: RIESEP95

This practical study implemented a training program in the teaching of social skills for 4 child care workers at a group home for 12 adolescents having moderate to severe emotional and behavioral problems. The inservice training program involved teaching concepts, techniques, and social skills terminology during the first four sessions, with training emphasis during the remaining 5 weeks of the practical. During this period, child care workers developed and implemented two social skills training intervention plans. The training program emphasized proactive interventions to

help youths build new strengths and develop more effective coping skills. Content analysis of daily log recordings indicated that the child care workers did improve their treatment planning skills with increased linkages between log recordings and youths' treatment plan goals and strategies. Appendices include the social skills training knowledge test and scores, the content analysis coding scheme and results, an outline of the practical weekly implementation plan, and outlines of the inservice training plans. (Contains 34 references.) (DB)

 Journal Announcement: RIESEP95
 This practical study was designed to improve the communication and social skills of 43 students (ages 14-22) with developmental disabilities by involving families in at-home treatment activities that reinforced and enhanced in-school and community-based speech/language therapy and by increasing attendance of parents at school meetings and functions. Intervention included development of individualized speech notebooks containing activities, lessons, and creative ideas designed to enhance communication skills across the curriculum, in the home, and in the community. Telephone conferences were held with each family and a talent fair was held to showcase students' communication skills. Results indicated greater attendance by parents at school functions, increased involvement by parents in individualized education program conferences, and increased collaboration of parents and teachers to develop school programs. Appendices include, among others, a family information and involvement survey, sample newsletters, and the talent show program. (Contains 37 references.) (DB)

Using Portfolios To Complement the Whole Language Program in a Third Grade Classroom.
1995

103P : Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Florida

Journal Announcement: RIESEP95

A practicum was designed to create, implement, and evaluate a portfolio assessment system in a third grade classroom in a rural area of the southeastern United States, and to demonstrate to students, parents, and teachers the benefits of portfolios in complementing classroom instruction and evaluation. Standards, goals, and objectives for record keeping and evaluation of portfolio assessment were set; instructional writing units and activities were developed; students were trained in the writing process; each student was aided in preparing six working and one showcase portfolio; and students were encouraged to self-reflect and evaluate writing pieces, as well as collaborate with peers. Workshops were offered to parents and teachers to discuss the meaning of portfolio assessment, what composes a portfolio, and what criteria were used to judge progress. Analysis of the data indicated: (1) a greater awareness and understanding of portfolio assessment by the students, parents, and teachers; (2) an increased knowledge by the students of the writing process and the steps of prewriting, choosing a topic, and editing and proofreading when creating stories. (Contains 33 references and two tables of data. Appendixes present teacher and parent questionnaires, pre- and postsurvey instruments for inservice meetings, a student's showcase portfolio, a sample writing skills checklist, a teacher's final portfolio evaluation guide, and a seven-item list of resources for portfolio development.) (Author/RS)

Improving Written Expression of Seventh Grade Mildly Intellectually Disabled Students Utilizing a Basal Reading Program, Journal Writing and Computer Applications.
Wimberly, Sabrena R.
1994

53P : Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIESEP95

A practicum was designed to increase mildly intellectually disabled students' written communication skills by demonstrating functional written expression skills in daily assignments and in social communication. A sequenced reading and language program with the integration of journal writing and computer applications was utilized. Seventh- and eighth-grade students with mild disabilities were provided a structured, language-rich environment in which to communicate. The instructor planned structured activities that involved reading, audiovisuals, current events, and cooperative activities along with a structured, daily writing program. Collaboration was an important aspect in that students were involved in many role playing and verbal rehearsal activities to increase conversation and writing skills. Writing to convey a message was emphasized initially and students were introduced to the function of words in sentences. Progress was monitored using holistic scoring methods. Review of the practicum outcomes revealed 7 out of 10 students were able to demonstrate functional written expression skills in journals and on daily assignments after a competent writer had modeled structure. Students' interaction in cooperative activities provided an excellent platform for writing. Students displayed motivation to communicate. Appropriate use of mechanics was documented along with increases in spelled words, sentence length, and legibility. Reading and language instruction reinforced mechanics rules and built upon them. Increased success is predicted if more time is provided for the program. (Contains a figure and 23 references.) (Author/BB)

Upon request from parents, students were released from a rural Rocky Mountains high school to take a class in religious education where they were encouraged to read at least one chapter of scripture each day. In addition to daily reading, students were encouraged to ponder what they read and apply it to their daily lives. According to the pre-practicum survey data, students had been in school 5 months. When asked how many of the 5 months they had read daily, 30% had not read daily any month. An additional 30% had read daily for three months or less. Only 25% of the students reported that they often or always pondered the scriptures as they read, and 35% of the students reported that they tried to apply what they read to their daily lives. A scripture reading program was organized where teachers, parents, and ecclesiastical leaders combined their efforts and encouraged the students to read, ponder, and apply the scriptures. Parents and ecclesiastical leaders were provided with motivational statements valuing scripture reading and a reading chart. In the post-practicum survey, 57% of the students reported that they had read daily for at least four of the five months they had been in school, an increase of 40% from the pre-practicum survey. Results also indicated very little change in the percentage of students who reported having pondered or applied the scriptures. (Contains 16 references and 13 tables of data. Appendixes present the church mission statement, student survey instrument, program descriptions, program charts and schedules, and sample certificates and stickers.) (RS)

Journal Announcement: RIESEP95

This practicum was designed to provide low-achieving first graders with the opportunity to improve their concept of what a word is and motivate children to become more enthusiastic about the reading process. Cooperative learning, cross-age tutoring, and skill-oriented instruction were utilized in the classroom during the 3-month period to accomplish the practicum outcomes. Assessment tools and surveys were used in collecting data. Outcomes were accomplished successfully. Analysis of the data revealed that through the use of various strategies, the 10 children involved improved word conceptualization, positively changed their attitude toward reading, and enhanced their self-esteem. (Contains 34 references and four tables of data. Appendixes presents sample big book lessons and the attitude toward reading survey instrument.) (Author/RS)

parents in a reading program with their children was one of the best ways to improve reading achievement. Intervention included recruiting parents to enroll their children in a Reading Club. Parents who enrolled their children in the Reading Club agreed to read aloud to their children on a daily basis and to turn in simple reading logs to the teachers each month. As a reward for their parents, read aloud efforts, the children received a free book of their choice each month. The objectives were to improve the students' reading interests. Data used to evaluate the practicum intervention indicated that the reading interests improved. In addition, parents increased their involvement in the education of their children. (Contains 43 references and 10 tables of data. Appendixes present a reading log, enrollment form, and forms for teachers' notes and parents' participation.) This practicum was designed to enhance the academic achievement of high school students in English in a suburban community in southeastern New England. Through a 12-week program of study skills introduced in the English 9 collaborative classroom, the practicum aimed to enable students to recognize their best learning strategies. A pre- and post-survey were developed and administered, a teacher interview was conducted, report cards of participants were reviewed, assignment calendars were developed and distributed, curriculum in computer interventions were selected and presented, and study skills were presented. Analysis of the data revealed that: (1) five out of seven English collaborative students earned a grade of C- or better; (2) six out of seven students passed in homework assignments on time; and (3) five students' report cards reflected two positive comments and zero negative comments. Data also revealed that high school students need more than a 12-week study skills program to increase their academic achievement. (Contains 19 references. Appendixes present a teacher interview form and a

study skills survey instrument.) (Author/RS)

Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG95
Training is often difficult to acquire for family day care providers because most training initiatives are workshops or seminars, which require a specific time frame and which are frequently scattered and lack continuity. A practicum project developed and implemented one unit, or module, of a 13-module self-instructional training program using an existing curriculum for family child care providers. Each module takes an average of 4 to 6 weeks for the provider to complete, and has a self-assessment component to help identify strengths and weaknesses. There are activities in each module as well as readings and references. The training incorporated support by means of a master provider who served as a mentor and a cluster group to validate providers' participation. The goal at the end of the 10-week implementation was to increase the quality of care in the pilot group as measured by the Family Day Care Rating Scale before and after the implementation period. The pilot group consisted of four providers and one mentor. Responses of providers showed a high level of provider satisfaction with the training. The quality of care provided also increased as indicated by the pre- and post-project assessment. Results suggest that this program can prepare providers for National Association for Family Child Care (NAFCC) Accreditation, or for the Child Development Associate (CDA) credential, if instituted by a resource and referral agency or a providers' association. (Twelve appendices include mentor and provider application forms, provider evaluation forms, and pre- and post-assessment scores. Contains 74 references and a 24-item bibliography.) (HTH)

A practicum was designed to address the problem of limited opportunities for parents to participate in their children's preschool education and the dichotomous interpretation between parents and preschool staff of what constitutes satisfactory parent participation within the preschool program. The goal of the practicum was to have parents express satisfaction with the quality and opportunities for parent participation. Thirty parents and four staff members in the prekindergarten program of a public school district participated. A number of activities were implemented, including surveying parent interests and availability, distributing a monthly newsletter, developing a parent bulletin board, and inviting parents to curriculum planning and grant writing sessions. Program staff also received training on strategies for collaboration between parents and schools. End-of-year parent surveys indicated that parent participation and satisfaction grew as the variety of parental participatory opportunities increased. The majority of staff members reported a positive change in attitude regarding appropriateness of parent involvement within the preschool. (Three appendices contain the Illinois State Board of Education annual program review, the parent survey, and survey results.) (WP)

This practicum project was designed to formulate and initiate a plan of action to promote and evaluate a community college Child Care Credential (CCC) training program. A pre-implementation survey indicated that few child care professionals in the community knew of the program or its characteristics. A media campaign was designed to promote the program and recruit child care professionals to it. It consisted of implemented. The campaign consisted of radio and television public service announcement, newspaper advertisements, presentations at local professional meetings, and a mass mailing to all child care centers and professionals in the community. The CCC training program developed by the state Division of Child Development was then presented to 100 participants over an 11-week period. Analysis of entrance and exit surveys to program participants found that the CCC training program was effective and had practical value for child care professionals. Contains 22 references. (MDM)

Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG95
A project was undertaken to create a community of caring, interdependent, intrinsically motivated learners among 21 freshmen students in a community college preservice teacher preparation seminar. Interviews with students at the beginning of the seminar had revealed that most viewed the classroom as

(cont. next page)

individualistic, competitive, and threatening and that all students disagreed with the top-down hierarchical structure. Methods used to create the learning community included allowing students autonomy regarding covering the student syllabus; setting a schedule for student-instructor contacts outside of class for informal discussions, tutoring, and feedback; forming a student advisory committee to create a strong peer culture that perceived teaching as a shared enterprise; and developing collegiality and social skills through cooperative learning groups. To gauge student responses and the level of community formed, students were asked to keep journals and structured, open question interviews were conducted with all 21 students in the 12th session. Analysis of journals in the 6th and 12th sessions indicated that 6 out of 7 students recognized the transformation of the seminar into a community of learners. Similarly, journal entries and interviews revealed that all students felt empowered by the two-way communication system between themselves and the college through the advisory committee and instructor. A self-evaluation instrument, the syllabus, a reflection rubric, and a social skills checklist are appended. (KP)

A practical reading theories learned in the college classroom during the three-week field experience portion of the class. Preservice teachers at a Christian college in a small, rural, midwestern town had few opportunities to implement theories learned during field experiences. A literature review and personal ideas contributed to the development of six solution strategies and three outcomes. The outcomes involved writing journal entries, developing lesson plans, and teaching these lessons during structured observations. Results indicated that: (1) 34 of 39 preservice teachers used 6 to 8 theory-to-practice skills in their journal writings; (2) 21 of

37 preservice teachers incorporated 4 of 5 theory-based components in lesson plans; and (3) 7 of 37 teachers used 4 of 5 theory-based guidelines during observation. (Contains 23 references and three tables of data. Appendixes present a theory-to-practice problem-solving skills list, a lesson plan checklist, and an observation summary sheet.) (Author/RS)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG95

A residential group care facility serving abused children had encountered unprecedented changes both internally and in the community. These changes had been highly stressful for this agency, affecting the morale of those closest to the children, the Child/Youth Care Workers. To address these stressors, a strategy utilizing supportive, growth-oriented supervision was developed so as to: (1) deliver intensive support to Child/Youth Care Workers as growing professionals; (2) support positive adjustment to internal changes; (3) establish a trust-based relationship to agency program management; and (4) increase morale. The central component of the strategy was the development and supervisory support of mutually agreed upon professional growth goals. The application of this supportive supervision resulted in increases in the quality and quantity of communication between child/youth Care Workers and the supervisor, heightened participation in decision making, greater trust, more appreciation of the individual and the employee, and improved morale. This system of supervision also fostered structure and objectivity in evaluations; professional growth plans were added to permanent personnel records which increased accountability and enhanced the objectivity of performance evaluations. Appendices include a calendar plan for implementation activities and the survey instrument. Contains 12 references. (RJM)

ED380720 CG026098
Development of an Effective Relapse Prevention Intervention for the Parents of Juvenile Sexual Offenders.
Marquart, James W.
1994

84P.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: Michigan
Journal Announcement: RIEAUG95

This practicum was designed to assist parents of juveniles who had been placed in residential care for sexual offenses. Although there was a consensus in the field that inclusion of the family in treatment was essential, few family treatment models were available. No family treatment models were found specific to working with families that had children who had been convicted of sexual offenses and placed in residential care. A specific focus taken here was on teaching parents the sexual offense cycle. The offense cycle was seen as critical to understanding the sexual offending behavior and the development of an effective relapse prevention plan. This training took place with natural and foster parents who would have juvenile sexual offenders returning to their homes. Evaluation results indicate most parents would participate in training, that training did increase the understanding of sexual offense behaviors, and that the parents gained confidence in their ability to intervene in their child's sexual offense cycle. Following implementation of the training, parents became more active in the treatment program and were more likely to accept the offender into their home following residential treatment. Professional survey, pre- and post-tests, and test results are appended. Contains 21 references. (Author)

Improving Academic Achievement and Interpersonal Relationships among Diverse 5th Graders by Strengthening Self-Image and Teaching Conflict Resolution Skills.
Gross, Judith Scheffkind

1994
90P.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEJUL95
This practicum addressed the low self-esteem, poor academic achievement, strained interpersonal relationships, and difficulty in dealing with growing diversity noted in fifth-graders in an urban elementary school. A six-part solution strategy was developed that emphasized: (1) building realistic self-esteem; (2) increasing cultural and ethnic awareness; (3) enhancing cooperative learning; (4) teaching conflict resolution; (5) improving language arts; and (6) presenting opportunities for students to share their talents with others. These strategies were implemented over a 12-week period through various classroom activities and individualized projects. Academic achievement, discipline problems, and growth in self esteem were evaluated to determine the effectiveness of the program. It was found that student achievement scores were significantly higher for the fifth-graders exposed to the intervention than for the previous year's fifth-graders. In-school and out-of-school suspensions among fifth-graders decreased 19 percent from the previous year. Student self-esteem increased significantly over the course of the intervention. (Three appendixes contain self-esteem questionnaires, a sample individual action plan, and a sample individual action lesson plan. Contains 17 references. (MDM))

Comparison of the Grade Point Average in Intermediate Algebra of Developmental and Nondevelopmental Students, Revised.

Cunningham, Pearley
Feb 1995
36p.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MFO1/PC02 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)

Geographic Source: U.S.; Pennsylvania
Journal Announcement: RIEJUL95
Journal Announcement: RIEJUL95

A study was conducted at the Community College of Allegheny County, in Pennsylvania, to compare the level of preparedness in an intermediate algebra course for students who placed directly into the course and those who had tested into and completed a basic algebra course. Placement test scores, algebra course grades, and repeat status were determined for the 390 students enrolled in 19 sections of the intermediate algebra course in spring 1993, resulting in a final sample of 248 students who were not repeating and who passed the course. The sample consisted of 35 non-development students (i.e., those who had tested directly into the course) and 213 developmental students (i.e., those who completed the basic algebra course). Twelve of the non-development students received an "A" in the course, compared to 34 students from the developmental group. Similarly, grade point averages (GPA's) calculated for the groups based on course outcomes indicated that the developmental group had a GPA of 2.183, with a standard deviation of 1.242, while the non-development group had a GPA of 2.571, with a standard deviation of 1.481. The z-test used to test the research hypothesis indicated that no significant differences existed between outcomes for the two groups. The study concluded that the developmental students showed no advantage over other students and that the college's mathematics placement test was properly screening students based on algebra skills. This practicum developed a program to enhance the job performance of support personnel (behavior modification technicians) who work with students having conduct disorders. The behavior modification technicians provided building-level support for principals and teachers working with black adolescents from socially deprived backgrounds. Inservice activities were designed and implemented over a 16-week period in the following areas: human growth and development, preadolescent and adolescent development, behavior disorders, pharmacological intervention, behavior analysis, developing anecdotal records, developing Individualized Education Plans, interagency networking, conflict resolution, and program and school guidelines. Participants also were required to design and implement behavioral objectives and show mastery of aggressive control techniques (therapeutic holds) and parent involvement skills. During an additional 16 weeks, participants met and discussed individual student problems. Participants received the training at no cost, and received 3 semester hours credit from the local state university. Significant gains were found in acquired knowledge after participants completed the inservice activities. Support personnel displayed significant gains not only in technical support skills, but also in self-esteem. Appended is a post-training test. (Contains 36 references.) (DB)

This practicum attempted to improve the triennial review process for high school students receiving special education services, make these reviews more meaningful, and use these services. (cont. next page)

reviews to enhance instructional programming. A survey of staff (N=18) involved in special education planning was followed by development of an inservice training program which focused on legal requirements of special education 3-year reevaluations and best practices endorsed by other school districts, states, and professional organizations. A collaborative approach between the school psychologist and the leading special education teacher was utilized in conducting the triennial review of 10 students. Alternative methods of assessment were identified including clinical interviews, vocational evaluation, and reports from outside professionals such as psychiatrists and occupational therapists. In 5 of the 10 cases, a psychological evaluation featuring intellectual testing also took place. Survey questions are appended. (Contains 26 references.) (DB)

This practicum developed a multimodal approach for remediation of "main idea" reading comprehension deficits with secondary school students having behavior disorders. The six target students (ages 12 to 18) attended a school within a psychiatric hospital and residential treatment center and were reading significantly below grade level. The individualized tutorial program duration was from 3 to 12 weeks and utilized strategies which included a paraphrasing technique, computer-assisted instruction, journal writing, and use of high-interest low-difficulty reading material. Students showed an increase in main-idea comprehension mastery measured by the pretest/posttest comparison and a per session graphing on a progress chart. Appendices include a copy of a student contract, sample journals, progress charts, and a paraphrasing score sheet. (Contains 17 references.) (DB)

Journal Announcement: RIEJUL95
This practicum project involved working with four preschool children with mental disabilities to increase their cognitive abilities through the use of computer-based instruction and use of manipulative materials. It also sought to improve the children's social-emotional development and self-esteem. The developmental levels of the four students were determined, and appropriate cognitive objectives were chosen. Concepts taught included shapes, colors, letters, and numbers. Appropriate computer programs were selected to introduce the concepts and provide relevant practice, and manipulative activities were developed to provide tactile stimulation. Children were also provided with opportunities to sort, match, identify, color, paint, paste, sing, and dance about the concepts. The practicum successfully met its objectives. Appendixes contain surveys and questionnaires documenting the baselines and results of the practicum. (Contains 17 references.) (JDD)

Jan 1994 M.S. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC05 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIJUL95

A study tested the effectiveness of precision teaching through a summer pilot project involving four male students between the ages of 6 and 7, all of whom had demonstrated some difficulty with basic reading skills. The 6-week program concentrated on those skills most important to emergent readers, namely, phonemic analysis, sight vocabulary and handwriting. More specifically, objectives for this practicum were for the students: (1) to be able to see and say 20 preprimer Dolch words in one minute; (2) to say and mark the initial consonant sounds of 24 objects; (3) to write the alphabet upper and lower case; and (4) to increase fine motor skill by 50%. Precision teaching is a monitoring system that is used to measure human behavior; it measures learning and measure of specific skills; direct measure of skills using time limits; and the use of continuous daily measure of pinpointed skills. A series of four activities were performed with the children, involving alphabet tiles, cards, word and picture matching and other such instruments. Results showed that students A and B made progress in all three pinpointed skills; students C and D made progress but still were in need of remedial help. In summary, it appears that precision teaching is an excellent tool for small group instruction. The students enjoyed the variety of activities available for practice and even liked being timed and charting their progress. (Contains 21 references and 28 appendixes of data and research materials.) (1B)

Developing Student's Knowledge, Intervention Skills, and a Willingness To Participate in Decreasing School Bullying: A Secondary School's Use of the Curriculum Approach.
1994 85p.; Doctoral Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIJUL95

Due to the increase in the number of non-physical bullying incidents observed by both teachers and administrators throughout the last year at a high-school, students were becoming so intimidated by other students that they were unwilling to even speak up about or report any such incidents to school administrators. A strategy was designed and implemented to increase students' knowledge about bullying. Their skill levels and willingness to participate in a student-run bullying prevention program. The strategy utilized a pre- and post-survey to assess the changes in students' perceptions and fundamental beliefs. In between those surveys 10 half-hour classroom sessions were presented including lectures, presentations, and hands-on demonstrations to inform students and provide a safe place for them to practice bullying prevention. The responses of the students were positive with respect to their answers. Answers indicated that the strategy had provided a challenge to the students' beliefs and they were now much more informed about what behaviors may constitute a bullying act. Students learned how one can safely intervene or report a bullying incident they might witness. As a result, the students were much more willing to participate in both helping to write a school policy on bullying or intimidation and helping to participate in developing a school bullying prevention program. This practicum was designed to retrain preschool personnel on the importance of cultural diversity and the teacher's role in developing and implementing a multicultural curriculum. Faculty meetings and workshops were organized to present a cultural awareness curriculum to preschool staff and discuss (cont. next page)

the teacher's role in executing the curriculum. Teachers participated in role-playing sessions on fostering respect for and understanding of diverse cultures, and they participated in developing and evaluating the culturally diverse curriculum. Monthly themes included: ancestors, food, clothing, games, shelter, holidays, transportation, and weather. Learning activities for each of these themes are presented, such as cooking with rice and corn, including chopsticks and woks in kitchen play centers, building igloos, and making hats and vests from different countries. Teachers who participated became aware of their attitudes toward multiculturalism and increased their knowledge of the importance of multicultural curriculum. Children involved in the cultural awareness program developed an understanding and respect for other people. Appendixes include a checklist of culturally diverse classroom materials, assessment instruments, and curriculum outlines. (Contains 29 references.) (JDD)

Journal Announcement: RIEJUN95

A practical curriculum was designed to develop training that would increase teachers' understanding of an integrated curriculum and how to plan for implementation. Subjects were 23 teachers at a K-5 elementary school. Training was developed to provide a common knowledge base of an integrated curriculum, productive collaboration and planning, and understanding of work-behavior styles. The researcher developed and administered pre- and posttests, teacher attitude surveys, and session evaluations; acted as a resource person for team planning for integrating curriculum; reviewed lesson plans; and made classroom observations of curriculum integration. Analysis of the data showed that teachers who participated in the training had a clear understanding of integrating curriculum and how to plan for integrating

curriculum. The posttest results showed mastery of concepts presented in the training, and teacher attitude surveys showed participants felt communication had increased between grade-level team members and between and among grade levels. (A Readiness for Curriculum Integration survey, a curriculum integration assessment questionnaire, and a survey to measure school-wide communication about curriculum are appended. Contains 29 references.) (AA)

A university early childhood laboratory school was making a transition from an academic orientation to one focusing on developmentally appropriate practices. This curriculum was implemented to improve parents' awareness of developmentally appropriate programs by means of workshop sessions. The goal was to increase their knowledge of what is developmentally appropriate in programs for children 3 to 8 years of age. Three workshop sessions were designed to provide participants with information on appropriate and inappropriate practices. This curriculum was provided through video tapes and overhead slides comparing appropriate and inappropriate practices. Each session included a question and answer period to allow for further clarification. A posttest was given at the end of the third session to determine information gained. The results indicated that, compared to the pretest, parents were able to identify more developmentally appropriate practices for children ages 3 to 8. (Four appendixes contain the parent questionnaire, the laboratory school's annual reassessment form, (cont. next page)

the survey pretest/posttest, and consent letter.) (AP)

 Journal Announcement: RIEJUN95
 A study was conducted at Southwest Texas Junior College (STJC) to assess current management practices used by the physical plant maintenance department (PPMD) and to develop a strategic plan for physical plant management. Procedures included an analysis of current management practices and systems that affect physical resources, and periodic and preventive maintenance, and the development of recommendations for the design of a system for expansion and modification of existing facilities and construction of new facilities. A survey designed to determine the adequacy of facilities and services was sent to 141 administrators. Study findings, based on an 88.65% response rate, indicated that STJC needed: (1) a fire safety training program; (2) a hazardous substance training program; (3) a maintenance personnel training program; (4) a space management program; (5) an adequate heating and cooling system; (6) proper application of janitorial services; (7) review of PPMD staffing; (8) better lighting; (9) plans for handicapped personnel; (10) improvement of groundskeeping; (11) improvement of general campus maintenance; (12) a computerized control system; (13) better enforcement of parking policies; (14) coordination between committees; and (15) plans for increased enrollment. Based on survey results and interviews with the PPMD personnel, a master plan for future facilities planning, maintenance, and energy management was developed. The study report contains 92 references, interview questions, campus survey, a control chart for procedural elements of the plan, and current and proposed organizational charts. (KP)

 Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEJUN95
 In an effort to improve the writing performance of non-native English-speaking students in a college preparatory composition course, a project was undertaken to reduce problems of self-esteem caused by communication apprehension through a speech assignment involving critical thinking and peer reviews. To evaluate the effect of the assignment, the Rosenberg Self-Esteem Scale (RSE), the Coopersmith Self-Esteem Self-Concept Scale (PHSC), the Coopersmith Self-Esteem Inventories (SEI), and other self-concept measures were administered to 42 students in the college preparatory class. A lecture was then given on delivering a speech and students selected topics for their own speeches. The speeches were graded by fellow-students and the teacher on content, appearance, eye contact, props, and time constraint. After each speech, strengths and weaknesses were discussed by the class. In the final phase of the project, the self-esteem inventories were re-administered in the last 4 weeks of the course. A comparative analysis of pre- and post-test results indicated the following: (1) in general, students showed increased levels of self-esteem on all the instruments; (2) for the SEI, 38% showed a positive change, compared to 12% showing a decline in self-esteem; and (3) similarly, on the RSE 66.66% of subjects showed positive change, compared to 12% showing a negative change. The report includes speech grading criteria, the self-esteem instruments, and results for each instrument. Contains 12 references. (KP)

Journal Announcement: RIEJUN95

Fifth graders were taught to use an electronic card catalog to retrieve information and materials for class assignments and leisure reading materials. Groups of 10 or 12 students were seen twice a week for periods lasting up to 30 minutes. At these sessions they were introduced to computer components, proper handling, how to log into a network system, and how to search for materials using Boolean terms and keyword searches. The author developed lesson plans to introduce strategies from fundamentals through advanced techniques. Special teaching methods were used to enhance critical thinking. Students also used practice keyboarding machines to help with typing skills, and a tape recorder was available so that they could listen to instructions as they did online searches. The post-test revealed that all these strategies were effective for teaching students to use the online catalog effectively, and the students' ability to have their own work stations contributed to the study's success. Project evaluations revealed the students' preferences for using an electronic database because of the options it allows. Three tables present study data, and eleven appendices contain survey and evaluation instruments, as well as supplemental information. (Contains 31 references.) (Author/SLD)

Journal Announcement: RIEJUNGS
This practicum was designed to increase the number of elementary school students eligible for placement in a gifted program by improving the prescreening process. Major goals were to: (1) improve teachers' ability to identify giftedness in children; (2) improve the referral rate for gifted screening; and (3) increase the identification and placement rate of children into the gifted program to the expected level. A 11st of characteristics of giftedness was developed and a series of meetings with a total of 23 teachers provided training in the recognition of potentially eligible students. A parent workshop was also held to educate parents about characteristics of gifted students as well as the screening, evaluation, and placement process. Analysis of results indicated that teachers made more than double the number of referrals compared to the previous 3 years and that all teachers who received the training made nominations of students for screening. The number of students ultimately qualified approached, but did not reach, the two percent goal. Appendices include the gifted characteristics checklist, a sample screening and evaluation log, and a summary of the identification process.

Language: English Document Type: PRACTICUM PAPER (043). TEST, QUESTIONNAIRE
(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUN95

A problem exists in the lack of assessment coordination between monolingual psychologists and bilingual psychologists when working with language minority children referred for evaluation of special needs. This practicum was designed to improve the psychological assessment coordination between English psychologists and the bilingual psychologist. The practicum involved development of assessment guidelines to be utilized by monolingual English psychologists and bilingual psychologists, explaining the model to school presentation of a workshop.

psychologists, creation of a log to record incoming referrals of children suspected of being language minority, and conducting conferences during which the monolingual English psychologist and bilingual psychologist would determine their respective roles in the assessment process based on the coordination assessment guidelines. Analysis of data revealed that psychologists increased their participation in the evaluation process and they were better prepared to participate in the multidisciplinary team process. Appendices include a coordination assessment form, referral log, and questionnaire on psychological assessment of language minority children. (Contains 32 references.) (JDD)

Improving the Transition Process for Middle School Learning
Disabled Students Reentering the Regular Classroom through
Student Accountability and Teacher Inservice Training.

18 Aug 1994 108P : Ed.D. Practicum Report. Nova Southeastern University.
EDRS Price - MF01/PC05 Plus Postage.
Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

Geographic Source: U.S.: Florida
Journal Announcement: RIEJUN95
This practicum was designed to ensure that junior high students with learning disabilities experience a successful transition back into the regular classroom from the resource room. The focus was on increasing communication between the regular classroom teacher and the resource room teacher, evaluating transition candidates using a competency-based criterion before they exit from the resource room, and establishing support services for the regular classroom teacher and the transition student. The practicum involved the development of a transition procedure as part of the student's individualized education plan, a written communication flowchart, teacher responsibilities (regular classroom and resource room), modified resource room schedule, student profile, possible regular classroom modifications, daily and weekly assessment, and inclusion of regular classroom teachers at special education meetings. Analysis of the data revealed that successful transitioning occurred following the practicum

Implementation. Student improvement occurred in the completion of regular classroom assignments and homework assignments, positive classroom behavior, and passing grades. Appendices contain copies of questionnaires and other practicum project materials. (Contains 22 references.) (JDD)

A Multicultural Awareness Program To Improve Language and Thinking Skills to a Group of Language Deficient Preschool Students.

Altamura, Marilyn T.

18 Jun 1993
118p.; Master of Science Practicum Report, Nova University.
EDRS Price - MF01/PC05 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJUN95

This practicum project exposed seven preschool students with language deficiencies to multicultural experiences and strategies, resulting in improvements in both language and thinking skills. The children were included in a regular preschool program serving low-income families. The program was based on a multicultural awareness curriculum which utilized such teaching strategies as role playing, parental involvement, storytelling, puppet play, cooking, show and tell, and arts and crafts. Language enhancement activities included group size variations, field trips, microphone and tape recorder use, interactive communications, story drawing, picture and story captioning, multicultural literature, and use of big books as part of whole language activities. Vocabulary was introduced through concrete objects, stories, books, games, songs, and activities. This practicum report presents numerous ideas for multicultural learning activities, using the culture of a different geographic area as the theme of each week's activities; areas include Ireland, Africa, Haiti, Jamaica, Dominican Republic, Colombia, Vietnam, Pakistan, Italy, and the United States. A bibliography of 37 items and a discography of 13 items are included. Appendices provide a home language survey, teacher observation checklist, multicultural questionnaire, parent letter, and language and critical thinking skills pre/post-tests. (Contains 14 references.) (JDD)

ED378475 CG025873
Development of a Training Model To Increase Caseworker's Specificity, Clarity of Item Definition and Timeliness in Writing Individual Service Plans for Children in Foster Care.

Eberwin, Carolyn A.

1993

56p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUN95
This paper reports on a practicum designed to teach foster-care caseworkers how to improve the specificity and clarity of item definition on Individual Service Plans (ISPs) for children in foster care. Most agencies require that within 30 days of accepting a child for foster care, agency caseworkers must complete an ISP which establishes goals for the child to meet with the help of his or her foster parents and foster-care agency caseworker. Goals are also set for the child's birth parents in order to prepare for the child's eventual return to the birth-family home. The caseworker must devise the goals in a timely manner, stipulating measurable outcomes, but in one agency noted in the paper, caseworkers set ISP goals that were unclear, difficult to measure, lacking in behavioral specificity. After studying the problem, it was proposed that a two-part program be developed to try to remedy these difficulties. In part one, an Individual Service Plan Evaluation and Instruction Instrument was developed. Then, for part two, an Individual Service Plan Tracking Sheet was used. Workers were trained to use both instruments. Although these measures demonstrated that ISP goals can be written more clearly in more measurable terms, the project's specific goals were not met. (RJM)

ED378322 CEO67898 Development of a Career Student Guide for the Tech Prep Program for Henry County High School.
Winchester, Ruth Ann
Oct 1994
74p.; Doctor of Education Practicum Report. Nova Southeastern University. Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); INSTRUCTIONAL MATERIAL (051)
Geographic Source: U.S.: Georgia
Journal Announcement: RIEJUN95

This practicum report describes the research conducted in preparation for developing a career student guide to acquaint students attending Henry County High School (HCHS) in McDonough, Georgia, with the school's new tech prep program. Chapters 1 and 2 contain background information about HCCHS' tech prep program and a review of literature regarding considerations in developing student guides and marketing tech prep. Chapter 3 explains the procedures used to conduct the literature review, interview representatives of other tech prep programs, and formulate the criteria used in developing the career student guide. Chapters 4 and 5 discuss the key findings and implications of the literature review and interviews. Appended are lists of programs contacted for the study, the guide development criteria, and the career student guide, which includes the following: overview of the tech prep program; high school graduation requirements; tech prep requirements; HCCHS program clusters; community/technical school clusters; tech prep options and process; and 4-year course sequences for the business management, mechanical, and health/human services tech prep programs; and information about Dekalb Technical Institute, which is the postsecondary institution involved in HCCHS's tech prep program. Contains 15 references. (MN)

QUESTIONNAIRE (160)
Geographic Source: U.S.: Florida
Journal Announcement: RIEMAY95

Target Audience: Teachers; Administrators; Practitioners
This practicum was designed because out of school suspensions as a disciplinary procedure were not effective in changing students' behaviors. The students felt angry and rejected by the teachers, and they did not feel part of the school culture. The practicum offered a peace curriculum designed to be used in content academic areas small groups, and with mentors. The study involved a peace curriculum that included problem-solving activities that encouraged students to develop alternatives to oppositional, defiant, and disruptive behaviors. The peace curriculum offered students the opportunity to participate in class discussion without the fear of failure. By preventing behaviors that emerged when students became frustrated because they did not know how to control their behaviors, the peace curriculum offered students the opportunity to develop fair and just attitudes. Analysis of the data revealed that out of 292 students referred for discipline, more than 83 students received an alternative form of discipline rather than out of school discipline or suspension. The cumulative number of out-of-school suspensions received by exceptional education students was reduced. The number of classroom teachers implementing behavior strategies in their classrooms increased because of the introduction of the peace curriculum. Nine appendices conclude the paper: (1) discipline system student listing; (2) teacher survey; (3) disciplinary referral form; (4) student assistance team response form; (5) lessons for mentors; (6) lessons for small groups; (7) content specific lessons for the classroom teacher; (8) mentor survey; and (9) rules for small group instruction. Contains 38 references. (Author/DK)

Journal Announcement: RIEMAY95

This practicum designed and implemented a staff training process to help lead teachers in a school-age child care setting improve their supervisory skills and responsibilities in order to improve program practices. The coaching project covered three stages: preparation for coaching, the coaching sessions, and evaluation of the project. Lead teachers attended a series of meetings to prepare for coaching by developing coaching skills, focusing on presentation of research, demonstrating conferencing skills, and giving feedback and support. They then engaged in coaching sessions with each other at their program sites and with at least one additional teacher among their site staff. Staff members recorded evaluations of the coaching process at each session and at the conclusion of the sessions. Project evaluations indicated that the lead teachers gained an understanding of the supervisory process in a school-age child care environment and that coaching can be used successfully to produce more reflective program practices among lead teachers and site staff. Eight appendices include a description of the lead teacher position, a summary of the pre-training interviews, coaching session data, and a schedule for implementing training of lead teachers as supervisors using coaching. Contains 35 references. (Author/AP)

This practicum designed and implemented a program to assist

child care centers in acquiring substitute staff on a consistent basis. The steps to develop a pool of trained substitute staff and establish a network between the participating centers were: (1) collecting information by way of a questionnaire; (2) obtaining funds; (3) discovering which centers were in need of this type of service and were willing to participate; (4) hiring and training the prospective substitutes, and (5) developing a contract. At the end of the project, it could not be determined how effective the pool system was for the participating centers. However, one goal achieved was that of networking among the participating center directors. (Seven appendices include sample evaluations, job descriptions of the substitutes, the contract for participating centers, and the 10-week project calendar.) (BAC)

Journal Announcement: RIEMAY95

Middle school students are failing to connect what is learned in computer classes to other subject areas of the school's curriculum. Teachers, who often lack basic computer knowledge, are not encouraging computer use, and a lack of computer accessibility and appropriate software compound the problem. A practicum was designed to: (1) move the school's computer lab to a more accessible area; (2) conduct teacher inservice training in different aspects of technology and its application to various subject areas; (3) write grants for additional computers; (4) review and rewrite middle school technology curriculum; and (5) establish cooperative and peer tutoring groups within the computer lab. After implementation, computer lab utilization (hours used) by students and teachers increased 30%. Four out of 16 grants written were approved (a 400% increase), and students demonstrated an average competency skills rating of 75%. The training was (cont. next page)

well-received by the staff and their technology use skills increased. Eight appendices include a staff questionnaire related to educational technology, student post-tests, teacher evaluations of inservices, a map of a proposed move of the computer lab, agendas for inservice training, a checklist of observations in the computer lab, the technology curriculum, and the administrative response to inservices. (Contains 16 references.) (MAS)

A Computer Literacy Course for College Level Graphics
(Commercial) Art Majors.
Myers, Deborah Rose

17 Oct 1994

117P.; Educational Specialist Practicum, Nova University.
Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcements: RIEMAY95

In this practicum, a curriculum is developed for a course in computer literacy for freshmen students in the department of Visual Communications of a private college in south Florida. The target group is 21 students out of a class enrollment of 50 used to decide the effectiveness of the course. Objectives for these students were that they would: (1) score at least 70 percent on an instructor prepared post-survey for computer literacy, a criterion-referenced instrument to assess students' computer literacy; (2) be able to demonstrate a set of skills as observed by the instructor and checked off on a checklist; (3) be able to use the computer graphics drawing program to create a final project, as observed by the instructor and recorded on an observation check-off list. A fourth objective for the practicum was that four Visual Communication teachers at the site would evaluate the curriculum to determine if it has met specific criteria as stated in the outcome objectives. Objective 1 was not completely met. During the course four students dropped out, and of the remaining 17, 12 (94.1 percent) passed the criterion referenced instrument. The practicum did meet Objectives 2, 3, and 4. Appendixes contain forms, correspondence, and instruments from the project as well as practicum results. (Contains 24 references.) (JB)

Journal Announcements: RIEMAY95

This project developed and tested an objective instructor assessment instrument to measure competencies of instructors who train Florida's child welfare and juvenile justice staff. Data from the literature review were used to identify and rank effective teaching competencies. A competency based instructor assessment scale was then developed using a behaviorally oriented rating scale approach in a format that would allow instructors to self-evaluate their classroom skills. The scale's criteria measure the knowledge, skills, and attitudes deemed necessary to conduct effective training. These criteria were extracted from the instructor competency categories of the International Board of Standards for Training, Performance, and Instruction. A formative review of the instrument was conducted by a five member committee that consisted of two senior trainers, two training administrators, and a training specialist. The draft instrument was then further refined and subjected to preliminary field testing. Results from the field test indicated that four raters had no difficulty using the instrument to rate two certified and two uncertified instructors. The assessment instrument was submitted to the Professional Development Centers headquarters and is being administered to all trainers during the certification process. Appendixes contain instructor competency categories, competency survey results, and the draft evaluation instrument. (Contains 18 references.) (JB)

Journal Announcement: RIEMAY95

A practicum was designed for students, faculty, and administrators in an urban elementary school to acquire an increased understanding of other cultures. The practicum setting was a library media center with a student population of 1,205. Two inservice training workshops to inform staff members about the numerous cultures of their students (63% Hispanic, 23% Black, 7% White, and 7% Asian) and the differences in the learning style preferences of students of different cultural groups were conducted; new multicultural books were purchased with a state grant; two fundraising book fairs were held; "Booktalks" were given to teachers and students; pretesting and posttesting of students' multicultural knowledge was administered; books and materials checked out of the library were logged; a questionnaire of teachers' multicultural activities was administered; and a report was obtained from the school principal. Results indicated that: (1) all 55 faculty members implemented multicultural curriculum units in their classes and used learning activities to suit cultural groups; learning style preferences; (2) students in grades 4-6 demonstrated significant gains in knowledge of the history and culture of different cultural groups; (3) the portion of books and materials with multicultural content checked out of the library increased significantly; and (4) no negative interactions between students of different cultural groups were reported to the principal during the last month of the practicum. (Contains 29 references and 8 tables of data. Appendixes present a paragraph from the state monitoring review on multicultural education; data on books checked out of the library; a sample teacher's form to report multicultural activities; examples of four "culture quizzes"; a checklist; and the principal's report.) ED377442 CS011904 A Classroom-Home Library: Supporting the Emergent Literacy Children through Parental Involvement.
Lauer, Lisa M.

1994 81p. : Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAY95

A practicum was designed for parents to acquire the understanding, skills, resources, materials, and wherewithal to support the emergent literacy development of their young (preschool) children. A "Home-School Library" was established for students to have developmentally appropriate books available for parents to read to their children at home daily. Literacy workshops were conducted demonstrating activities and the importance of parents upon the emergent literacy development of their young children. Parent-child activities involving literacy were held in the classroom to enhance parental involvement. Written and oral surveys of the students (about 20) and their parents were conducted to determine the literacy needs of both groups. Results indicate that parents did not have the wherewithal to support the emergent literacy development of their young children. Analysis of data after the implementation had been completed revealed that: (1) parents had a variety of books available to read to their children daily; (2) the number of parents reading books to their children daily increased; (3) the number of parents participating in parent-child activities in school had increased; and (4) the number of parents indicating that they felt "more confident" reading to their children increased. (Contains 39 references and one table of data. Appendixes presents survey instruments, parent comment sheets, bookmarks, and the texts of a story and a song.) (Author/RS)

Journal Announcement: RIEMAY95
A lack of adequate substance abuse information at an elementary school prompted this practicum examining at risk students. Classroom guidance lessons on substance abuse prevention were given, which included small group counseling sessions regarding self-esteem and problem-solving skills, followed by posttests. Classroom guidance lessons revealed a need for prevention programs which imparted knowledge about the use and consequences of alcohol and substances. The self-esteem small group sessions showed that students responded positively to assertiveness training and social skill enhancement. Students also benefitted from talks about responsibility, self-discipline, and good judgment. Participants indicated a need for all students to join in drug awareness and a desire for more small group counseling sessions and classroom guidance lessons regarding the issues of substance abuse prevention. Parents reported that they felt excluded from their children's substance abuse programs. It was concluded that comprehensive school substance abuse prevention programs should include lessons for students regarding feelings, pharmacology, and self-awareness, as well as involve parents. Students who completed posttests on substance abuse prevention, self-esteem, and problem-solving skills performed perfectly. Contains 18 references. (Three appendices list all three posttests.) (RJM)

The teaching of positive or alternative discipline techniques to the legal family, who work toward having their (cont. next page)

children returned to them, does not currently occur at the private foster care agencies with which the children are placed. Therefore this practicum has been implemented to address this need. The children moving from the foster care system back into their legal homes require stability in many areas, including discipline. This refers to teaching disciplinary techniques other than spanking or corporal punishment. A program was proposed for legal families to become familiar with alternative discipline practices used by many of the foster parents within the foster care agency. The word "alternative" is used to imply techniques other than spanking. The practicum project was to teach and make available to legal families and care-givers positive and alternative discipline techniques by meeting with the parents at a convenient location and designing a curriculum. A pre-test and a post-test were used to measure knowledge of alternative disciplines, knowledge of support groups and persons within their communities, and any increase in confidence the legal family may have gained. ED377336 CEO67762 Marketing and Early Intervention Strategies To Increase Female Enrollment in Technology Education.
Maehrlein, Joyce J.

Apr 1993
182p.; Doctoral Research Project, Nova University.
EDRS Price - MF01/PC08 Plus Postage.
Language: English

Document Type: DISSERTATION (040); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; New Jersey
Journal Announcement: RIEMAY95

A series of marketing and early intervention strategies were developed to increase female enrollment in technology education (TE) in a New Jersey township with residents of all social classes/income levels. Among the main project activities were the following: (1) development of a comprehensive curriculum intervention called Technology Education for Lifelong Learning Skills (TELLS), which focused on implementing interdisciplinary gender-neutral technological problem solving in the classroom; (2) presentation of an evening program to increase interest in TE among fifth graders and their parents; (3) organization of a TELLS conference to disseminate information about the curriculum; and (4) development of new curriculum materials, business/technology newsletters, and public relations presentation materials for grades 9 through 12. The initiatives resulted in an increase in female enrollment from 10% to 12% in the grade 8 technology

elective course; however, female enrollment in TE in grades 9-12 remained at its previous level (9%). It was concluded that the project was not long enough to bring about the changes in student, teacher, and counselor attitudes required before female enrollment in TE increases significantly. (Contains 45 references. Appended are the following: project survey instruments, information about TELS grant activities and personnel, and sample public relations materials and learning activities.) ED377115 S0024437 Alternative Teaching Strategies To Improve Instrumental Lesson Instruction at the Middle School. When the Budget Has Been Reduced.
Greaser, Thomas C., Jr.

1994
92p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR95

Target Audience: Teachers; Practitioners
A middle school student helper teacher program based on some cooperative learning tenants provided alternative instruction to sixth grade instrumental students in music lessons that would have been severely curtailed due to budget reductions and increasing enrollment. Students were grouped on like instruments and divided into subgroups by ability. Each group received practice reviews and instructions from seventh and eighth grade volunteers with the instrumental teacher providing individual help, evaluation, and group instructions. Student helper teachers received training in monthly after school meetings about their problems and concerns with their groups. The results indicated that the students spent more time on task than they would have in a traditional setting. Analysis of skill development revealed that student lesson progress was similar to traditional instruction. Other positive benefits were attitudes among the students of helping instead of competition and increased learning and problem-solving activities of the student helper teachers in preparing for and dealing with their groups. Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR95
This practicum sought to address the need for increased opportunities for prospective adoptive parents to gain introductory knowledge regarding adoption issues and processes in a rural state in the northeastern United States. A multimedia educational unit containing a 45-minute videotaped presentation and various written materials were developed and produced. Limited advertising was utilized to inform the public of the availability of the unit, which was mailed to 13 prospective adoptive parents who inquired about it. Parent evaluations of the unit indicated that most prospective parents believed that they had gained significant information from the unit, and felt that it was a valuable tool for prospective adoptive parents. Two appendices contain parent survey questionnaires. (MDM)

Journal Announcement: RIEAPR95

This practicum was designed to set up a training/mentoring program to assist five state-licensed/certified family day care providers to successfully complete the formal application process of the National Association for Family Day Care (NAFDC) and receive NAFDC certification. The major goals of the practicum were: (1) to have five providers become the first in their state to receive NAFDC certification; (2) to have all providers finish the application process; (3) to have all the providers meet NAFDC standards for safety, health, nutrition, learning environment, interacting, outdoor play environment, and professional responsibility; and (4) have three of the providers become future trainers/mentors for family child care training. Twenty family day care providers were interviewed for the program, with the five strongest candidates selected to participate. The five providers received 12 weeks of training and mentoring to assist them in the NAFDC accreditation process. Four of the providers finished the training program and completed the application process, with all four agreeing to become trainer/mentors for future accreditation sessions. Three appendixes contain checklists of provider responsibilities for accreditation, assessment profile criteria, and agreement to become national accreditation trainers. Contains 13 references. (Author /MDM)

ED376927 PS022531 Facilitating School Transition through Effective Characterization of Skills and Collaborative Planning: The Elementary and Middle School Child.
Gallagher, Vicky A.

1994

125p.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC05 Plus Postage.
Language: English
Document Type: PROJECT DESCRIPTION (141)
Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR95

At a small, northeastern suburban elementary school, the records used to characterize the skills and to anticipate the needs of the diverse students in transition (between grades, (cont. next page)

school levels, or special to regular education programs) did not provide receiving teachers an effective assessment of current performance levels; nor was there adequate planning to facilitate student transitions. This practicum developed strategies to ensure greater success during periods of transition. One component was training initiatives to enable teachers to better assess student performance levels (especially using portfolios) and to deal effectively with special education needs. A second component expanded collaborative planning opportunities so teachers could work together, sharing ideas and expertise, to facilitate school transitions for students. Positive outcomes of the initiative were demonstrated by inclusion of individual education plan summaries and performance assessment data in student cumulative records. An informal survey of teachers revealed that the initiatives improved staff awareness of student strengths and needs, and increased support for orientation activities and participation in the transition planning process. Includes 16 appendices (survey forms; training and planning materials; evaluation and assessment forms; and survey results) are included. Contains 70 references. (TM)

The Development and Implementation of Training Workshops Directly Related to Programming for Daycare Directors in Northern Canada.**
Beckman, Sandra
1993
118p.; M.S. Practicum Report, Nova University.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR95
Daycare directors in northern Canada, with little or no post-secondary education, face the difficulties of programming for children from diverse cultures. Directors often feel isolated in their small communities, and a lack of programming expertise and early childhood development training for them has become a concern. This practicum designed, implemented, and evaluated a three-part strategy for training daycare directors. First, an initial visit focused on evaluating existing programs and targeting areas for improvement. Second, a one-day programming workshop presented material relevant to

each director. The workshop was approximately 6 hours long, during which participants were introduced to a programming method intended to develop the social, physical, intellectual, creative, and emotional aspects of the child. Third, follow-up visits provided feedback to each director and reinforced curriculum programming strategies. Both on-site visits ranged from 3 to 6 hours. The program was evaluated by means of the directors' newly acquired ability to use brainstorming, curriculum webbing, and flow charts for thematic units. Evaluations of workshops indicated that the participating program directors met the goals of the workshops and were receptive and enthusiastic to the strategies and programming ideas presented. (Six appendices contain surveys, evaluations, and workshop materials. Contains 28 references. (TM))

This practicum involved the design and implementation of a 4-station computer learning laboratory to enhance the academic learning gains of two hearing impaired, two hearing impaired, and two dyslexic students at the Gainesville (Florida) Job Corps Center. The learning laboratory was equipped with computer hardware and software to perform the functions of human surrogate readers, writers, and interpreters. Students were followed while preparing for the General Education Development (GED) examination. Students were given two simulated TABE (Test of Adult Basic Education) tests and a (cont. next page)

mock GED examination over the course of 4 months. The group that used the sensory-bridging equipment as an alternate modality scored significantly higher than their control counterparts. Appendices include a program brochure, results of reputation and evaluability assessments, budget information, and detailed results of the simulated tests. Contains five references. (DB)

Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR95
A practicum was developed to increase the number and success rate of junior Honors English students--63 students who were 62% Latino and 38% African-American--taking the English Advanced Placement (AP) examinations. Test strategies that were designed to allay students' innate fears about tests in general and specifically about English language and literature placement tests were taught. Also taught was style analysis of language and literature. As motivation for test success, academic pep rallies were held in the classroom in the same manner as athletic pep rallies. Other key elements that contributed to student success were the daily collaborative learning groups and motivational guest speakers in the classroom. Outcomes were positive. Not only did the number of juniors taking an exam increase, but the students also demonstrated more confidence in themselves as English students and test takers. Teachers involved in this practicum found that early intervention and the empowerment of students with skills and strategies germane to AP exams were critical for their success. An epiphany was realized by many students in the target group before the practicum's end. Much to their surprise, they found that they enjoyed reading, analyzing, and writing about literature. (Includes two tables of data; contains 26 references. Appendix A consists of a 21-item questionnaire for juniors and seniors; Appendix B consists of a literary style analysis pre/posttest). (NKA)

A practicum was designed to improve the internal and external editing skills of high school students so that their papers would reflect thought and care. The target population was 67 regular level tenth grade English students in a predominantly middle class high school in southeastern Florida. A combination of strategies were used to improve writing and revision, such as: (1) meaningful assignments in lieu of artificial expository formats; (2) process journals; (3) trained peer response/editing groups; (4) open-ended responses; and (5) word processing for editing. Data analysis revealed the students' improved attitudes towards both writing and revision, as well as improved grades on writing assignments. (Contains 31 references; appendixes are a questionnaire concerning the student's pre-writing process and a questionnaire on sentence stems.) (NKA)

Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR95
Second-grade students at a public school in an upper middle class neighborhood had received minimal guidance in the

writing process and in self-evaluation of writing progress. In addition, the students did not have the opportunity for meaningful writing daily. A practicum was designed which addressed these problems through the use of portfolios. A teacher-made survey elicited the information that 75 of the 125 students did not like to write; teachers were also surveyed. Workshops explaining the importance of the writing process and how to teach it were presented to the second graders. The workshops provided information about the writing process, peer conferencing, writing centers, modeling the writing process, and writing workshops. The practicum developer served as a resource person for the other second grade teachers and assisted them with setting up writing centers in their classrooms and with the development of student portfolios. Results of the practicum were positive. Analysis of the data revealed that the teachers understood and taught the writing process and that the students showed increased growth in using the writing process and in self-evaluation of their writing growth. (Contains 30 teacher interview questions.) (Author/NKA)

A practicum aimed to increase academic competence in math and/or reading and to improve study skill: of 27 at-risk students referred by their classroom teachers to the school resource specialist. A before-school peer and cross-age tutoring program for at-risk students was developed. Protégés were monitored on the usage of the following study skills: bringing the proper materials to class, returning homework on time, attending to tasks, and completing class work. The program coordinator presented mini-lessons that centered on (cont. next page)

strengthening weak subject and skill areas. Follow-up activities were facilitated by the coordinator, tutors, and assisting teachers. Students completed school assignments in tutoring sessions by using manipulatives and technology. Practicum results were positive. Posttest scores of the Numbers Test for math development and the Protege Reading Test measuring reading improvement were improved from pretest scores. A teacher survey reported improved study skill usage, as well as improved skills in reading/language arts and mathematics. Report card grades were higher at the close of the intervention. Findings suggest that a supplementary cross-age and peer tutorial program is an effective strategy in addressing the varied needs of the at-risk student. (Contains four figures and eight tables of data; and 17 appendixes of forms, surveys, tests, letters, guidelines, and survey results.) (SR)

ED376442 CS011884
Improving the Literacy Growth of Second Grade Students through the Use of Whole Language, Peer Tutoring, Cooperative Learning, and Computer-Based Instruction.
Meroney, Barbara
1994

A practicum addressed the problem that the traditional Chapter 1 program of a school district had not been effective in promoting literacy growth. The students repeatedly read the same stories with equal lack of success each time. They were not motivated to read or write because the purpose was irrelevant and failure was probable. The strategy used with 22 students in one classroom was to combine research-based whole language approaches with cooperative learning activities, peer tutoring experiences (as tutors and tutees), and computer-based instruction. Learning styles and needs were met while students increased their ability to learn and think critically. Results from the Diagnostic Achievement Battery, reading running records, writing samples, checklists of teacher observations, personal evaluations, and surveys reveal that the students showed notable development in literacy growth. Findings suggest that the planned program of instruction helped the students improve literacy growth with

confidence. (Contains 97 references, 7 tables, and 6 figures of data. Appendixes present the writing rubric, checklists and survey instruments, and examples of story mapping and story circle diagrams.) (RS)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR95
A practicum targeted a need to develop and improve student attitudes toward reading for fun and pleasure. The target group was 30 second-grade pull-out Chapter 1 reading students identified as primarily non-leisure-time readers based on a student/teacher interview questionnaire. A pre- and post-reading attitude survey was administered. Parents of students were also surveyed. A book check-out record procedure was implemented. "Reading Buddies" (instilling a desire to read through mentoring and modeling of the target group participants) was utilized, and reading resources of children's literature (including read along audio tapes and videos) were compiled. Results indicated that: (1) books checked out by the target group almost doubled even though six students did not complete the treatment; (2) target group students who completed the treatment reported reading almost three times as many books; (3) percentile pre- and post-reading attitude test results reflected significant increases in both recreational and academic reading; (4) parent pre- and post-survey results reflected an increase in observable behavioral changes in target group students' participation in reading related activities. Findings suggest that the treatment was successful and can be applied to other elementary school settings. (Contains 26 references and 5 tables of data. Appendixes present survey instruments, data, "Reading Buddies" guidelines, and a sample (cont. next page)

 The Family Resource Center (FRC), a recent concept in school-linked services, features a holistic approach to family-school-community collaboration. This practicum addresses four objectives: (1) to document baseline data on original FRC clients; (2) to develop a system for on-going case management facilitation; (3) to identify areas of effectiveness and impact of FRC function on clients and the service delivery system; and (4) to increase public and professional awareness of "what works" in this school-based setting. A service history document, a client/participant survey, and a service provider survey for this study were developed. Forty-nine clients answered surveys while twenty-two service providers responded to questionnaires. Data analysis revealed five conditions: (1) cultural differences in initial client referrals to FRC services; (2) grade level variance in type and volume of need category services for at-risk clients; (3) satisfaction and usefulness indices of FRC efforts for recipients and providers; (4) documentation of systems change within the human service delivery systems; and (5) indicators of FRC impact on client behavior. The FRC has the potential to stimulate the development of a community infrastructure for the support of children and families. Five appendices feature copies of client service record, a survey, and demographic forms. Five tables present some of the statistical distributions. Contains 10 references. (RJM)

 Journal Announcement: RIPEAPR95
 This practicum sought to understand why students in a Diversified Cooperative Training (DCT) program did not see the need to earn good grades or to complete their high school education. One hundred DCT programs were surveyed statewide, and it was found that 66 percent reported problems with student attendance, 35 percent stated that some students were classified as at-risk. A program was then implemented for ninth- through twelfth-grade DCT students who were identified as at-risk by the full service school team. The solution incorporated community leaders and employers as mentors. Students met with their mentors each week and participated in planned activities. The students' performance was then measured by comparing fall semester grades with spring semester grades following program implementation. Students' grades increased. They failed fewer courses and their time on task increased as a result of better attendance. Nine appendices include charts which compare grades, attendance, and the total students completing the twelfth grade for successful graduation. Many students also attended Chamber of Commerce meetings, social functions, or other types of business interactions as guests of their mentors. The recommendation is that mentors and at-risk teams be used to improve students' attendance and academic performance. (RJM)

The Implementation of an Academic Advising Program To Prepare the High School Student Athlete for College.

Goldman, Brent

Feb 1994

67P.; Master's Practicum, Nova Southeastern University. APPENDIX B contains broken print and will not reproduce well.
EDRS Price - MF01/PC03 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEMAR95

This program was developed and implemented to help prepare the members of a high school football team for the academic expectations of college admission. The program had three goals: (1) to insure that student athletes took proper college preparatory classes during high school; (2) to provide evaluation and tutoring for the students; and (3) to insure that student athletes were prepared for the SAT. First, an appropriate academic program for each member of the team was created, through a series of small group and one-on-one meetings between the student athletes and the school counselor, with NCAA (National Collegiate Athletic Association) admissions criteria used as the foundation. Second, an early morning study hall was implemented for all athletes with a grade point average below 2.5, with a teacher and students present to provide tutoring with the goal of raising the average GPA to 2.5; the goal was surpassed with a team average GPA of 2.8. Third, junior and senior athletes attended a 9-week SAT preparatory class. Fourth, the students' academic progress was monitored each week through the use of forms completed by their teachers. Only one player was lost to inadequate grades at the end of the first marking period. Teachers reported that the student athletes as a group improved their academic and social skills during the 9-week implementation. In summary, the program's major objectives were met with dramatic improvement in the area of academic achievement. Includes 5 appendixes providing information and sample forms on NCAA requirements, individual transcript evaluation, weekly progress report, and student athlete contract. Contains 21 references. ED376262 UDO30176 Using Rap Lyrics To Encourage At-Risk Elementary Grade Urban Learners To Read for Pleasure.

Morrow-Pretlow, Tharyll W.
1994

55P.; Ed.D. Practicum, Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: Florida

Journal Announcement: RIEMAR95

This practicum was developed to encourage the at-risk urban elementary school student to read for pleasure daily. Participants listened to their favorite rap songs, wrote lyrics for their own rap songs, and then read the lyrics as a text. The practicum was performed in a neighborhood community recreation center that serves urban students from local elementary schools receiving Chapter 1 services and funds. Fifteen students from grades 2 through 6 were identified as at-risk and targeted for the program because: they were at least two grade levels below national norms. Interviews with these students indicated that they did not enjoy reading or writing and never did either for pleasure. A review of the literature had suggested to the author that rap music might provide a key to literacy for these students. After writing their songs, students were asked to retell their messages and to read a self-selected book relating to their personal raps. For a variety of reasons, only 6 of the 15 completed the program, but students who did complete the program showed increased pleasure in reading. Increased reading proficiency was reflected in the grades of five of the six. Two appendices contain the student survey and interview questions. (Contains 32 references.) (SLD)

Journal Announcement: RIEMAR95
A practicum, carried out at a Head Start program in a large southern United States school district, was designed to use inservice training and print and video resources to help Head Start teachers and parents become more knowledgeable about the Head Start Policy Council (HSPC), which involves parents in the decision making in the Head Start program. It was well documented that teachers and parents were not well-informed about the Policy Council, which meant that the local program was out of compliance with the Head Start On-Site Program Review Instrument (OSPRI). Five expected outcomes of the program, reflecting increased teacher and parent knowledge and involvement, were defined; these outcomes were assessed by OSPRI criteria, a teacher questionnaire, results of HSPC elections, attendance at a first meeting, self-assessment results, and an informal telephone poll of parents. Teachers were given inservice training, which familiarized them with research about parent involvement in education and HSPC; they also received monthly follow-up training materials to develop a permanent resource file. Parents attended meetings and received a core parent handbook and additional print information. Analysis of quantitative data revealed that the project goal was attained; teachers and parents did become more knowledgeable about the HSPC, and parents were more involved in the HSPC. (Six appendices include questionnaires and agendas for training sessions and meetings. Contains 15 references.) (TM)

ED375966 PS022788 Increasing Parental Involvement by Motivating Parents of Fourth and Fifth Grade Students To Become More Meaningfully Involved in Children's Education.
Morrison, Michelle T.
Jan 1994
65p.; M.S. Practicum Report, Nova University.

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR95
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

A practicum sought to improve the quality of involvement of fourth- and fifth-grade parents in a southeastern United States elementary school. Despite indications of active involvement in some school events, parents were not involved in student education in a way that affected academic performance. Three outcomes for the 13-week project were

defined: (1) increase active parent involvement from 50 to 80 percent; (2) improve parents' attitudes toward involvement by educational time spent at home with children. Strategies for improving parent involvement included nontraditional homework, parent-child performance activities, parent education classes, and a school-based parent resource center. Measurement devices used to assess these outcomes included comparison of parent surveys, return rates of homework assignments, and parent attendance at program activities. According to these measures, all the program objectives were met successfully. (Appendices include newsletters, correspondence, handouts, surveys, and tabulations of results. Contains 21 references.) (TM)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR95
This practicum was designed to provide expertise to five child development associates and ten teacher assistants working in two preschool programs for migrant children. Emphasis was on the enhancement of program-related planning, curriculum development, curriculum implementation, and reporting skills. Weekly inservice workshops were developed and presented, in accordance with an agenda that incorporated praise for accomplishments, discussion of blunders, new action planning, follow-up, personal and professional development, and training sessions. Interviews, classroom observations, and school records were consulted to determine the effectiveness of the intervention program. The results indicated that the child development associates and teacher assistants were more able to complete school district and program-required paperwork with greater accuracy than before the intervention. The participants also reported feeling more comfortable in the classroom and less intimidated by classroom visits from the program administrator. (Two appendixes contain copies of the (cont. next page)

Classroom evaluation form and survey of job description awareness. Contains 24 references.) (MDM)

Geographic Source: U.S.: Florida
 Journal Announcement: RIEMAR95
 This practicum sought to provide a model for a local affiliate of the Girl Scouts of the USA, offering a developmentally appropriate curriculum for inner-city kindergarten-age girls at a community recreation center. A hands-on training program was developed and implemented with a group of community volunteers. Program activities were designed to allow girls to choose activities within the framework of the recreation center. Books, stories, songs, and games were used to teach the girls the abstract concepts behind the philosophy of the Girl Scouts organization. Interviews and questionnaires were used to assess the effectiveness of the program. The results of these assessments revealed that the program produced mixed results. Although the number of girls participating was not as high as expected, the data revealed that the seven girls who completed the program possessed a clear understanding of the philosophy of the Girl Scouts and were interested in continued involvement. However, frequent changes in volunteer leadership and ineffective coordination with the recreation center adversely affected the program. (Four appendixes contain the Girl Scout Promise and Law, a participant questionnaire, a participant interest survey form, and a weekly report form of meeting activities. Contains 53 references.)  Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.: Florida
 Journal Announcement: RIEMAR95
 This practicum sought to provide elementary school teachers with the skills and knowledge needed to teach students residing in foster care. The three specific goals of the practicum were: (1) to have all 30 of the teacher participants use teaching strategies appropriate to the education of foster care children; (2) to have at least 25 of the 30 teachers use at least 3 intervention strategies before referring a foster child for behavior problems; and (3) to decrease the number of foster care children referred for special education assessment. Inservice teacher training sessions were developed and conducted to achieve these goals. Teacher appraisal worksheets, behavior referrals, and suspension charts were used during the implementation phase to document the teachers' growth. A post-intervention assessment was completed by teachers to document their understanding of the needs of foster children. Analysis of the assessment data, classroom observations, and school records indicated that all three goals of the practicum were met. (Two appendixes contain strategies for healthy preschool and school-age child development and suggestions on how teachers can help children cope with stress. Contains 41 references.) (MDM)

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160) Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR95

A practicum was designed to increase the lines of positive and effective communication between parents and teachers in a preschool setting. Poor parent-teacher communication (due to lack of knowledge or experience) was documented. The program sought to improve communication regarding the child's developmental and personal progress. The 8-month program consisted of staff meetings, six cooperative parent-staff workshops, monthly newsletters, and parent participation in school programs. Implementation topics included academic appropriateness, developmental landmarks, discipline, Montessori philosophy, self-esteem, and stress. Evaluation (based on observation, feedback, topic review, and a survey) showed that providing parents and staff a joint educational experience in the form of a workshop increased their knowledge base and enhanced the parent-teacher relationship and communication between home and school. Parents and staff increased their ability to communicate comfortably and effectively about children's issues. (Four appendices contain surveys and topic reviews. Contains 18 references.) (TM)

Journal Announcement: RIEMAR95

An increase in verbal and physical encounters among elementary students led to the implementation of a conflict resolution program to assist teachers and students in solving interpersonal problems. The project was implemented over 8 months in grades three through five in a private elementary school. The goal of the project was to teach students and teachers to use more effective mediation skills when solving

conflicts with peers. To achieve its goals, the program focused on communication skills, practice in problem-solving strategies, and exposure to techniques in cooperation and affirmation. The expected outcome was that 8 of the 10 teachers in need of training would develop an understanding of conflict resolution strategies, and 40 of the 50 students would begin using conflict resolution strategies to solve their problems. Outcomes were measured through analysis of results of pre- and post-implementation assessments. As a result of the program, all 10 teachers developed an understanding of effective conflict resolution strategies, and 46 of the 50 students reported the use of conflict resolution strategies. (Appendices include faculty and student assessments, a teacher training packet, student mediation activities, and the letter to parents. Contains 21 references.) (SWW)

A practicum was developed and implemented to address the developmental and intellectual delays in primary students in a Georgia elementary school. The program's need resulted from the identification of 18 to 21 percent of the kindergarten and first-grade level students as developmentally delayed or academically unprepared for their grade placement. Because the literature suggests that school-based teacher support teams are successful in assisting teachers and students with learning problems, the following three strategies were developed to address the needs of these students: development of a plan to improve curriculum goals that address the developmental and intellectual needs of students in these grades; development of appropriate assessment criteria; and development of a Student Support Team (SST) procedure for (cont. next page)

Journal Announcement: RIEMAR95

A training program was implemented for teachers to increase the quality and quantity of developmentally appropriate multicultural education for 2-year-olds at a child care center in which the children and teachers were predominantly Euro-American. The 10-week training program used readings, videos, discussions, and guided imagery to: (1) raise teacher consciousness about how cultural values and ethnic perspectives affect teaching style and content; (2) to improve each teacher's ability to devise and deliver a multicultural curriculum; and (3) to increase teacher understanding of how 2-year-olds arrive at racial awareness, attitude, and identity. Program outcomes were evaluated using pre- and post-training questionnaires, teacher and parent surveys, ratings of classroom environments, and journal entries. Results indicated that teachers' awareness of their attitudes toward race increased, and classroom environments underwent significant change. (Thirty-one appendices include staff and children descriptions, rating scales and teacher responses, surveys and journal excerpts, lesson plans, and classroom photographs. Contains 32 references.) (TM)

Journal Announcement: RIEMAR95
This practicum was designed to strengthen preschool and elementary school teachers' abilities and commitment to working with parents and including them as active participants in the education of their children. It sought to help teachers identify beliefs about involving parents in the classroom and school, and to develop materials and activities to be used in staff development forums that could assist teachers in acquiring skills for working with parents. A program of teacher workshops, activities, and handouts was developed and implemented. Pre- and post-intervention surveys and interviews were conducted to determine the effectiveness of the program. An evaluation of the survey and interview results concluded that the overall effects of the intervention were positive. Teachers increased their awareness of beliefs concerning parent involvement and increased their readiness to reach out and involve more parents. Supervisors reported that teachers improved relationships with parents and that parents exhibited more positive attitudes towards collaborating with teachers. Parents indicated that the practicum addressed a perceived need. (Six appendixes contain teacher workshop agendas, the parent interview survey, a materials evaluation checklist, teacher survey, and a supervisor interview form. Contains 68 references.) (MDM)

The Development of a Faculty Development Workshop on Computer Access to the Internet. Revised.
Cunningham, Pearley

Sep 1994

58p.; Ed.D. practicum report, Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Pennsylvania

Journal Announcement: RIEMAR95

A practicum was undertaken to develop a syllabus and support manual for a faculty development workshop in on-line information gathering and communication through the Internet for faculty at the Community College of Allegheny County (CCAC) in Pennsylvania. The practicum sought to determine the appropriate content and amount of time faculty would be willing to spend in an Internet workshop. Research procedures included a literature review on the impact of technology and education, an Internet demonstration for college faculty, and extensive research of on-line resources. The practicum resulted in the development of a 3-hour workshop titled, "Traveling the Data Highway." The workshop provided hands-on experience and a 26-page resource manual. Based on study findings, several recommendations were made to the CCAC Director of Computer Services, including the following: (1) the workshop be offered at the start of each semester; (2) faculty be encouraged to share their on-line experiences by e-mail; (3) the computer lab be connected to the Internet to provide workshop facilities; and (4) the workshop be revised annually to keep up with rapid Internet changes. The study concludes that a short Internet workshop can provide an opportunity to improve faculty scholarship and reduce feelings of faculty isolation. Appendices include the workshop syllabus and the "Traveling the Data Highway" manual, which covers the history of the Internet; exercises for using e-mail and searching on-line library catalogs at other colleges and universities; and descriptions of 10 on-line public access catalogs. Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida

Journal Announcement: RIEMAR95

A project was undertaken at a suburban community college to develop a Classroom Assessment Technique (CAT) that would enable parent education teachers to determine what parents learned from the lecture/discussion component of the program and whether or not the parents implemented the lessons learned. The CAT was used over a period of 6 weeks by full-time and part-time instructors who taught in the parent education program. The CAT requires teachers to: (1) choose the parent education class in which to carry out the CAT; (2) choose the parent education topic to be taught; (3) write down two learning goals for that topic; (4) write down two objectives for each goal; (5) formulate the objectives into questions to be answered by the questions in the class; (6) before teaching the topic, ask parents to anonymously answer one set of questions about the topic; (7) after teaching the topic, ask parents to answer a second set of questions; and (8) one month later, give parents a third set of questions on the same topic. A total of 2,460 questions were answered by parents during the outcome assessment survey. Out of 185 parents who completed the follow-up questionnaire, 90% stated they used class information to enhance their parenting. Parents improved and retained their knowledge 4 to 6 weeks after the class was taken. However, less than 75% of the instructors rated the CAT useful or better, many criticizing the time it took away from teaching. Future recommendations include giving instructors more time to formulate goals, objectives, and assessment questions; and planning how to provide parents with information about the assessment program without jeopardizing the outcome. Appendixes include the CAT project description, the instructor survey, parent questionnaire, and program implementation guide. (KP)

Journal Announcement: RIEMAR95
This paper describes a practicum program that was developed to increase the effectiveness of the administrative team at one high school. A lack of communication skills had prevented the target group from working together as a team. Strategies included role-play activities, workshops, and communication skill-development meetings. A series of surveys were administered to the administrative team and the entire school faculty to measure change in the team's effectiveness and faculty members' attitudes. Two out of four program objectives were achieved: (1) the team members reached consensus on a series of hypothetical discipline scenarios; and (2) they reported in a self-evaluation survey that they had improved their communication skills. However, the faculty did not consistently rate the administrators' skills as significantly (cont. next page)

teachers and a social skills training program guide was disseminated, covering friendship, cooperation, feelings, aggression, and stress. Social skills activity lessons were conducted in the classroom for all disabled and nondisabled students. Classroom teachers were provided opportunities to consult with support staff who helped implement social skills training in the mainstream. Weekly parent support meetings were held to discuss social skills concerns. Interviews with teachers and a pre/post-implementation questionnaire completed by teachers supported the positive impact of the social skills training program. Eighty-five percent of 430 mainstream nondisabled students were able to demonstrate an understanding and respect for their disabled peers. Practicum objectives concerning interaction with nondisabled peers within the community and parents' joining of support organizations were not met. Appendixes contain copies of questionnaires and an outline of the training program. (Contains approximately 70 references.) (JDD)

Low self-esteem frequently impedes students' academic achievement. By incorporating different learning and teaching strategies, this practicum attempted to build self-esteem for fifth grade students who exhibited low self-esteem. Participants were selected based on their attendance, academic achievement, and/or behavior. The writer incorporated activities that promoted cooperative learning, parental involvement, and counseling for the students. Class instruction was designed to target low self-esteem students which allowed them to use their individual interests and learning styles for academic achievement. The researcher employed different strategies such as giving low self-esteem students leading roles in class plays, involving all parents in the classroom rather than just the guardians of the study participants, and developing class cooperative groups to build attendance, and academic achievement improved for the study group. A self-report questionnaire revealed that the students' self esteem also improved. The researcher considered parent involvement as critical in developing a positive self-esteem for some students. Four colored graphs represent the practicum's results. Four appendices provide forms for student records as well as a copy of the self-esteem survey. Contains 17 references. (RJM)

Geographic Source: U.S.: South Carolina
Journal Announcement: RIEMAR95
This study addresses some of the career decision challenges facing 9th- and 10th-grade students. The researcher discovered that many students possessed inadequate decision-making strategies, that counselors did not focus on career planning prior to and during registration, and that the school district lacked a comprehensive career guidance program. Perusal of career guidance records and district policies revealed numerous factors that contributed to the dilemma: counselors lacked the time to adequately work with students; the school district emphasized the college preparatory curriculum; high unemployment rates coupled with an agrarian-based economy provided dim prospects; and insufficient teacher involvement hindered career development. Five strategies to address these difficulties are proposed: (1) a preliminary, comprehensive career guidance program; (2) a "teacher replacement program" encompassing visits from business and industry representatives; (3) field experiences for students; (4) increased parental involvement; and (5) mini sessions which focus on ethical decision making. The school implemented all five proposals. As a result, selected students made more appropriate career decisions and the preliminary, comprehensive career guidance program became the foundation for the development of a district-wide program. Sixteen appendices and six tables detail a variety of program outlines, surveys, job information, and career-development activities. (RJM)

Journal Announcement: RIEFEB95

A practicum was conducted at a rural hospital-subsidized child development center to reduce the inappropriate responses of teachers in meeting the needs of children from 6 weeks to 6 years of age. Informal observations indicated that staff members of the center were not using child development knowledge in guiding and responding to children. The physical environment was not arranged to support active learning, open-ended experiences, or language development; daily experiences at the center were not structured to give children and adults the greatest potential for interaction. A series of inservice training sessions, addressing the areas of early childhood development, learning environment, learning experiences, and supportive staff responses, were conducted on-site for all 20 staff members. Staff members were divided into teams and assigned to one of two supervisors who served as consultants and facilitators. After each training session, the supervisor and staff member agreed on goals to achieve in relation to inservice knowledge and skills. Implementation was monitored, and data were collected in a portfolio. Progress was reviewed and evaluated by the staff member and supervisor. Subsequent to the training sessions, inappropriate responses declined, and appropriate techniques of supporting child development increased. (AC)

EDRS Price - MF01/PC03 Plus Postage.Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEFEB95

A practicum was conducted at a small, private elementary school to introduce strategies that would reduce kindergarten classroom disruptions and playground disturbances due to fighting, verbal confrontations, and disregard for authority and rules. A survey conducted at the school revealed that kindergarten teachers handled a daily average of 10 disruptions in their classroom without making referrals to the administration. Causes of the problem were identified by observations, interviews with staff, daily checklists, and the teacher survey, indicating that the lack of nonviolent problem-solving skills was a major contributor to the frequency of classroom disruptions. A four-step method of conflict resolution was used, along with open-ended stories, art, music, and role play, to teach children to identify their emotions and settle conflict situations nonviolently. Choices of appropriate methods of problem evaluation, recognition of emotions, and acceptance of responsibility for actions were sequentially presented using small- and large-group interaction and role playing. The study population consisted of 25 kindergarten students. Results of a post-intervention teacher survey revealed a positive trend toward the reduction in the number of disruptive incidents requiring teacher intervention, as well as an increase in the number of incidents children were able to resolve successfully on their own.  Geographic Source: U.S.; Virginia
 Journal Announcement: RIEFEB95
 When legislation extended vocational assessment services to limited English proficient and economically/educationally disadvantaged students, which comprise 72 percent of grade 8-12 students in Norfolk (Virginia) Public Schools, innovations were needed to offer expanded services without additional personnel. A multiphase model of vocational assessment for special populations was developed, based on interviews with leaders in the field of vocational evaluation, a statewide survey of vocational evaluation centers, and a review of the literature. The Management Information Systems office tabulated information on students to identify those who met federal and state definitions of special populations. The middle school guidance and testing personnel added the Differential Aptitude Test to their testing program. Thus, the practicum resulted in all eighth grade students receiving a vocational aptitude and interest test, students with disabilities receiving streamlined vocational evaluation services, and fewer students needing a comprehensive vocational evaluation. The model has been cost-effective and complies with regulations. Appendixes provide survey forms, survey data, and administrative documents. (Contains approximately 60 references.) (JDD)

 This program was designed to alleviate feelings of isolation experienced by parents and extended family members of primary students with severe emotional disturbance (SED). Practicum activities included biweekly educative and

social support workshops for the parents and extended family members; an educative newsletter; pre-implementation and post-implementation surveys of all participants; a library of books and periodicals for participants; facilitation of a peer "buddy system"; and dissemination of information about medical, psychological, and social resources within the community. The practicum resulted in 15 extended family participants receiving information and support pertaining to issues surrounding the child's disability. The participants exhibited an improved attitude in coping with the disability, and 11 of them demonstrated an improvement in their emotional reactions to the disability. Appendices contain copies of various survey forms. (Contains 36 references.) (JDD)

 Journal Announcement: RIEFEB95
 This practicum determined that students with language learning disabilities were not experiencing success in the regular classroom, and skills acquired in a pull-out program were not generalizing to the regular classroom. The practicum piloted a first-grade inclusion program which called for the resource room teacher and speech language pathologist to co-teach with the classroom teacher for 8 hours weekly. The three educators cooperatively modified curriculum for all language levels and co-taught lessons for the whole class along with daily small group cooperative learning lessons with teachers as facilitators. Data indicated that the number of referrals for speech and language services dropped somewhat, and staff felt that students had done better in the regular classroom than they would have in a pull-out program. Achievement increased along with social and pragmatic skills though not all students met the practicum objectives. Because learning experiences were connected, there was no problem with skills taught in the resource room generalizing to the

Geographic Source: U.S.: Florida
Journal Announcement: RIEFE95

This practicum was designed to remediate handwriting skills in school-aged children who displayed visual-motor deficiencies that affect mechanical skills. Practicum goals were to: (1) identify and diagnose children with handwriting delays; (2) involve school and parent interaction by involving them with pre- and post-program assessment; (3) involve identified children in a visual-motor program to develop mechanical abilities; and (4) measure data to assess effects of training on individual children. Ten students referred to a private clinic providing educational, psychological, rehabilitation, visual, and medical services served as subjects. Practicum activities included using computer programs to develop visual tracing, closure, pursuits, and spatial integration and using haptic writing and visual auditory tactile kinesthetic integration to reinforce the visual-motor process. Results indicated that 8 of 10 children showed improvement in visual-motor integration skills. 5 children showed improvement in visual skills related to handwriting functioning, and parents and teachers reported significant improvements in children's handwriting abilities. Appendices contain a referral form, a case history form, a handwriting checklist, a handwriting inventory, and a discussion of remediation techniques for improving handwriting. (Contains 40 references.) (JDD)

Journal Announcement: RIEFE95
This practicum involved developing and implementing a comprehensive writing program to improve the academic achievement and increase the writing ability of five home/hospital students in a central Florida county. The target group of home/hospital students was assigned to an eighth grade language arts class. Writing techniques used to build writing skills via teleclass instruction included: students created an expository essay on a topic of their choice, a "Who am I?" essay, different types of paragraphs, expository and persuasive essays, and biographical compositions; students were introduced to writing resource books; students discussed skills involved in reading to others, listening skills, note-taking skills, and skills for cooperative learning; students learned about the writing process, thinking skills, and types of essays; and students shared their essays and discussed with each other their strengths and weaknesses. Student success was measured by comparing first and second semester grades and scores from the Florida Grade 8 Writing Assessment. An anticipated score of three points or higher on the holistic scoring rubric was not achieved, but a score equivalent to the average score of other eighth grades in the district was achieved, and grade point average increased from 1.8 to 2.75. Appendices provide assessment results and a writing syllabus. (Contains 21 references.) (JDD)

communication program to increase expressive language for daily living skills. Target students were four children (ages 6 to 7) with cerebral palsy. The practicum involved introducing children to pleasurable activities that encouraged communication behaviors, showing the children photographs of each activity before and after the activity, assessing the students' ability to alternate eye gaze between the activity and the service provider, teaching students a communicative signal to initiate an activity, teaching students to activate a switch to operate a computer program, having occupational and physical therapists position the students in equipment that facilitated head and trunk control to enhance vocalization and eye gaze, and conducting a group language lesson using a communication board with sequenced pictures of the story. The target group was involved in daily classroom activities over a 12-week period. Students increased their ability to eye gaze at pictures from one out of four attempts to two out of four attempts and increased the ability to give a positive response for an activity to continue by 25 percent. Students did not meet the objective concerning motor skills for computer use. Appendices provide weekly behavioral charts. (Contains 22 references.) (JDD)

Journal Announcement: RIEFEB95

The school district in this practicum report was found to be out of compliance by the State Department of Education in the area of writing individualized education plans (IEPs) that contained goals and short-term objectives with measurable student outcomes. Informal workshops were held to provide the special education teachers training for writing IEPs using Robert Mager's model for writing goals and objectives. In addition, the teachers were given Benjamin Bloom's taxonomy and a programmed instruction on how to write appropriate goals and instructional objectives. After the training, analysis of randomly selected IEPs suggested that the writing of

objectives improved. Results of a pretest/posttest also indicated that the training was successful. A parent-teacher meeting was held to encourage the parents' participation in the IEP process and brought about many positive interactions among staff, administrators, and parents. Appendices contain copies of questionnaires, teacher pretest and posttest scores, and sample IEPs. (Contains 23 references.) (JDD)

A practicum analyzed possible alternatives to identify the most successful reading intervention strategies before a child's development and learning is seriously or permanently impaired. K-3 students were identified for an early intervention reading program in a public school setting. Through the Students Study Team, which was expanded to include specialists, parents, and categorically funded staff, so that students could receive reading intervention long before they had failed sufficiently to require placement in special education. Students read to, and were read to, by teachers and participated in cooperative learning groups for about seven weeks. Although the program took place at the end of the year, staff, parents, and children felt the program was successful and merited expansion from K-3 to K-12 for the following year. (Contains 44 references. Appendixes present pre- and posttest instruments, a parent survey, a calendar of activities, and a description of performance levels for reading.) (Author/RS)

Document Type: PRACTICUM PAPER (043)

Journal Announcement: RIEJANGS

An attempt was made to improve parent involvement of culturally and ethnically diverse families in an elementary school with 35 to 39 percent minority students, as well as to establish a climate of cooperation between school and home and to attempt to reduce the student mobility rate. A Welcome Committee was created to reach diverse families. This committee consisted of volunteer staff members and parents who were identified and trained by the writer. Teams of two conducted home visits welcoming families and providing specific information on the school. The project was designed to establish, from the very beginning, a cooperative relationship between families and the school. Teachers were surveyed before and after the implementation of the Welcome Committee. The student mobility rate was also measured before and after, and parents completed surveys. Analyses reveal that the Welcome Committee significantly improved the level of parent involvement for minorities. Teacher perceptions of involvement of minority parents also improved, and the student mobility rate decreased from 59.2 to 35.9 percent. Appendixes contain the parent survey in English and Spanish, Welcome Committee guidelines, and a press release. (Contains 23 references.) (Author/SLD)

Journal Announcement: RIEJANGS

This practicum was developed to involve Hispanic parents in a middle school where Hispanic parent involvement was nonexistent. Thirty at-risk Hispanic eighth graders in an urban middle school were identified by the eighth-grade guidance counselor as in danger of not being promoted to the ninth grade. The objectives of this practicum were that 30% of the Hispanic parents will attend one of three parent meetings; the academic performance of the target students will improve; the amount of homework completed will increase; and personal contact will be made with 75% of the targeted parents. Parents were called every Sunday night to discuss the progress of the students. A different homework hint was mailed to the parents every week for 10 weeks. Tutoring was available to the targeted students every Tuesday after school. The students kept a daily homework log for 12 weeks. Teacher; filled out a weekly progress report for the targeted student. The results showed that Hispanic parents were willing to get involved in their students' education if communication was in the native language. Also, initial contacts needed to be less formal to avoid intimidating parents. Appendices include homework hints, a program description, a parent survey, and forms translated into Spanish. (Author)

Utilizing Multiple Intelligence Theory and Outcome-Based Measures To Develop a Core Framework for Science and Social Studies Curriculum Kindergarten through Grade Five.
Phelan, Vanessa C.
1994
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)
Language: English
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95

This document is a practicum designed to respond to concerns from both parents and staff about the duplication of instructional topics or themes in more than one grade, while other topics were not covered at all. The development of a predictable core curriculum framework for grades K-5 was one of several goals of this project to provide a predictable and consistent presentation of both science and social studies content. This report describes a committee's development of a skeleton of core topics in science and social studies. These topics were mandated to be presented at each grade level to provide predictability and consistency for instructional staff and parents. The committee developed learner or student outcomes for each of the topic areas, identifying specific content, processes and values that were believed to be

prerequisites for education in the 21st century. Exemplary integrated interdisciplinary units utilizing multiple intelligence theory as their foundation were developed and acquired on some of these core topics as well as others for teachers to use for collaborative instruction and assessment. Analysis of the data revealed that the minimal core curriculum for science and social studies in the elementary grades was positively accepted by community members, parents, staff, and administration. Document Type: TEACHING GUIDE (052); PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95
Target Audience: Teachers; Practitioners
This practicum was designed to increase student achievement and to motivate 11th grade U.S. history students to consistently complete homework assignments, to actively participate in classroom discussions, and to perform with a passing grade of "C" or above on all examinations. This paper describes the development of a multicultural curriculum and its implementation in a large classroom U.S. history course. The curriculum was developed for a class of 200 students from a student body with an ethnic composition of 56 percent Hispanic, 31 percent black, 13 percent white, and one percent Asian American/Indian. The textbook that had been in use gave inadequate attention to minority groups and women, so that these students did not feel they were an integral part of the U.S. history experience. The curriculum was designed to encourage active student involvement in their course work. It emphasized the use of guest speakers; hands-on discovery learning projects designed to enhance knowledge of the diverse cultural heritage of students in the United States; and group projects and oral history projects designed to expand each (cont. next page)

Student's sense of the relevance of U.S. history to today's world. Results indicated that, as a result of implementation, students were significantly more involved in and enthusiastic about U.S. history than in previous classes. Students achieved higher levels of performance than in prior classes. The appendices include specific performance standards of U.S. history; and a competency based curriculum for U.S. history. Contains 17 references. (DK)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95
This practicum was designed to address declining parental participation in school functions and activities at a middle school, along with a low level of parental involvement or interest in their children's education. A year long parental involvement program was developed that encouraged parents to: (1) interact with their children and their children's teachers on a regular basis; (2) participate in class trips, assembly programs, and the parent-teacher organization (PTO); (3) provide a quiet place for their children to study and for parents to work with their children on a daily basis; and (4) meet with teachers and administrators to discuss problems and concerns. The program also provided--through a program newsletter, small group meetings, and workshops--information to parents about adolescent development, their roles as parents, and school policies. As a result of the practicum program, PTO membership and attendance at PTO meetings increased, and parent participation in school committees rose significantly. Over the course of the program, discipline problems within the school declined, while student grades and self esteem improved. (Seven appendices contain copies of parent survey forms, homework logs, and parenting materials. Contains 17 references.) (MDM)

Improving Critical Thinking Skills in Second Graders through Instruction and Teacher-Led Discussion Groups.
Tillman, Yvonne R.
1994
48p.; Ed.D. Practicum Report, Nova Southeastern University.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95
This practicum was designed to address the problem of a class of 23 second-graders who were unable to make judgments and support opinions at all levels of Bloom's taxonomy. The goals of the practicum were to design and implement a Critical Thinking Skills (CTS) program that taught students to make judgments and support opinions, and that encouraged students to think about and react to literature. To attain these goals, pre- and posttests were developed and administered to assess students' critical thinking skills. Twelve critical thinking lessons were developed and administered to the class. These lessons included reading and writing activities, small- and large-group discussions, and self-selection of books. As a result of the practicum, 14 of the 23 students were able to make judgments. 18 of the 23 students were able to support their opinions, and all 23 students were able to demonstrate at least one CTS. (Four appendices contain a CTS inventory, a CTS student behavior checklist, a making judgements test, and a supporting opinions test. Contains 19 references.) (MDM)

Improving Parent Involvement in a First Grade Classroom through the Use of Whole Language Activities.

Hooper, Elizabeth J.

Feb 1994

91p.; M.S. Practicum Report, Nova University.

EDRS Price - MF01/PC04 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida Journal Announcement: RIEJAN95

Parents of a group of first graders knew very little about the whole-language approach to reading employed in their children's classroom and were consequently unable to help their children as they learned to read. A program was implemented to provide parents in a target group with an understanding of the whole-language approach to reading as well as to provide strategies to use at home with their children. Secondary objectives of the program included increased mastery of first-grade skills for the students and a high level of enjoyment by parents and students as a result of the program. The program involved the parents and their children in 10 weeks of daily, whole-language activities, and parents participated in an orientation, conferences, and a final parent meeting. An initial and final parent survey, a language arts/reading checklist, a student survey, and an activities log were used to measure the effectiveness of the program. Results indicated that parental understanding and use of whole-language strategies exceeded the predicted positive outcomes. Students in the group significantly improved in skill mastery, and both parents and children were able to work and learn together in a positive setting, thus improving parent-student-teacher relations. (Eleven appendices contain samples of the project surveys and program materials.) (TJQ)

ED373879 PS022553 A Program for Teaching Telecommunication Skills at the Middle School Level.

Brett, Catherine A.

Jun 1993

113p.; M.S. Practicum Report, Nova University.

EDRS Price - MF01/PC04 Plus Postage. PC Not Available from EDRS.

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida Journal Announcement: RIEJAN95

As part of a restructuring initiative to meet the curriculum needs of the "Information Age," a plan for teaching telecommunications to middle school students was developed. The resulting program, called Bulletin Board Simulator (BBS), provided a hands-on approach to teaching students the skills necessary for accessing an electronic bulletin board system or information database. This instructional method was deemed essential in maintaining a high level of interest while making the course objectives relevant and meaningful to all of the students. The success of the program was evidenced by a significant increase in the target group's scores on a communications skills assessment test, compared to the scores of the non-target group. The course objectives were easily completed by all the students who were provided with the hands-on practice, compared to only 25 percent completion of these skills by the non-target group. The target group's self assessments revealed a more positive attitude toward learning about technology as a result of the program, and most students expressed a realization that this type of learning and technical ability would have an impact on their success in the future. (Seven appendices contain the evaluation instruments, student progress chart with the course objectives, the SimBBS program, and source code.) (TJQ)

ED373874 PS022530 Lowering the Attrition Rate of Single-Parent Community College Students Enrolled in Child Development through Assessment of Their Special Needs.

Van Cleve, Tamara Gracy Toy

1994

139p.; Ed.D. Practicum, Nova University EDRS Price - MF01/PC06 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043) Geographic Source: U.S.; Florida Journal Announcement: RIEJAN95 This practicum's goal was to lower attrition rates of single parents in child development classes at a community college by raising each student's self esteem. The subject parents: (1) had at least one child under age 6; (2) were eligible for educational opportunity grants; (3) were recipients of Aid to Families with Dependent Children (AFDC); (4) were single heads (cont. next page)

of households; (5) became parents during the teen years; and (6) were enrolled in child development classes. As a measure of progress, the practicum sought to analyze journal entries for changing themes, establish an information center and survey the students on its use, foster participation in a support group, and lower attrition by 15% in the child development classes. Analysis of journal entries indicated an increase in positive self-confidence in 10 of 25 students. The objective of establishing an information center was not met; however, a successful support group was established. The final goal of lowering the attrition rate was not fully met because the attrition rate decreased by only 9%, instead of 15%. (Appendices include journal and child study assignments, frequently asked questions on child development, materials from a workshop on gangs, sources of stress for children, and a list of child needs for good mental health.) (SW)

A Staff Orientation and Training Program Developed To Decrease Turnover of Newly Hired Staff in a Child Care Center.
Bisesi, Janice I.

1993
69p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJANG95
This practicum was designed to decrease turnover of newly hired teachers in a child care center by means of a 12-week orientation and training program for newly hired staff. In 1992, nearly half of the newly hired teachers had left the center within 6 months. Surveys of remaining staff, some of whom had already turned in resignations, indicated that the majority felt that their job responsibilities, the center's goals and objectives, and center policies and procedures were unclear. The program developed and implemented to correct this problem included presentations on personnel policies, center policies and procedures, licensing regulations, parent communication, classroom management, and the goals and mission of the center. An analysis of post-intervention teacher surveys found that the teachers were able to identify the mission and goals of the center, understood school policies and procedures, were aware of state licensing requirements,

and could demonstrate an understanding of classroom management techniques. Staff turnover was reduced as a result of this practicum, with 9 out of 12 participants remaining employed at the center for a period of 3 months or longer. (Four appendices contain copies of the classroom observation checklist, center goals and objectives, policies and procedures survey, and the center's mission and vision.) (Author/MDM)

(160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJANG95
This practicum sought to develop a video-based orientation program for a day care center. A one-time orientation meeting was not feasible for this community college-based center, due to flexible scheduling, staggered starting dates of new staff, and a diverse staff. An increase in staff size, space, and enrollment intensified the already difficult task of providing an effective and meaningful orientation program. These conditions necessitated an individualized approach to orientation that incorporated a knowledge base of six information goals: (1) physical features of the center; (2) educational philosophy; (3) staff role; (4) professional relationships; (5) center procedures; and (6) teaching strategies. Three videotapes incorporating the six goals were produced during the summer of 1993 and used for staff orientation in the fall semester. Compared with the semester before the video orientation program was implemented, staff cohesion and knowledge improved, and new staff were more confident in their assigned roles. A posttest found that 90 percent of the new staff had a working knowledge of the six information goals. (Five appendixes include a practicum verification form, staff questionnaires, results of staff (cont. next page)

self-evaluations, and discussion questions that accompanied the second videotape.) (MDM)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Virginia
Journal Announcement: RIEJANG5

Project REAL (Relationship skills, Education on violence prevention, Academics, Leadership and decision-making skills) was a practicum designed to increase the academic achievement of middle school students exposed to domestic violence. Eleven students and their parents participated in a 12-week interpersonal-cognitive counseling group and its parent education component. Project REAL provided students with: (1) instruction on stress management, conflict resolution, communication, study, and decision-making skills; (2) art therapy; and (3) guest speakers from community agencies that provide direct services to victims of domestic violence. Parents were counseled individually and received a resource guide on the services available to victims of domestic violence. The results of the practicum indicated that middle school students exposed to domestic violence need more than a 12-week group counseling program to increase their academic achievement. Although student academic performance did not increase significantly, parents did gain a better understanding of the effects of domestic violence on their children and on the resources available to overcome domestic violence. (Four appendices contain copies of a project evaluation survey, student pre- and posttests, a parent interview form, and permission to use references. Contains 38 references.) (MDM)

Geographic Source: U.S.; Maine
Journal Announcement: RIEJANG5

A 5-year Title III grant received by Northern Maine Technical College (NMTc) in 1989 provided funding for professional development (PD) activities at the college. To evaluate the impact of the grant and plan for the continuation of the professional development program, a study was conducted in 1994 near the end of the grant period. Following a literature review to identify theoretical bases for staff development, 90 NMTc administrators, staff, and faculty were surveyed regarding their perceptions of 11 types of development activities and of the current program's organizational structure and approval processes. Responses were received from 9 administrators, 10 support staff, and 32 faculty, for an overall response rate of 56%, lower than the 70% response recommended to accurately reflect employee perceptions. With respect to types of development activities, 9 out of the 11 activities received a mean score of 3.5 out of 5, indicating approval, with university courses and seminars or workshops receiving the highest ratings. In addition, respondents generally favored continuation of the current processes and structure. Other conclusions included the following: (1) employees were not certain of the adequacy and appropriateness of communications from the college's PD committee; (2) there was a strong perception of the positive impact of PD funding; and (3) performance evaluation and PD funding priority should have a closer connection. Contains 18 references, the survey instrument, and responses to open-ended questions. (KP)

233p.; Major Applied Research Project. Doctor of Education.
Nova Southeastern University.
Language: English
Document Type: DISSERTATION (041); TEST. QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95

The purpose of this study was to create a multi-tech distance learning program (MTDLP) for Folsom Lake College (California) with special emphasis on the teaching of health problem-solving methodology. Data were obtained from several sources: a review of the literature; a review of established distance learning programs from postsecondary institutions; and interviews of practitioners involved in distance learning. The development of the MTDLP was complex and required careful consideration of the following key issues: the identification of the MTDLP; selection and training of faculty; adapting traditional health science curricula; ensuring optimum faculty/student interaction; support services; and technology and its implied costs. The MTDLP developed in this study was based on the Rio Salado Community College (RSCC) model in Phoenix (Arizona). The MTDLP developed for Folsom Lake College contained recommendations for support services; registrations procedures; orientation programs; counseling programs; student access to course materials; and course/instructor evaluation forms. Included in the appendixes are the interview questions; summary of interviews; and the final draft of the MTDLP. (Contains 61 references.) (Author/JLB)

Journal Announcement: RIEJAN95

This practicum addressed the problem of families having insufficient skills and resources necessary for locating information about the physical, socioemotional, and academic development of their young children in an early intervention program. The practicum's goal was to help parents acquire these necessary skills and resources. A family resource center was established on a public school campus, including: books, tapes, toys, and other resource material for families to borrow; information about community agencies; a referral telephone line service; and support groups; and other information sharing activities. Newsletters about community agency services were distributed to teachers to assist them in making appropriate referrals. Analyses of evaluative data showed that parents gained an understanding of how to use acquired information, expressed an increased feeling of support, and cited specific examples when acquired information was useful. Additionally, teachers demonstrated an awareness of appropriate community referrals. Appendices include the Family Needs Survey, other survey forms, and a pretest/posttest regarding developmental appropriateness of materials and services. (Contains 23 references.) (JDD)

This practicum was designed to provide speech and language therapy to children identified as speech and language (cont. next page)

Impaired, in a Head Start classroom with typically developing peers. The practicum involved amending Head Start component plans, discussing inclusion issues at four education component meetings, conducting an interagency meeting with service providers to identify what was and was not working with inclusion and how to overcome the barriers, administering pre-post surveys to Head Start teachers and graduate students in special education, identifying the elimination of segregated therapy space as a barrier to inclusion, facilitating establishment of communication centers in five classrooms, and advocating for the least restrictive environment to the Committee on Preschool Special Education (CPSE). Analysis of the outcomes revealed that systemic change in the delivery of speech and language therapy did occur. Twenty-three children used the communication center for speech therapy in their classroom. Head Start teachers and graduate students exhibited changed attitudes about inclusion. The number of CPSE's recommending therapy in the least restrictive environment went from zero to two. Appendices include profiles of the education staff, an inclusion attitudes/beliefs instrument, a workshop outline, and notes for an inclusion presentation. (Contains approximately 100 references.) This practicum developed a program to help students with disabilities to locate adequate employment, utilize community services, and live independently in the community. Practicum activities involved developing a comprehensive K-12 vocational curriculum, developing a policies and procedures manual for competitive/supportive employment, increasing parental support, developing a brochure describing the transition vocational career education program, establishing job training sites, training and placing secondary students with disabilities at

job training sites, and training five job coaches. A total of 331 students with disabilities in grades 9-12 participated in the program. Students studied occupational skills such as resume writing and interviewing along with studying safety, use of hand tools, plumbing, electrical work, auto maintenance, small engine repair, carpentry, brick masonry, food service, business education, math for the work place, and English for the work place. Participants located part-time jobs for program participants and acted as job coaches; these part-time jobs led into full-time jobs when the participants completed high school. Appendices include copies of rating scales and a summary of the vocational career education curriculum. (Contains 35 references.) (Author/JDD)

(141) Geographic Source: U.S.; New York
Journal Announcement: RIEJAN95
This practicum was designed to increase collaboration between special education resource room teachers and regular elementary education classroom teachers. Procedures were developed to ensure that students with learning disabilities (LD) who were placed in regular classes received appropriate instructional and assessment modifications. Training in the collaboration model was provided to resource room teachers. Resource teachers completed "Student Alert" forms which described the student's strengths and weaknesses and listed necessary testing modifications for each LD student, and sent them to classroom teachers. Resource teachers and classroom teachers then collaborated in completing a Teaching/Assessment Plan (TAP) for each student, which included curriculum goals, instructional strategies, and assessment strategies. An evaluation questionnaire was completed by regular education teachers at the conclusion of the practicum indicated that they changed their instructional and assessment techniques as a result of the collaboration process and felt more confident in teaching LD students. Appendices provide the (cont. next page)

questionnaires, a report card and revised report card checklist, the "Student Alert" form, a TAP document, and classroom and resource teachers' responses to the evaluation questionnaires. (Contains 27 references.) (Author/JDD)

Enhancing Services for Toddlers with Disabilities: A Reverse Mainstreaming Inclusion Approach.

Cormany, Ernestine E.

1994

89P.; Ed.D. Practicum Report., Nova Southeastern University.
EDRS Price - MF01/PC04 Plus Postage.Language: English
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJAN95

This practicum designed and developed a program to implement a reverse mainstreaming model of inclusion for 7 toddlers (ages 1 to 3) with disabilities (Down syndrome, profound mental retardation, cerebral palsy, neurofibromatosis, stroke, and hearing impairment) and 3 of their typically developing peers. Emphasis was on the provision of appropriate peer role models for toddlers with disabilities and the encouragement of an appreciation of children with differing abilities by typically developing children. The program was provided within a community day care facility. Analysis of pretest and posttest test scores (on the Early Intervention Developmental Profile) before and after 3 months of program implementation revealed that the program's seven children with disabilities improved in their social/emotional and language scores. The program's increased social/emotional scores and no regression in other developmental domains. All families expressed appreciation for the program, felt it had been beneficial for their children, and wished to see it continue. Appendices include the parent survey form, teacher/therapist interview questions, interview questions for parents of typically developing children, the family satisfaction survey, sample newspaper publicity, the consent form, and a discipline statement. Contains 85 references. (Author/DB)

Document Type: PRACTICUM PAPER (043); PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95
This practicum was designed to increase the inclusion of elementary-level students who have physical disabilities with their nondisabled peers in art, recess, and media center activities. Regular education classes were invited to join the art activities in the self-contained class for the students with physical disabilities, and a total of four regular classes participated in at least two sessions. Disabled and nondisabled students were teamed to produce multicultural art projects using ceramic clay. Students from the self-contained classroom also attended lunch at the same time as their same-age peers, went through the lunch line with them, sat at tables with them, and cleaned their tables together. Informal evaluation indicated that regular students began greeting the special education students when they encountered them on campus and the playground. Greetings of special education students to the regular education students were limited. In the beginning, regular education students were reluctant to assist the students with disabilities, but by the end of the classes they were independently working with each other. Teachers made many positive comments about the experience. (Contains 26 references.) (Author/JDD)

Journal Announcement: RIEJAN95

This practicum report describes the development and implementation of a program to increase parent participation in the planning and conducting of activities sponsored by the district-level special education parent advisory committee. Monthly meetings and social events were held to encourage the 250 special education families to be more involved with their children's school programs. Major difficulties were experienced in practicum implementation and only one of three outcomes was achieved. Bureaucratic problems and lack of teacher encouragement of parent participation were considered as partial causes for continuing low parent participation. The Survey of Attitude Regarding Parent Involvement and its results are appended. Contains 40 references. (DB)

Journal Announcement: RIEDEC94

Target Audience: Administrators; Practitioners
This practicum was designed to develop and implement innovative strategies to improve home/school communication and to increase family involvement of hard-to-reach parents in an effort to cultivate healthy home/school relationships and an open and friendly school climate resulting in a more effective high school. The writer established an advisory of stakeholders to govern a family outreach project, organized a program to provide student greeters and tour guides for school visitors, and enriched the hospitable feeling of the school's entrance area. Written, telephone, and face-to-face communication was increased and a comprehensive application of electronic media was targeted at underrepresented families. The writer advocated building personal relationships with families through school social events and collaborated with community-based organizations to foster healthy home/school relationships. Examination of the data revealed that as a result of this initiative there was a heightened awareness and interest in school/family relationships as well as the importance of school culture among the school staff. Enhanced communication increased family attendance at school events and raised parent's consciousness of school news and information.

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN95
This practicum was designed to create an organizational model that would set the stage for the creation of a comprehensive program of substance abuse treatment in a residential setting. The subject population was women ages 15 to 25 years, who had children or were pregnant and who demonstrated patterns of substance abusing behaviors. This writer developed a database professional organizations and practitioners to determine the feasibility of the suggested model treatment program. With the input received, a non-profit organization was created to formalize the basis for program development, long term and strategic planning and the meeting of all licensure requirements. Input was also received by graduate schools of social work and professionals in the

Post-survey results indicated that families recognize the school as a more friendly, open, and welcome place. (Contains 61 references.) (Author)

Comparing Course Content and Awarding Credit for Nonacademic Training Programs for International Providers of Child and Youth Services under Federal Sponsorship.
Coleman, Carolyn I.

1994 84P : Ed.D Practicum. Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: THESIS (042); RESEARCH REPORT (143)
Geographic Source: U.S.; Florida
Journal Announcement: RIDEC94
Target Audience: Researchers

In coordination with training officers, student programming agents, and students, a system was designed that would allow a comparative analysis of nonacademic courses offered by U.S. institutions and international providers of children and youth services, permit students to earn internationally recognized continuing education units, and establish a computerized record system that would include pertinent training course and credit information. Materials were prepared in the practicum for nonacademic training programs that would hold training providers more accountable for offering what they advertise, and a system was designed to ensure that nonacademic study by international providers of child and youth services was recognized through granting internationally recognized credit. Besides the organization of a student nonacademic advisory council, meetings with stakeholders ascertained what was most needed to develop a system for tracking courses taken by international nonacademic students under federal sponsorship. Analysis of the data revealed that the more information given about a course when it was announced, the greater the likelihood of the student and funding agency choosing the best continuing education course to meet the defined student needs. Students were more likely to want to remain in lifelong learners when they knew that their nonacademic courses would be recognized internationally. (CK)

Increasing Attendance at Early Morning Religious Education Classes by Increased Personal Attention, Recognition, and Teacher Improvement.
Ahlborn, Ernest S.

1993 86P : Ed.D. Practicum. Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIDEC94

Designed to provide volunteer, religious education teachers with several tools to increase attendance at early morning religious classes and counteract student absenteeism, the study developed a computerized roll and record keeping system, taught new teaching skills and methods, instructed the teachers to make personal contact with absentees within 24 hours, and introduced a reward and recognition program for students as well as encouraged make up work. The sample consisted of 34 teachers and 611 students in early morning religious classes held by the Church of Jesus Christ of Latter-day Saints. At the conclusion of the practicum, the results indicated that attendance increased 3% compared to the same period the previous year. Both teachers and students expressed that rewards did not encourage attendance. Personal contact and make up work did the most to increase attendance. Teachers felt more secure and successful with the increased ability to use new teaching skills. Extensive appendices highlight eight areas of supplemental information: (1) Church Education System (CES) news release; (2) CES mission statement; (3) curriculum sample; (4) certificate of achievement; (5) make up guidelines; (6) sample class roll; (7) sample monthly report; and (8) student questionnaire. (Author/CK)

This practicum was designed to initiate the use of computers in an elementary setting. There is a need for all teachers to be technologically informed about computers in order to properly and successfully develop a student's capability in technology. This practicum examines computer anxiety and what can be done to eliminate this fear. An analysis of this problem indicated the importance of providing teachers with opportunities to manipulate computers, evaluate software, and incorporate awareness of what is available and how to use it. The problem-solving task takes place in a K-2 elementary school located in a large southwestern metropolitan school district. A total of 27 teachers participated in a 12-week computer training in-service program. The training sessions focused on the use of the computer in the educational setting; basic computer concepts; available computer software; and hands-on experiences. The results of the practicum indicated that all the outcomes were attained. The number of teachers that attended the computer lab increased significantly. Teachers were more familiar with and confident using the computer system. The student population that utilized the computer lab also effectively supplemented classroom activities with a variety of computer programs. The surveys used in the study are included in the appendices. (Contains 32 references.) (Author/JLB)

Geographic Source: U.S.; Florida
Journal Announcement: RIEDEC94

A 3-month practicum utilized teacher workshops and biweekly consultation to provide all fourth grade teachers (N=11) in a public school district with higher level questioning strategies to meet gifted students' cognitive needs. A total of six fourth grade students were identified as gifted and talented. At the workshops, higher level questioning strategies, based on Bloom's Taxonomy and Hilda Taba's Concept Development and Interpretation of Data, were modeled. Teachers used these strategies in their daily questioning routines. Strategy implementation was individually addressed in biweekly consultations. Analysis of pre-post samples of questioning strategies indicated that teachers were using the strategies and that questions were of a significantly higher level. However, an attitude survey of teachers indicated that teachers continued to feel unsure about their ability to meet the needs of these students in the regular classroom and desired additional support. Students achieved a 7.27 percent improvement on the Ross Test of Higher Cognitive Processes. Appendices include the teacher attitude survey, question/statement components classified according to Bloom's taxonomy, results of teachers pre-post question samples based on Bloom's taxonomy, sample pre-post questions, and results of the pre-post cognitive test given to students. (Contains 25 references.) (DB)

Teaching Strategies Designed To Meet the Cognitive Needs of the Gifted and Talented in the Regular Classroom.

(142) Geographic Source: U.S.; New York Journal Announcement: RIEDEC94

This practicum attempted to modify the antisocial behavior of 25 early adolescent children classified as having emotional disturbances by a training program to facilitate the development of affective skills in their mothers. The 8-month training program involved discussion groups, social activities, and individual and/or small group meetings with the program developer. In the colloquia, mothers were exposed to issues concerning affective development using the taxonomy of Benjamin Bloom. Interactions between mothers and their children were observed during social activities and in home visits. Program evaluation indicated program success as indicated by high attendance of mothers at the colloquia and other meetings, observed improvements in affective skills, a gain in knowledge of factors that alter children's behavior, and a reduction in the recorded number of incidents of antisocial behavior by the children. Appendices include the intervention contract, the affective skills inventory, and a sample certificate of completion. Contains 20 references. (DB)

ED372547 EC303179 Increasing Frequency and Appropriateness of High School Teachers' Referrals for Speech Language Support Services by Implementing a Public Relations Campaign. Weiner, Linda E. 16 Mar 1994

63p.; Ed.D. Practicum Report, Nova Southeastern University. EDRS Price - MF01/PC03 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043) Geographic Source: U.S.; Pennsylvania Journal Announcement: RIEDEC94

This practicum addressed the problem of high school students with speech and language impairments not receiving available support services because of under-identification of this population. A 3-month multiple channel public relations campaign was designed and implemented to train high school teachers in the identification and referral process. The campaign aimed to increase teachers' awareness of communication disorders in adolescents, the availability of services for these students, and the teacher's role in the identification process. Analysis revealed that, following the campaign, the frequency and appropriateness of referrals for speech language services were increased. Providing information to teachers via inservice training proved to be the most potent aspect of the public relations campaign. Classroom observations of referred students formed a basis for increased collaboration between the speech language pathologist and high school teachers. Appendices include a teacher questionnaire, classroom observation form, a pre-evaluation flow chart, a pragmatic skills checklist, and sample newsletters. (Contains 37 references.) (Author/DB)

(142); TEST, QUESTIONNAIRE (160)

A practicum was designed to help 40 students enrolled in creative writing classes at a suburban high school develop criteria with which to evaluate the aesthetic qualities of what they read. They were able to discern the differences between good and bad literature. Students were active participants in the process, performing skits, writing prose and poetry, and individually formulating criteria for evaluating the works of professionals and of their peers. Their final products were children's books they designed and wrote. Prose and poetry samples were disseminated, pre- and postsurveys were administered, students were trained in the peer editing process, and students were helped to prepare peer editing critique sheets. Analysis of the data revealed that the students could distinguish between good and bad literature. (Two tables of data, survey instruments and evaluation forms for book critiques, poetry evaluation, skit evaluation, and college essay critiques are included. Contains 29 references.) (Author/RS)

Journal Announcement: RIEDEC94
A home writing program was developed and implemented using proficiency by soliciting parent involvement with home writing and to improve attitudes toward writing. Students attending a north central Florida school were supplied with a writing suitcase containing thematic story starter cards, a parent guideline page, a time and comment card, and various writing and art materials. The success of the writing program was measured by comparing the scores of pre- and post-writing samples written to a prompt and by assessing pre- and post-surveys of parent and student interest in writing. Results indicated a moderate level of achievement for the target group: writing ability increased 19%, positive parental interest increased 15%, and positive student interest increased 13%. Findings suggest that subsequent utilization of the home writing program over a longer period of time could provide a vehicle to increase writing proficiency skills. The success of the program has led to plans for implementing the home writing program school-wide in kindergarten through grade three. (Includes three tables of data. Appendixes present data on scores, survey instruments, writing prompts, sample story starter cards, the parent guidelines, the rubric, scoring scale for narrative writing, and student story samples. Contains 21 references.) (Author/RS)

Journal Announcement: RIEDEC94
A practicum was designed to encourage 60 at-risk young children in a Chapter 1 reading program at a rural primary school to read for pleasure so that they would eventually (cont. next page)

Increase literacy development. The parents, teachers, and volunteer readers would increase the amount of time spent reading aloud to the children in the Chapter 1 reading program. These individuals would become the reading role models for at-risk children. A grade level in-service program presented current views and information necessary for teachers, staff, and volunteers of enrichment reading for at-risk children. The value of reading was reinforced by providing increased books and magazines that assisted the teachers with classroom libraries and materials for reading aloud. Volunteers, such as peers and individuals from the community, were effectively incorporated with the teacher's needs. Analysis of the data indicated that parents reported their children enjoyed the time spent reading stories together and that they had increased their reading. Teachers stated that the at-risk children who were read to exhibited an attitude of confidence and expanded literacy development. (Contains 33 references. The beginning survey and the parent survey instruments are attached.) (Author/RS)

Improving Reading Comprehension Achievement of Sixth, Seventh, and Eighth Grade Underachievers.

Turner, Thomas N.
 Aug 1993
 131p.; Ed.D. Research Project, Nova University.
 EDRS Price - MF01/PC06 Plus Postage.

Language: English
 Document Type: DISSERTATION (041); TEST, QUESTIONNAIRE (160)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEDEC94

A program to improve sixth through eighth grade underachieving students' reading comprehension was developed. Students were identified by comparing their anticipated and actual national percentile scores on the Test of Basic Skills (TBS) and the Comprehensive Test of Basic Skills (CTBS). A survey of students' reading behavior, a review of school library circulation statistics, and the administration of the Estes Scale of Reading Attitudes revealed reading was not a priority interest for upper elementary grade students at Franklin Elementary School (serving grades K-8) in Franklin, New Jersey. The major solution strategies employed to improve achievement were designed to also increase positive attitudes toward reading. Strategies included the implementation of sustained reading, Accelerated Reader, a campaign for public library membership, a home reading contract, a

read-aloud program, and a novel-based approach to reading instruction. As a result of the interventions, 82% of the 46 underachievers who completed the project improved their reading comprehension achievement on the CTBS and 52% met their original anticipated achievement as predicted by the TCS. Although the underachievers showed a mean increase of 8.36 normal curve equivalent points on the CTBS reading comprehension sub-test, only eighth graders demonstrated a mean increase in positive attitude toward reading. Increased reading activity had a positive relation with improved reading comprehension; however, no clear association involving reading attitude and the interventions emerged. (Includes 22 tables of data. Appendixes present district goals in reading, data, survey instruments, the student-parent-teacher reading contract, and a read-aloud response form. Contains 34 references.) (Author/RS)

A program was developed and implemented to help identify, give direction to, and build self-confidence in children who lack emergent reading skills on entering first grade. Objectives were for 80% of the 18 students at a Florida elementary school to recognize the basic concepts about print, and that two or more cueing systems be used to decode or self-correct by 80% of the students. Subjects were instructed using Peer Early Action Reading Literacy (PEAR), consisting of four workshop sessions, paired reading, response journals, computer exercises, and a comprehensive literature program. Measurement tools were the Kindergarten Report Card, a teacher-made checklist and teacher observations, and the response journals. All program objectives were met. The target (cont. next page)

group improved dramatically in all areas. (Contains 16 references and 3 tables of data. The reading readiness skills survey, a strategy group chart, and a story map are attached.) (RS)

ED372311 CG025515 Short Term Program Component To Build Self-Esteem in a Small Group of Abusive and Potentially Abusive Parents.
Zimmerman, Judith

1993 63p.; M.S. Practicum, Nova University.

EDRS Price - MF01/PC03 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC94

This practicum was designed to enhance the self-esteem of abusive and potentially abusive parents. A combination of strategies was used to enhance self-esteem and to help parents solve problems in an appropriate manner. The intervention strategy included three objectives: (1) gain the confidence of the participants; (2) use a curriculum that allowed parents to explore and express their feelings about their past and future as these related to their parenting skills; and (3) presentation of situations that stimulated parental problem solving. Materials from an existing curriculum on self-esteem in abusive parents was used on the parents of children (ages birth to five years) in a private, non-profit child care center. Most of the parents were referred by social agencies in response to suspected abuse or neglect. Participants were allowed ample time during individual and group sessions to discuss their concerns and questions regarding their roles as parents. Pre- and post-test measurements indicated that all program objectives were met. Parents improved their ability to approach parenting problems in a positive rather than in an abusive manner. It is believed that much of the program's success had to do with the individual attention that each parent received. (RJM)

Language: English Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIENOV94

This practicum was devised to promote academic achievement by reducing problem behavior in third graders. Students developed behaviorally correct options to promote prosocial behavior and avoidance of hostile situations in their social context by identifying social deficits and using discovery and transfer-learning techniques. Student pre- and post-assessment activities were developed, and behavior and academic progress charts were prepared. Child-centered mini-workshops presented individualized activities relative to identified social deficits and conflict-avoidance options. Pre- and post-achievement tests were administered, and a child-behavior checklist was completed for each child. The 21 subjects also completed pre- and post-self-assessment activities. Data analysis reveals that the targeted participants in the behavior-change practicum were more likely to avoid hostile situations and to focus on academic achievement. Post test behavior-checklist observations and posttest academic achievement results demonstrate an awareness by participants of what being prosocial means, knowledge of how to apply their social skills, and improved academic achievement. Four appendixes contain a strategies chart, a parent-notification letter, a progress chart, and a certificate of participation. (Contains 14 references.) (SLD)

Journal Announcement: RIENDV94

The purpose of this study was to develop a valid and reliable health promotion workbook to assist staff and volunteers of the AIDS Calgary Awareness Association in the systematic design, development, administration, and evaluation of preventive health promotion programs. Information was gleaned from a review of health promotion, social marketing, and AIDS-related literature; consultations with health promotion practitioners; and workbooks provided by national health organizations. A first copy of the workbook was developed through formative consultation with an internal working group from AIDS Calgary. The draft copy and a Workbook Evaluation Instrument were given to three external reviewers for summative comments. A second draft was resubmitted to the first two groups and a third group of external reviewers. From the comments of all reviewers, the workbook was determined to be ready for use. Recommendations for the improvement of practice included the request to apply process and product evaluation to confirm the workbook's content and construct validity. Appendices provide an explanation of the Simple Systems Model; a Health Promotion Model (Source: Uganda Work Experience); copy of the letter sent to national health promotion organizations with a list of organizations contacted; the workbook evaluation instrument; and the final product--the Health Promotion Workbook. (Contains approximately 55 references.) (Author/LL)

Journal Announcement: RIENDV94

A survey, completed by 15 professors of English, indicated a fundamental lack of student critical thinking skills within their department, and a 90 percent discrepancy in teacher training with only 10 percent of teachers having received formal training. This paper describes a workshop designed to educate and motivate the English professors in a small community college to teach critical thinking and problem solving skills. Program strategies included motivating faculty involvement through collaborative empowerment, positive reinforcement, personal communication, and voluntary participation. The workshop included instruction on practice in proven critical thinking teaching methods, a handbook of teaching strategies, research articles and resources, and post-workshop discussion meetings. Subsequent to workshop implementation, a second survey showed that participating instructors observed improvement in student critical thinking skills, and 100 percent reported increases in their own knowledge, awareness, motivation, and use of critical thinking teaching methods. The project also served as the start of an "across-the-curriculum" drive to infuse critical thinking into all courses at the college. Appendixes provide pre- and post-workshop surveys, survey results, post-workshop faculty feedback, workshop agenda, and the handbook's table of contents. (Contains 23 references.) (Author/LL)

KR KNIGHT-RIDDER INFORMATION

training, the teachers began to incorporate other instructional strategies. A questionnaire administered to six social studies teachers showed that five out of the six teachers used the text or notes based on the text on average 40 minutes out of every 50 minutes, and a questionnaire of 30 middle school students showed that 28 of the students studied questions from the end of the chapter. After administration of the questionnaires, teachers and students were trained in the use of innovative instructional strategies. The results indicated that the students spent approximately 1.5 periods per week using alternative strategies and resources other than the text. The teachers learned at least two new instructional strategies such as KWL and conceptual mapping. Resources used besides the text include the computer lab, newspapers, reference as well as authentic literature experiences, and hands on projects. All six of the teachers indicated in the post-questionnaire some growth using alternative resources and feeling comfortable using at least one strategy to some extent. (CK)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcements: RIENOV94
This practicum was designed to change parents' attitudes toward their children's learning, so that parents would understand the importance of student-centered and student-directed learning activities and have a better understanding of their children's actual learning activities. An initial telephone survey of four parents of students in a combined grade two-three class found that three considered teacher-directed activities more conducive to learning than student-directed activities. To help change this attitude, a 12-week program of increased teacher-parent interaction on the students' reading, spelling, and mathematics activities was implemented. This included having the teacher work with individual students on an activity during a parent visit to the classroom, sending photographs of a classroom activity

home with students, and writing letters to parents about classroom activities. A questionnaire was forwarded to the parents of 21 students at the end of the program, with the goal of having the parents of at least 11 students express favorable attitudes toward student-directed active learning. Although 10 of the 11 responses were highly or somewhat supportive of active learning instruction, the poor response rate resulted in none of the four expected outcomes being achieved. (A copy of the parent questionnaire is appended.) (MDM)

This practicum was designed to develop a transition program and social activities for sixth-graders to help ease the passage from elementary school and increase their sense of belonging in a sixth- through eighth-grade junior high school. The students were surveyed concerning their degree of self-esteem, connection to school, perception of opportunities for social interaction with their peers, and perception of opportunities to develop excellence. Parents and teachers were surveyed concerning program development and implementation. Various social activities were developed or opened up to sixth-grade participation, including school spirit days, cross-country, band, intramural athletics, art club, and yearbook committee. The results of the intervention were mixed, with student and teacher attitudes remaining largely the same before and after program implementation. The physical and educational isolation of the sixth-grade students and teachers in the school building, as well as friction between teachers and the school

(cont. next page)

administration, were seen as contributing factors to low levels of school spirit and morale among a large segment of the sixth-grade student and teacher population. (Eight appendices contain copies of the student, parent, and teacher surveys, the results of these surveys, and a record of student participation in program activities.) (MDM)

ED371873 PS022475 Increasing Teacher/Parent Awareness of Developmentally Appropriate Movies for 3-6 Year Olds through Use of a Rating Scale. Truxal, Marilyn R.

1994 45P. : Ed.D. Practicum Report, Nova Southeastern University.
Language: English
EDRS Price - MF01/PC02 Plus Postage.

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Pennsylvania

Journal Announcement: RIENOV94

This practicum identified a lack of standards for movie viewing by children age 3 through 6 at a preschool child care center, and proposed a rating scale to determine the suitability of videotaped films. Staff and parents of students seemed unaware of potential long-term adverse affects of some movies, such as desensitizing children to violence, providing stereotypes that children will imitate or model, and possibly fostering misconceptions. A rating scale was developed that graded films on theme content, production quality, violence, language/role modeling, and stereotypes. A rating of at least 81 out of a possible score of 100 was considered the minimum for recommended viewing. Forty movie videos and television programs were rated, with the results dispersed to parents and staff at the center. Twelve of the 40 movies and program received a score of 81 or higher. It was noted that some movies produced by the Disney Corporation and other family-orientated distributors did not meet the minimum score, even though the films were geared toward preschoolers. (Three appendixes provide a list of familiar movies for 3- to 6-year-olds, a movie rating tally sheet, and the ratings of 40 movies and television programs.) (MDM)

ED371854 PS022449 Bridging Adult Differences through a Problem-Solving Approach to Toilet Learning with Toddlers. Comeau, Rebecca

1994 42P. : M.S. Practicum Report, Nova University.

EDRS Price - MF01/PC02 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida

Journal Announcement: RIENOV94

This practicum addressed the problem faced by a child care center in dealing with parents from various ethnic backgrounds who possessed different views on toddler toilet training. The goal of the 10-week project was to establish an environment in the toddler program that allowed teachers and parents to approach toilet training cooperatively. During the first week, parents and teachers were surveyed about their attitudes toward toilet training, from which staff developed a plan of action for working with each parent. Staff then provided parents with educational materials on toilet training and initiated weekly communications between parents and teachers concerning each child's toilet training experiences. The strategy empowered the parents and teachers to identify and resolve issues regarding toilet training, successfully reducing conflicts between parents and teachers. (Four appendixes provide copies of the parent and teacher surveys as well as toilet training observational journals and logs.) (MDM)

As a practicum project, an elementary school counselor developed and implemented a parent education program centered on the use of parents as models and peer facilitators for other parents. Based upon a survey of parents' self-professed needs, the program focused on parenting skills designed to help children avoid such high-risk behaviors as alcohol and drug use. Workshops were held for five parent volunteers to acquaint them with PRIDE Parent Training's Parent to Parent video course on alcohol and drug abuse prevention. These parents would then use the videotapes and supporting materials with other neighborhood parents in peer group meetings. Although no peer classes were held, several were scheduled for the following school year, and parental involvement in school activities increased due to interest in the program. (Three appendixes provide copies of the parent survey, along with program evaluation forms in English and Spanish.) (MDM)

Improving the Transition of Students Moving into Sixth-Grade through a Middle School Orientation and Peer Helper Program.
Pettit, Nancy

1994

54p.: Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIENOV94

An orientation and peer helper program was developed at a public middle school in a rural community to reduce the problems associated with sixth-grade students transferring to the school during the school year. Transfer students and their parents or guardians were provided with a video and brochure that explained the school's services, programs, and requirements. In addition, a peer helper club was designed to match the transfer student to a peer helper with similar interests. The peer helper served as a mentor and friend to help the transfer student with homework, classwork, and social activities. Four of the 8 transfer students entering the school during the 12-week implementation period participated

in the program. A teacher, the transfer students, and peer helpers met every week or 2 for 15 minutes to implement various activities, such as role playing and journal writing, to help the transfer students through the transition period. Transfer students, their parents or guardians, and their teachers evaluated the program after 12 weeks. The transfer students expressed positive attitudes about their new school, and had a better understanding of what was expected of them in academic classes. Teachers indicated that the orientation program was helpful and expressed an interest in seeing all transfer students participate. Parents also found the video helpful. All participants liked the peer helper club best. (AC)

Decreasing School Suspensions among Middle School Children by Implementing a Rehabilitation Initiative In-Room Suspension.
Novell, Ireneanne

1994

152p.: Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC07 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIENOV94
This practicum report describes a 15-day in-room suspension strategy designed to reduce the increasing number of principal-initiated student suspensions resulting from inappropriate conduct. The program's distinguishing features entailed a central figure who predetermined the candidates by means of a pre-suspension interview, parental-student involvement and choice, and the student's motivation for avoiding an impending principal's suspension. A contingency contract delineated the conditions that necessitated pupil isolation, while promoting structure and a guidance curriculum that featured communication skills. It also introduced, through a point system, a behavioral modification strategy that conceivably reduced the duration of the in-room suspension from an unprecedented 15 school days to 10 days. The program [1997] was rehabilitative rather than punitive in design. Analysis of the program data revealed an impressive improvement among those in need of academic structure and a minimal effectiveness among reluctant participants. An accomplished (cont. next page)

teacher-in-charge, parental involvement, and continual intercommunication contributed to the program's success. The report's 11 appendices contain: (1) the program proposal; (2) the contingency contract; (3) an explanation of the point system; (4) an anecdotal or point system form; (5) an evaluation summary of the assignee; (6) the questionnaire key, and results to the pretest-posttest sample of attitudes; (7) the teachers' survey and results analyzing attitudes of the IRS-RISC participants; (8) a student-parent interview critique; (9) the modified contingency contract; (10) the student progress sheet; and (11) the assignment format. Contains 60 references. (TJQ)

ED371829 PS022383 Enhancing the Fiscal Outlook of a Nonprofit Agency through Board of Training, Fundraising Techniques and a Marketing Plan.

Farquharson, Patrice E.

1994
67p.; Ed.D. Practicum Report. Nova University.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIENOV94

This practicum focused on improving the funding of a state-supported non-profit day care center through the development of a marketing plan, enhanced fundraising techniques, increased involvement by the center's board of directors, and heightened community awareness. To accomplish these goals, board members were interviewed and encouraged to use their influence and contacts to seek new sources of funding and donations for the center. A grant application was sent to a local agency to provide funding for a program development consultant. An illustrated brochure about the center was produced and distributed to local businesses, organizations, and individuals to attract donations of money or materials. A videotape of the day care program was also produced and shown on a local television station to increase community awareness of the center and to attract financial support. These developments led to a more than five-fold increase in funding and donations to the center in the four months after the program took effect. Board member and

community involvement also increased. (Eight appendixes provide copies of correspondence, interview questions, and an abstract of the grant proposal.) (MDM)

Language: English
Document Type: DISSERTATION (040)
Geographic Source: U.S.: New Jersey
Journal Announcement: RIENOV94

An intervention project sought to lower the grade retention rates of kindergarten, first-, and second-grade students in one New Jersey school district. During three school years, 1987-1990, the retention rate was 7 percent of the total population of these grades. An exploration of causes identified several possible factors, including: (1) lack of preschool experience; (2) developmental immaturity; (3) increased academic expectations; (4) absence of full- or extended-day kindergarten; (5) developmentally inappropriate teaching techniques; (6) classroom management; and (7) organizational factors. Social and environmental variables cited were: (1) behavioral problems; (2) lack of effort and motivation; (3) family transience; (4) low socio-economic background; (5) poor academic achievement; (6) limited experiential background; and (7) various learning disorders. Following a review of current applicable research and classroom monitoring that assessed student achievement, instructional procedures, classroom management, and teacher effectiveness, four terminal objectives were developed to reduce the retention rate from 7 percent to 3 percent or less. Staff development, the work of the intervention committee, and the implementation of whole-language, cooperative learning, developmentally appropriate instructional practices, and the writing to Read program all served to accomplish the objectives of the project. At the end of the 1992 school year, the retention rate was 1 percent of the kindergarten, first-, and second-grade population. (Contains 95 references.) (TJQ)

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE
(160)

Geographic Source: U.S.; Florida
Journal Announcement: RIENOV94
This practicum was designed to address a problem in a teacher education program where case study experience for education students to learn to diagnose learning disabilities was limited and difficult to provide due to such problems as course scheduling, transportation in a rural area, and identifying appropriate children for study. Participants included undergraduate and graduate students, school district resource teachers, and faculty instructors. Practicum goals were to improve case study experiences for preservice education students learning to diagnose the nature of learning disabilities in school age children and youth; enhancing inservice teacher training; and facilitating the use of technology across the curriculum in the teacher education programs. With the available technology in the school of education, a computer simulation for case study was implemented. The vast majority of students found computer simulation case study to be an easy-to-use and effective tool in the education program. Included in the appendices are questionnaires used in the evaluation of the simulation. (Contains 43 references.) (Author/JLB)

This practicum was designed to increase elementary education interns' use of video technology within the science curriculum. Interns from previous semesters were not using technology within their final semester projects, and most were not comfortable using technology. The purpose of this practicum was to increase the scientific and technological literacy of the interns and develop a positive attitude toward the use of technology within their instruction. Within this practicum, the interns had the opportunity to develop the skills and confidence needed to be technology literate. A cooperative training program with the local public broadcasting station was developed, and instructional video technology was modeled within the weekly course presentation. Also, a video technology resource room was created for the interns. Analysis of the interns' final thematic unit presentation indicated an increased use of video technology, and, through a reflective attitude paper, all the interns stated an increased comfort level for using technology within the curriculum. (Contains 35 references.) (JLB)

 Journal Announcement: RIENOV94
 A practicum project was developed and implemented to teach information retrieval literacy skills to Grade 12 regular English students in a public high school. The research skills that the students were learning by mastering the electronic information systems in the school media center were used to research a "real world" problem to be written up in a student newsletter. The target group of 105 regular English students (85 by the end of the project) included nonnative speakers. Project implementation strategies involved collaborative learning in heterogeneous groups--collaboration was on every level, from choosing the research topic, to locating the information on the electronic retrieval system to mastering the skills of correct research report writing. Notes and drafts for the research projects and a journal entry by each student served as a check on the project. Students decided the newsletter format, spacing, and typesetting, and completed paste-ups of the prototype newsletter. When the newsletters were published, each group made a presentation of its "survival guide" newsletter to the whole class. Among recommendations for the future are: (1) skills for research writing and publishing should be mastered before the project begins; (2) project should be made available to the English department head for use and shared with the school media specialists; and (3) the county's newly adopted competency-based curriculum should include this project as an alternative to the traditional research report now required for 12th-grade classes. (Contains 30 references; appendixes include interviews, data, and surveys.) (NKA)

 A practicum designed to increase the expertise of primary teachers in the creation of developmentally appropriate reading/writing curriculum for the multi-age, multi-ability, primary classroom through literacy training staff development sessions. The system of literacy training was constructed over a period of eight months with 34 primary teachers from three elementary schools. Staff development training sessions on early literacy and authentic assessment using the running record were developed. Pre/post questionnaires, change assessment scales for administrators, a literacy plan of action for local schools, running record scripts for assessment training, literacy lessons, and developmentally appropriate curricula were administered or developed. Analysis of the data revealed that after the staff development training on early literacy (cont. next page)

Information on child development, the development of the writing process, and prekindergarten whole language. A series of workshops were developed for the prekindergarten teachers on child development, whole language, portfolio assessment, and the development of the writing process. Other strategies included information brainstorming, organization of centers to provide writing opportunities, and acting as a resource person to provide support to teachers. Analysis of the data revealed the teachers had a better understanding of how the writing process developed and interrelated to language and reading. Through this understanding, writing opportunities increased in the prekindergarten classroom. (Contains 16 references and three tables of data. Teacher surveys, an observation form, a portfolio checklist, and outlines for a workshop on whole language, the development of writing, and portfolio assessment are attached.) (Author/RS)

Journal Announcement: RIENOV94

A practicum was designed in response to the increasing numbers of at-risk middle school students lacking appropriate academic skills as well as the motivation to learn. A small-group reading intervention program was implemented to help underachieving students increase their success rate on a mastery level. Targeted students were sixth graders, in the regular education program in a middle school (in a large southern public school district, 93% non-white), functioning approximately one year behind in reading. From this population strategy instruction was provided to six small groups (2-5 students) over a 10-week training period. During the 8-month implementation phase a total of 18 students, referred by their reading teachers for lack of progress, met once a week at their regularly scheduled reading class time. The strategy instructor taught procedures for reading as well as more general strategic processes to facilitate learning, personal responsibility, and student motivation. Pre- and posttests were administered individually, and an informal interview was conducted with all participants. A behavior rating scale was developed using reading teachers as informants. Analysis of data revealed that comprehension and memory for what was read increased for all 18 participants after cognitive strategy training. Increase in strategy use, improved class participation, oral reading, comprehension, and self-evaluation were also noted. Although results suggest program

effectiveness, determination of whether generalization or maintenance of appropriate behaviors will occur are difficult due to the short-term nature of the intervention. (Contains 78 references. The behavior rating scale is attached.) (Author/RS)

Providing Grief Counseling with Inner City Elementary Aged Children Whose Relative Was Murdered because of Gang Violence.
Steward, Cherie A.

1993
64p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; California
Journal Announcement: RIENOV94
This practicum addressed the problem that many inner city elementary students dealt with on a daily basis. The objectives were to increase the students' ability to express their grief, concentrate on class work, and to decrease their wanting to hurt others because they felt angry or hurt. The writer administered a questionnaire to teachers and parents, consulted with teachers and parents, and developed and supervised a grief counseling program for students. The overall results of the practicum were positive with 91% of the elementary students being able to express their feelings about grief to a very high level. Further analysis indicated that 90% of the parents increased the overall time they spent with their children, so the students expressed their grief more often with their parents. Also, 70% of the teachers reported an overall decrease in students' initiating fights with their peers when they felt angry about a relative's death. The grief counseling experiences were positive for all of the students, parents, and participating teachers. The initial, individual consultations with teachers set the stage for a cooperative partnership between the teachers, students, and writer. (Author)

ED371285 CG025576 Improving Parental Coping Skills during the Adjustment Period: A Model Divorce Education Program.
Abood, Faye

1994 64P.; Ed.D. Practicum. Nova Southeastern University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English.

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Ohio

Journal Announcement: RIENOV94

The design of this practicum was to address the problem of parents obtaining a divorce who did not possess coping skills and who sometimes misdirected their frustration and anger at their children. Often, children felt responsible for the divorce and experienced a profound sense of loss and confusion. The major goal realized in this practicum was that divorcing parents learned to channel their anger into more positive emotions and learned how to communicate effectively with their children. The following tools were developed for this practicum: (1) a parent survey; (2) 12 interactive work classes for divorcing parents; (3) appropriate handouts; (4) a personal information form for children of divorced parents; and (5) a parent informal interview form. Analysis of the data demonstrated that the divorcing parents became more aware of coping skills during this transition period and were able to direct their frustration toward positive outlets. In addition, there was a decrease in the number of anger incidents directed at their children. (Author/MSF)

Journal Announcement: RIENOV94

A practicum was designed to provide a program for a small group of fifth- and sixth-grade Hispanic girls to develop their awareness of nontraditional career options, gender role stereotyping and decision-making skills. This program was offered in an elementary school located in the suburbs of a major southwestern city. Self-esteem, assertiveness, and decision-making skills were introduced as means of supporting choices made independent of traditional female roles. The program consisted of a variety of weekly lessons that included lecture and discussion, paper-and-pencil activities, role plays and student interactions, books and videos, activities and games, and guest speakers. An analysis of pre- and post-test results revealed an increase in career awareness, gender role stereotyping awareness, and self-esteem and assertiveness for a majority of the girls. Pre-test levels of gender role stereotyping awareness and self-esteem were higher

EDRS Price - MF01/PC06 Plus Postage.

The Pennsylvania Department of Education mandated that all school districts in the state include K-12 instruction about Acquired Immune Deficiency Syndrome (AIDS) and related issues beginning in September 1987. This paper describes one school district's comprehensive AIDS education program. A Survey administered in the fall of 1991 produced information about a lack of knowledge of AIDS policies among high school staff and in the community. According to data analysis, the curriculum was not being taught at all mandated levels, and teachers and principals felt a lack of knowledge about AIDS education and district policies and procedures. As a result, the school became actively engaged in enhancing the AIDS education of administration, staff, students, parents, and community groups; an AIDS Curriculum Committee and a Teen AIDS Peer Group were established; and topics such as policy issues and community resources were major topics for AIDS inservice programs. Appendixes include the Pennsylvania State AIDS Mandate, the school district's AIDS policy, an elementary school AIDS instruction summary, parent letters for AIDS instruction, grades 8-12 pre/post AIDS instruction test; staff and parent surveys; a school district AIDS survey, and curriculum revisions. (Author/LL)

ED370738 RC019633 Improving the Identification of American Indian High School LEP (Limited English Proficient) Students through the Creation and Use of a Site-Normed Direct Assessment of Writing.

Fischer, David L.

1993

108p.; Ed.D. Practicum, Nova University. Appendix D containing student writing samples may not reproduce clearly. EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Arizona
Journal Announcement: RIE0CT94

The language arts department of an Arizona high school serving American Indian students developed a locally normed writing assessment to comply with a state mandate for the identification of limited English proficient (LEP) students. The members of the language arts department decided on a direct assessment of writing in which the student would respond to a set of comprehension questions about a story with cultural relevance for the school's population. Two forms of the test were developed, each containing a literal question, an interpretation question, and an evaluative question. The reading prompts chosen were culturally relevant and easy to read. Holistic scoring procedures based on a six-point scale were developed through pilot testing with English-as-a-Second-Language students. The majority of the school's students then took the test to develop local norms. Two trained scorers independently scored each sample, with a third scorer used when scores differed significantly. Steps were taken to reduce the chance of scorer drift, scorer bias, and scoring errors of leniency and central tendency. High interrater reliability was achieved, with over 60 percent of scores differing by 0 to 1 point. Appendixes contain both forms of the test, scoring sheets, anchor papers, directions for administration, and scoring rubrics. (KS)

Journal Announcement: RIE0CT94

This practicum was designed to improve adult skills in facilitating science learning in preschool children by improving teaching staff and parent understanding of active learning and science processes. A series of workshops was presented to pre-kindergarten teachers, family home child care providers, parents, and college students preparing to become early childhood teachers. The workshops consisted of hands-on demonstrations of science activities and learning strategies for preschool children that can be implemented at little cost using readily available household materials. Workshop participants were enthusiastic about the activities and strategies, with post-intervention surveys indicating that they increased the number and frequency of science activities in their classrooms and homes. Seven appendixes provide copies of the survey forms, workshop evaluation forms, journal review checklists, classroom observation checklists, weekly activity plans, workshop plans, and a resource list. Contains 35 references. (NDM)

Journal Announcement: RIE0CT94
A study was conducted to assess the needs of adult learners at Gateway Community-Technical College (GCTC), in North Haven, Connecticut. An extended literature review resulted the choice of the three-part Adult Learner Needs Assessment Survey (ALNAS). In spring 1993, the ALNAS was administered to adult learners in classes at GCTC, resulting in 400 completed surveys representing 70% of the adult population at GCTC. Results for the first section of the ALNAS, which included inquiries into participants background, indicated that 65.3% of respondents were between the ages of 23 and 44, 77% of respondents were male, and 69.4% of respondents did not have a college degree. Results for the second section, which investigated the educational plans and references of participants, indicated that 77% of respondents planned to continue their education, 52.3% of respondents cited improving their income as a major reason for continuing their education, while 54.4% reported that learning to solve personal and communication problems was not a reason. Results for the final section, focusing on the personal and educational needs of adult learners, indicated that the five most important issues were improving writing, test taking, study, and mathematical skills and learning about job opportunities, while the five least important issues were obtaining child care services, coping as a single parent, navigating the campus, dealing with divorce, and obtaining services for a physical disability. The survey instrument, transmittal letter, and results of ALNAS are appended. (MAB)

(cont. next page)

This Practicum addressed the problem of fourth grade students who watched their fingers and used the "hunt and peck" method while answering questions in curriculum-based software. The following objectives were established: at the end of the 15-week practicum period, all of the 22 targeted students will demonstrate at least 80% accuracy in correct finger placement on the alphabetic keys; and all of the 22 targeted students will apply their keyboarding skills in a word-processing situation. The solution strategies included a mnemonic approach to teach the entire alphabet keyboard in one lesson; age-appropriate drills and games; a project for reinforcement of the mnemonic lesson; and a computer program for practice. The success of the program was measured by the results of a pre- and posttest, teacher observation of keyboarding techniques, and students' use of keyboarding skills in critical-thinking skills applications. Although the stated objectives were not met, it was concluded that the program was a success because the students who displayed good effort succeeded by displaying keyboard mastery and application. Poor effort on the part of the students who did not meet the stated objectives mainly contributed to their low scores. (Contains 20 references.) (Author/MES)

Geographic Source: U.S.; Florida
Journal Announcement: RIE0CT94

The entry level cardiovascular condition test scores of 45 cadets at the Criminal Justice Training Institute (Florida) were compared with test scores after the cadets participated in a 15-week conditioning program. The test consisted of running, push-ups and sit-ups, and bench and leg presses. The conditioning program was designed to increase cardiovascular endurance and reduce stress, and ultimately, increase the fitness and longevity of the cadets. Results verified that there was a significant difference between pretest and posttest cardiovascular condition test scores. Cadets demonstrated that they were more aware of their conditioning level and of the importance of cardiovascular conditioning and physical fitness as a stress reduction method. The report

This practicum reports on the development of a support network for parents (n=34) of students with learning disabilities at a private rural elementary school. The program focuses on providing essential information to parents and increasing their involvement within the school setting. The program involved: (1) monthly meetings of parents; (2) creative projects involving parents and children working together; and (3) development of improved communication channels among students, parents, teachers, and the school. Success of the program was measured by comparisons before and after program implementation utilizing a School Involvement Parent Questionnaire, school records, and a Background Assessment instrument. A 30 percent increase in average scores was measured on the Background Assessment. A 15 percent increase in parental volunteers in the classrooms and a 12 percent increase in parental attendance at school-wide functions were also exhibited. A 25 percent increase in positive responses on the parent involvement questionnaire indicated increased parental engagement in creative projects. Extensive appendices include the measures developed for the study, results of telephone polls, specific results for each question on the questionnaire, letters and materials used to develop the program, and results of the Background Assessment (DB).

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIE0CT94

A practicum was executed with the primary purpose of enhancing prekindergarten students' ability to address conflicts in a positive prosocial manner. The location of the practicum was an urban elementary school which houses prekindergarten through grade 6. A literacy program consisting of storytelling activities using the various forms of children's literature, role playing, puppetry, flannel board, organized games, and physical movement) and a citizenship program providing opportunities for students to be distinguished for exhibiting appropriate social behavior were implemented during a 12-week period. Students completed conflict inventories near the beginning and end of the practicum period. Students were also observed during "choice time" and recess. Results indicated that: (1) inappropriate acts of conflict before the practicum numbered over 30 per day and dropped considerably during the last 4 weeks of the practicum; (2) students' ability to determine the appropriate course of action in the event of a conflict increased significantly; and (3) students received both programs with much enthusiasm. (Contains 52 references and 4 tables of data. A record form for observations, the conflict inventory test pictures, and a 44-item bibliography of children's literature are attached.) (RS)

Enhancing Higher Educational Opportunities for Secondary School Minority Students: A Precollege Program.

1993 149p : Ed.D. Practicum. Nova University.

EDRS Price - MFO1/PC06 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIE0CT94

This practicum was designed to assist African American and Hispanic students and their parents to become aware of the preparations, procedures, programs, and resources requisite for enhancing educational opportunities. The major outcomes of the practicum were: (1) to increase the number of minority students applying to postsecondary institutions; (2) to expand the pool of minority students taking standardized college admissions examinations; (3) to develop an awareness in 9th grade of postsecondary options for African Americans and Hispanics; and (4) to inform the parents of minority students about postsecondary education in order to prepare them to assist their children in making informed career and college-related decisions. A 15-component program geared to meet the needs of African American and Hispanic students and their parents was developed and implemented. Pre- and post-implementation surveys were administered to student and parent participants. The solution strategy utilized students, parents, teachers, counselors, speakers, and mentors to inform African American and Hispanic students and their parents about postsecondary options. Analysis of the data revealed that precollege program participants significantly increased the number of their postsecondary applications and greatly expanded the pool of students who took standardized admissions examinations. In addition, both 9th-grade minority students and minority parents were able to demonstrate an increased awareness of postsecondary opportunities as a result of participation in the precollege program. (Author/RJM)

Decreasing Physical and Verbal Aggression in Fifth Grade Students through Conflict Resolution Training.

Cassell, Joan R.

(cont. next page)

FAU/PDC instructors during the introduction to the family-focused practice training sessions. The survey showed that overall, the communications were well-received by HRS employees and they were well aware of policies. The assessment instrument proved an efficient and valid method of identifying the effectiveness of HRS policy communication and employee attitudes toward that policy. As a result of the study, it was recommended that the juvenile justice curriculum be revised to include administration of the OCP survey. The instrument is also appropriate for future comparison of the policy communication strategies of other HRS departments, through their training partners, to their employees. Finally, it was suggested that HRS review its current method of policy dissemination to determine the feasibility of including training and development planners in the early stages of policy development. (The survey instrument is included in the report. Contains 18 references.) (KC)

ED369722 S0023977
Improving the Critical Thinking Skills of Ninth Grade World History Students by Integrating Critical Thinking Skills and Course Content.
 Milton, Henry
 1993
 82P.; Ed.D Practicum, Nova University.
 EDRS Price - MF01/PC04 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.: Florida
 Journal Announcement: RIESEP94
 Target Audience: Teachers; Practitioners
 This document describes a practicum that was designed to incorporate student mastery of eight critical thinking skills. Their definitions and nature of applicability, with the regular class material, and within the normal scope and sequence of ninth grade world history by introducing each skill concurrent with subject matter, thereby improving students' academic prowess by enabling each to function at more advanced levels of Bloom's "Taxonomy of Educational Objectives." An analysis of the results of the "Cornell Critical Thinking Test, Level X" and a teacher made questionnaire clearly indicate that students spend more time engaged in the memorization of course content than in analyzing, synthesizing, or evaluating it. During the course of implementation, students in the ninth grade world history course were sequentially presented with eight different historical themes, each accompanied by the rules for mastering, then applying a different, specific critical thinking skill. The skills were: (1) identifying frame of reference; (2) locating crucial elements inherent in an issue; (3) distinguishing between evidential and speculative basis for conclusions; (4) identifying main concepts; (5) identifying assumptions; (6) identifying implications and consequences; (7) distinguishing between fault and justified inferences; and (8) synthesizing material. During the course (cont. next page)

The Development and Implementation of a Training Module To Increase the Awareness of Assistive Technology.
 Alexander, Gwendolyn Bellamy
 Dec 1993
 79p.; Masters Thesis, Nova University.
 Language: English
 Document Type: THESIS (042)
 Geographic Source: U.S.: Florida
 Journal Announcement: RIESEP94
 This paper reports on a training program that was developed and implemented to increase awareness of training needs in the area of assistive technology. A survey was developed and distributed to Local Assistive Technology Specialists (LATS), paraprofessionals, teachers, administrators, parents, preschool teachers, and service providers throughout Florida. Results provided the nucleus for determining the development and implementation of a training module in assistive technology. A target group of 25 LATS representing various districts in Florida was selected for the study. The project included the compilation and compilation of a questionnaire and participation in an assistive technology awareness workshop. Success was measured by comparing pre- and post-test results and attendance logs derived from two regional assistive technology awareness workshops. Appendices provide: glossary of related terminology; Awareness Workshop pre- and post-tests; Awareness Workshop attendance logs; training needs

of fulfilling the specific exercises attached to each theme. Students applied each specific critical thinking skill. Working in small groups on some occasions and independently in others, periodic measurement was accomplished by both written and oral presentations. Analysis of post-test data indicates that students progressed from intellectually functioning at the more basic levels of Bloom's taxonomy to the more advanced levels. (DK)

Improving Knowledge and Competency of Early Childhood Providers Through an In-Service Multicultural Bilingual Program.
Regnatto, Emilia
1993

51p.; Ed.D. Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: DISSERTATION (040); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: Florida
Journal Announcement: RIESEP94

This practicum was designed to provide a multicultural bilingual inservice training program for the staff of six early childhood centers serving a large Hispanic population. The inservice training consisted of weekly seminars, guest lectures, classroom observations, and feedback interviews with center directors and executives of agencies that cater to a Hispanic clientele. Assessment instruments were developed and administered to evaluate the teaching knowledge and competency of the 10 participants before and after the intervention. Pre- and post-intervention tests demonstrated that all 10 participants increased their teaching knowledge and competency, especially in relation to the importance of a bilingual, multicultural approach to teaching. Three appendixes contain questions asked of agency executives, questions asked of center directors regarding their perceptions of the care givers on their staff, and a copy of the teaching practices assessment instrument. (NDM)

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP94

A journal announcement was designed to give third-grade teachers a way to incorporate into the standard school day ongoing assessment techniques. The teachers used portfolios of the 140 children's work as an important, tangible and readily accessible record. The development and presentation of eight monthly workshops and ongoing classroom demonstration and support of portfolios addressed the individual child's needs in a personal, language arts integrated manner, needs which stemmed from community cultural differences and linguistic orientation. The practicum provided the teacher with a way to establish and manage a classroom climate for continuous portfolio assessment approach and cooperative/collaborative writing to Learn Centers. Lesson plans were formulated from writing activities related to real purposes, interests, motivation, and needs of the children, connecting school, home, and community. Interactive family assignments, parent/child/homework workshops and ongoing parent/teacher/child conferences were instituted to assist children and parents with the purposes and functions of varied forms of written communication. The practicum succeeded in providing an effective continuous assessment approach, as a positive supplement to the current reporting system. As a result of the workshop programs supplementing the writing curricula and the ongoing child/teacher conference time, there was a marked increase in the children's enthusiasm, confidence, and writing output. The children also demonstrated much improvement in the quality of their writing, and the parents became active participants in their children's writing development. Contains 92 references and five tables of data. (RS)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP94

A practicum addressed the problem of a lack of continuity and consistency in the evaluation of students' papers in grades 6-12. A cohesive, systematic writing evaluation model was designed and implemented for grades 6-12. Teachers, administrators, students, and community members collaborated in the development and implementation of the writing evaluation model. Students and language arts teachers were trained in the utilization of the writing evaluation model. As a result of using the model, teachers and students became both more involved in the process of writing and more consistently effective communicators about the evaluations of students' papers. Having a clearly defined set of guidelines added continuity and consistency to the school's writing program. (Contains 24 references; faculty and student evaluation forms, the writing evaluation student response form, and the student rating scale are attached.) (RS)

Journal Announcement: RIESEP94
A practicum was developed to improve the inferential comprehension, the textual and functional skills, and the overall attitudes toward reading of fifth-grade students. A target group of six students in a private school who were deficient in these skills was established. The practicum contained basic strategies for improving reading skills and academic achievement; a change to a literature-based approach to reading; incorporation of the teaching of skills; the change from homogeneous grouping to heterogeneous classes; a (cont. next page)

one-on-one system for reading practice; journal writing; sustained silent reading; and a special Book Readers' Club through which students promoted, to fellow students, their interest in books and reading. Results indicated that: (1) 83% of the targeted students improved their reading attitude by 20%; (2) the recreational reading attitudes of 83% of the targeted students improved by 10%; (3) the inferential comprehension skills of 83% of the targeted students improved; (4) the objective that the textual and functional reading skills of 50% of the targeted students would be improved by 10% was not met; and (5) all of the students increased their reading of books by more than 50%. Students in the practicum reacted favorably to the change in the reading program, both in measurable and unmeasurable ways. The mood and tone in the classroom was positive and promoted camaraderie where once there was competition. (Contains 19 references and 6 tables of data. Appendixes of data, survey instruments, scoring sheets, and a sample lesson plan are attached.) (RS)

The goal of a practicum was to improve students' attitudes towards reading. Subjects, 35 third graders, were representative of the community's social composition. Activities encouraged increased reading time in and out of the classroom. Parents were asked to encourage their children to read and to participate by reading with them, to them, or discussing what was read. Pre- and post-surveys were administered to all student participants. Strategies were used to help students overcome language and decoding difficulties. Parents were encouraged to become involved in the improvement process. Participants in the practicum increased their reading time in the classroom as well as at home. A positive change of attitude was observed in many participants, though some maintained the opinion that reading is a boring activity. (Contains 18 references and two tables of data; sign-in sheets, survey instruments, and a reading log are attached.) (Author/RS)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP94
A Practicum was designed to enhance students' knowledge of well known children's literature that is represented by the Newbery and Honor Award winning books. One fourth-grade and one fifth-grade class comprised of students reading at or near grade level at a metropolitan school with a nearly 97% Hispanic student population worked within a media specialist once a week. Pre- and post-surveys were developed and implemented. Test questions were developed to ascertain students' familiarity of Newbery titles. Teachers were encouraged to read Newbery titles to their classes. The media specialists "booktalked" several Newbery titles. A special area in the media center was designated to make Newbery books more accessible. An Early Bird Book Club and a Newbery Book Club were sponsored in which students could share Newbery titles as well as hear them read aloud. Contests and games were devised with paperback copies of Newbery and Newberry Honor books offered as prizes. Data analysis indicated that students' knowledge and familiarity of Newberry titles increased 365%. The teachers involved became advocates of reading aloud at the intermediate level. The Newbery books were circulated more at the school's media center and the local public library. The school-wide book fair sold out of several Newbery titles and reported that the Newbery titles sold more copies than at previous book fairs. (Contains 30 references; survey instruments, book title recognition tests, weekly activities, lists of Newberry winners, and a sample reading log.) (RS)

Journal Announcement: RIESEP94

A practicum was designed to improve the reading growth and achievement of 60 eighth-grade students who were one or more years behind grade level by utilizing CNN Newsroom and the "USA Today" newspaper as an integral part of the reading program. Pre- and posttests were administered to measure outcomes. The six areas measured were: (1) word meaning; (2) supporting ideas; (3) summarizing; (4) relationships and outcomes; (5) inferences and generalizations; and (6) point of view, propaganda, and fact/nonfact. In addition to CNN Newsroom and the "USA Today" newspaper, the reading program included Reader's Workshop whereby students read self-selected literature, and Reader's Theater. Analysis of data revealed positive results utilizing CNN Newsroom and the "USA Today" newspaper. Of the 60 students, 34 showed reading gains in two or more reading areas. CNN Newsroom and "USA Today" met the needs of many students. (Contains 27 references and two tables of data; reading assignment sheets, sustained silent reading forms, scoring sheets, and reading inventory are attached.) (Author/RS)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIESEP94

A practicum was designed to remediate reading skill deficiencies of four slow third-grade learners by using computerized instruction. The major goals were to increase instructional reading levels and reading comprehension; to remediate specific reading skill area deficiencies; and to increase collaboration among resource teachers regarding strategy planning and utilization of instructional materials with the slow learners. Pre- and posttests were administered over a 10-week period three times weekly for 45 minutes using the Minnesota Educational Computing Corporation's Writer word processing program. Parents and teachers collaborated to remediate the skill deficiencies of the four students. Books and written checklists were provided for home documentation of daily reading with parents; journal entries were kept as well as pupil logs and checklists regarding mastery of software programs. Analysis of the data revealed that scores were increased in post reading placement tests administered orally. Mastery of basal unit raw test scores on specific skill areas increased in eight areas on the Level 8, Unit 3 basal reading test, and by nine skill areas on the Level 8, Unit 4 test. One out of four students increased the raw score for reading comprehension by 10 points. Collaboration increased among teachers and parents, along with motivation and self-esteem among students. (Contains 28 references and four tables of data; four sample student stories and a letter to parents are attached.) (RS)

Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIIESEP94

A practicum was designed to motivate children to read and to read for pleasure. Since reading is considered an important part of the daily curriculum of an elementary school and spills over into every discipline taught, reading appears to be a key to success in all curriculum areas. An in-class model for delivering remedial assistance was used with 39 third-grade students. The goal of the practicum was that students express joy in reading and choose to read when given encouragement, choice in reading material, and time to read. Emphasis was placed on looking at the whole child from many different perspectives. Since there is never just one solution to a problem of lack of motivation, the desire was to incorporate many suggestions gleaned from the literature to design a holistic solution to the problem. A club theme was the umbrella under which many other parts of the program developed--parent involvement, self-esteem, writing, and performing. As a result of the practicum, students were reading with renewed interest and expressed this interest to teachers and parents. They responded positively on a reading survey and wrote positive remarks in their journals. (Contains 40 references and two tables of data; appendixes present a reading attitude inventory, a guide to journal response, student-parent contracts, a storytelling guide, reading log sheets, and other material associated with the club theme.) (Author/RS)

 A practicum was designed to solve the problem of the lack of desire to read and the poor quality of the reading of 65 inner city underachieving basic skills students. Objectives were to increase motivation to read among the students and to improve the quality of their oral, silent, and reading comprehension skills. Incentives for reading enjoyment were provided through

various activities where reading was a necessary component. Students were taken on field trips over an eight-month period. Reports about the trips encouraged both reading and writing. Dramatizations and costume parties depicting storybook characters enhanced reading. Fund raising activities were held so that students were able to buy books. While motivational activities were taking place, various reading strategies were used to ensure that reading skills were being improved. Exercises to teach how to find the main idea, how to infer what the author is trying to tell, and how to improve mechanical reading skills were employed. Each student's deficiencies were isolated and reading drills used to improve their skills. A plan was developed to give students learning opportunities to use reading for purposes of enjoyment. A student survey questioned whether the students accomplished this goal. Analysis of data revealed that the participants' oral, silent, and reading comprehension skills improved. Some students continued to dislike reading although most showed an increased desire to read as their reading skills improved. (Contains 22 references and two tables of data; appendixes present questionnaires, staff biographies, and assignment descriptions.) (Author/RS)

A practicum was designed to increase the utilization of an elementary school media center whose wealth of materials were seldom checked out or used, and whose facilities were used mostly for fixed library scheduled classes. Moreover, the media center's facilities were unattractive and uninviting to visit. The solution strategies involved organizing the media collection and printing an audio-visual handbook so that parents and teachers would know what was available in the media collection and utilize the materials. The media center's (cont. next page)

facilities were attractively decorated with seasonal displays and books. Sofas and chairs were added to make the media center more enticing to visit, browse, and read. Teacher incentives were held. Parents, teachers and significant others were encouraged to model a love for reading and read alouds to children daily. Reading incentive programs were utilized to encourage students to develop positive reading habits. As a result of the practicum, students visited the media center and devoured the printed word. The love and joy of reading was brought to young minds. Children checked out and read more books. Teachers became effective media center users. Parents visited the media center to check out books to read to children. What was once a dull, unattractive library space became alive as an attractive service agent. (Contains 17 references and two tables of data; appendixes present forms to record student information, interview schedules, and survey data.) (Author/RS)

Implementation of a Rural Program To Reduce the Drop-out Rate of 9th- and 10th-Grade At-Risk Students.
Stradford, Charmaine W.
Jun 1993
135p.; Ed.D. Practicum, Nova University.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; South Carolina
Journal Announcement: RIEAUG94

A program was developed to reduce the rising dropout rate of 9th- and 10th-grade students at Lewisville High School, a small rural school in Chester County, South Carolina. In the face of limited financial resources, the program manager coordinated existing services and networked with community agencies. School records, surveys, and questionnaires revealed that 45 students identified as at-risk had a variety of problems, including excessive failing grades, tardiness and absences, discipline problems, lack of self-esteem, and limited participation in school and nonschool activities. Aimed at providing students with success experiences and support services, program components included group and individual counseling sessions, field trips, peer tutoring, community speakers, teacher inservice training, career education, parent workshops, and business mentors. As a result of the program, the school dropout rate decreased from 7.2 percent in 1990-91 to 1.6 percent in June 1993. The target group showed significant decreases from January 1992 to June 1993 in the percentage of grades that were Ds and Fs, and also showed improvement in attitudes towards academics, as measured by the Coopersmith Self-Esteem Inventory. Recommendations for maintaining and improving the project are discussed. Appendices include results of student, parent, and teacher surveys; characteristics of potential dropouts; and other information relevant to program implementation. Contains numerous data tables. Improving Inservice Training for Summer Staff in an Early Childhood Center through Individual Professional Development Goals and Ongoing Training.
Kroehl, Candace Dlin
1993
63p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG94

This practicum focused on the problem of inservice training failing to meet the individual professional needs of a diverse summer staff in an early childhood center. The solution strategy utilized a needs assessment survey and consultations with staff members to determine areas of need and interest, the results of which were used to devise a series of three inservice meetings. Choices were built into the sessions to permit staff to select topics according to needs, interests, and learning styles. New staff were paired with peer-mentors to provide information and support on a continuing basis, and all staff were encouraged to pursue individual goals. Results of a post-test survey indicated that most of the staff were either moderately or very satisfied with the program. Although experienced teachers did pursue individual goals, the level of achievement varied greatly. Five appendixes provide copies of the inservice training needs assessment, inservice evaluation questionnaire, contents of the inservice manual, and schedules and descriptions of the inservice training sessions. This practicum sought to develop a consensus definition of what an after-school enrichment program should be, utilizing the Delphi Research Technique, which is designed to collect and synthesize group opinion in an anonymous, interactive, self-repeating, and self-adjusting manner. Three rounds of questionnaires were sent to 31 teachers, school administrators, parents, children, and public officials. Round 1 questionnaires were open-ended, and were returned by 21 participants. Round 2 questionnaires contained statements of specific program attributes gathered in the first round that could be modified, supported, or rejected by the participants. Seventeen completed this stage. Round 3 questionnaires asked the participants to rank-order the 5 most important attributes of an after-school enrichment program, and was completed by 17 participants. The result was a common definition of an ideal after-school enrichment program for elementary school students. (Two appendixes include copies of stakeholder correspondence and the after-school enrichment questionnaire.) (MDM)

Journal Announcement: RIEAUG94
The focus of this study was a survey of faculty and student use/needs of library services and user education at Daniel Library, the Citadel, the Military College of South Carolina. More specifically, the study sought to determine user information needs and how the library staff should adapt for meeting the educational and research needs of its clientele. Data were collected in separate questionnaires for testing three multi-part null hypotheses with one-way ANOVA. The student survey was pilot tested in spring, 1991. The population of the study was 141 faculty and 284 students. (cont. next page)

Journal Announcement: RIEAUG94
Document Type: PRACTICUM PAPER (043)

The purpose of this practicum was to effect a substantial improvement in the academic and social profiles of 12 seventh-grade and 6 eighth-grade students with specific learning disabilities who had been targeted as potentially high risk candidates for dropping out of high school. Within a holistically based intervention model, five student objectives were sought: passing grades in at least three academic subjects, two electives, and physical education; an attendance profile that configured to district-based guidelines; demonstration of appropriate social skills; and a satisfactory conduct record. The practicum comprised such interventions and activities as self-esteem and social skill training, career orientation, motivational techniques, peer tutoring/mentors, a parent telephone hotline, student progress reports, student tracking reports, and parent/teacher/student conferences. Expectations were exceeded at both the seventh and eighth grade levels in the areas of academics, attendance, and self-esteem. In addition, the eighth grade conduct objective was exceeded. The program has become an integral part of the exceptional education program in the practical setting. Appendices contain several forms for use in administering the practicum. (Contains approximately 70 references.) (JDD)

Journal Announcement: RIEAUG94
This practicum focused on preventing referral to special education by meeting the needs of kindergarten and first grade children identified with behavioral or academic problems in the mainstream classroom. The practicum emphasized: (1) early identification of potentially dysfunctional children; (2) development of individual education plans addressing affective and cognitive domains; (3) intensive teacher service; (4) redesigned classrooms and curriculum; and (5) parent involvement. A strategic planning team was formed including six kindergarten and first grade teachers, the school psychologist, the school social worker, an exceptional education teacher, the curriculum resource teacher, and the counselor. Training was provided to all 30 teachers beginning during the semester's preplanning period and continuing on a monthly basis throughout the semester. Topics addressed in the workshops included: controlling dysfunctional behavior, compensating for developmental lags, utilizing the newly created identification instrument, reviewing referral procedures, and designing strategies that work for an individual teacher. Evaluation indicated that teachers became familiar with new strategies and substantially increased use of these strategies following training. However, referral for special education evaluation increased slightly over the previous year. Appendices include a Student Behavior Inventory with Related Teaching Strategies, an inservice pre/post test, a preferred strategies inventory, and a classroom observation instrument. (Contains 47 references.) (DB)

Journal Announcement: RIEAUG94

This Practicum designed and implemented a program using art therapy to improve the social competency of elementary-aged children with attention deficit hyperactivity disorder and oppositional/defiant disorder. Students were in a special class for children with severe emotional disturbances. The children met once a week in art therapy sessions either individually or in pairs and were observed in structured and unstructured situations. A combination of art therapy, verbal associations, and role playing were used to help children interpret social cues, generate solutions to social dilemmas, and apply this learning in social settings. Analysis of projective drawings, interviews, and observations suggested that the children improved in the areas of interpreting social cues and generating solutions to social problems. However, application of learned social behaviors was observed only when students were first given a verbal reminder. Appendixes include a letter to parents and samples of students' drawings. (Contains 23 references.) (DB)

Geographic Source: U.S.: Florida

Journal Announcement: RIEAUG94

A practicum was designed to intervene and assist borderline elementary school RSP (Resource Specialist Program) students in special education classes and/or through extra assistance within the regular classroom. Borderline RSP students who had been referred to the Student Study :am (SST) for below-grade-level scores and classroom functioning in reading and related subject areas were placed in the RSP pull-cut program. The 11 students worked in an elementary school RSP classroom 3 days a week for 3 months to improve their phonetic skills and other areas of language arts. One day for a week for 3 months, the resource specialist and her aide presented (cont. next page)

enrichment lessons coupled with cooperative learning activities to school-based RSP students and regular classroom students. Practicum results were positive. Students' attitudes about reading, school, and related subjects after the intervention were generally positive. Most of these students were able to receive a passing score by decoding words. The combination of RSP services to remediate decoding skills and other weak areas in language arts, as well as the cooperative learning experiences in the regular classroom, helped to improve the school-based borderline RSP students' attitudes about school and reading. Findings provide support for the use of school-based provision for borderline RSP students' early enrollment in the program. Seven tables and one figure are included; special education terms and abbreviations, forms related to the program, a decoding word list work sample, and a questionnaire are attached. Contains 41 references.

Journal Announcement: RIEJUL94
The program discussed in this paper was developed and implemented to improve student self motivation levels for a target group of 115 9th through 12th grade students who had classes with 1 of 4 participating teachers. Student self-motivation improvement activities were employed over a 12-week implementation period. Strategies developed were all based on Total Quality Management (TQM) principles of empowerment that effectively transform the nature of student/teacher interactions so that they become more positive and less punitive and coercive in nature. Levels of success were measured by administering the Arlin-Hullis Attitude Survey, an empirical measure of student motivational levels, to pre- and post-test target populations. In addition, a questionnaire was developed and administered to pre- and post-intervention groups to ascertain differences in the target population's overall commitment to remaining in high school. The results indicated improved levels of student motivation for the target group when comparing their pretest and posttest. Additionally, it was concluded that students participating in this practicum project were more likely to remain in high school as a consequence of the TQM appendices include teacher and student intervention. Appendices include (cont. next page)

areas of onsite hardware and software and computer-aided assessment and intervention. Results of the primary target population indicated that 76.7% improved their reading skills by 10% and 56.8% improved their attitudes toward reading by 15%. The secondary target population met all the objectives. (Seven tables, 53 appendixes including reading assessment and intervention surveys, a software evaluation form, and computer applications tests are included. Contains 26 references.)

Journal Announcement: RIEJUL94

An Indian child welfare agency realized the need for an HIV/AIDS policy when a diabetic child possibly exposed to the HIV virus was placed in one of the agency's licensed foster homes. A focus-group interview process was selected for policy development because this method appeared to parallel the Native American cultural approach toward consensus and decision making. Objectives of the project were: (1) to complete and present an HIV/AIDS policy draft to the board of directors and executive director; and (2) to document a positive change of 20 percent in the aggregate score for AIDS/HIV knowledge and attitudes among focus-group participants. Focus-group participants included agency employees, foster and adoptive parents, and other human-services representatives working with agency clients. All participants were either of Native American descent or working within the Native American community. Prior to the focus-group meetings, participants completed an HIV/AIDS knowledge and attitude questionnaire and received an information packet. After results of the focus-group meetings were compiled, comparative analysis of group recommendations and other available HIV/AIDS policies revealed that focus-group recommendations were similar to an existing policy that could be modified for the agency's purposes. Post-questionnaire results showed that the objective of a 20 percent improvement in scores was not attained. Appendices include the HIV/AIDS questionnaire, survey results, and other materials cited in the practicum report. (KS)

This report describes a program designed to promote the use of recorded observations in Child Development Associate (CDA) advisors' assessments of interns in early childhood education at a southwestern community college. Sixty-one advisors participated in the program, which consisted of a series of five staff development meetings, formulation of a new lesson plan to be included in pre-service orientation, and revision of a segment of the advisor handbook. Surveys of advisors' experience with competency-based assessment, review of advisors' reports, and an on-going Context Input Process (CIP) evaluation were used in formulating the training program. Results of the program indicated that the advisors increased their use of competency-based recorded observation in meetings with interns and participated enthusiastically in the staff development meetings, and that the design of the meetings successfully promoted reflective discussion among participants. The program also prompted discussion among participants over whether the purpose of recorded observations was to provide encouragement or assess competence. Six appendixes contain the CDA advisor survey instrument as well as samples of program materials. Contains 31 references. (ME)

Journal Announcement: RIEJUL94

This practicum was designed to meet the needs of elementary school students making the transition to middle school. Incoming grade 6 students from five K-5 feeder schools were receiving insufficient articulation from the new middle school to permit them to make a smooth transition. An intervention program was developed and instituted which included middle school visitation days, a student handbook, parent orientation evenings, an open house, student-produced media presentations, pen-pal letters, and parent information booklets. Pre- and post-test surveys of new grade 6 students found that student attitudes were more positive about the middle school experience after participating in the program than prior to it. It was also found that the number of student schedule change requests declined. Five appendixes contains copies of pre- and postintervention guidance counselor and student surveys and recommendations from "Turning Points: Preparing American Youth for the 21st Century." (MDM)

EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL94

This report describes an in-service education program offered to teachers at a rural northeastern Head Start program to help them assess children's overall development by looking at their level of language development. The program focused on the case conference, a forum in which coordinators, teachers, home visitors, and sometimes parents meet to gather information used by teachers in planning teaching strategies. A deficiency in the teachers' ability to refer to language development in assessing a child's developmental stage was identified. To address this problem, workshops were developed in which a certified speech pathologist presented information to teachers about children's language acquisition and development, and also held informal discussions with the teachers. As a result, the six teachers participating in the program began to refer to children's language as an indicator of development stage during case conference meetings. Of the 52 case conferences reviewed after the workshops, 34 included references to language development. The evaluation of the program indicated that training focused on providing information, when associated with a practical application, (cont. next page)

knowledge of gender equity and to use this knowledge in the classroom. Three workshops were presented to three separate groups of teachers that included experiential exercises on defining gender bias, making changes, and exclusion. Through pre- and post-tests and workshop evaluations, it was found that preschool teachers who participated changed their attitudes and demonstrated heightened awareness of gender-biased behavior in the classroom. Ten appendixes provide copies of teacher and counselor surveys, pre- and post-test questionnaires, workshop agendas and outlines, activity outlines, follow-up workshop outlines, and workshop evaluations. Contains 61 references. (MDM)

 Journal Announcement: RIEJUL94
 This practicum report describes a program intended to increase parent participation by improved information delivery at an elementary school. Background study of the school and community indicated approximately a 25% turnover rate of new families and students. Attendance at parent education workshops and school orientation tours before program implementation was low. A survey indicated that parents' work schedules, lack of time, and lack of child care were the main obstacles to workshop attendance. To make parent participation more convenient, several videos were made with students and teachers at the school, including a school orientation video and a video on how to prepare for a science fair. The school set up a parent education resource lending library from which these and other videos, as well as books and booklets on study skills, school subjects, and school-related social issues, could be checked out. The school's monthly newsletter proved to be an effective forum to announce the new resources to parents. Through an order form provided in the newsletter, parents could check out materials by mail, and have them delivered to their homes. As a result of the program, there were more than 430 requests by parents for videos, books, and booklets; there was a 123% increase over the previous year in the number of parents who indicated that they had participated in a parent education event; and 87% of the parents indicated that the opportunities provided in the program were effective methods for obtaining information from the school. Appendixes include copies of surveys and forms used in the program. (ME)

ED367441 PS021924 Improving Early Childhood Educators' Understanding of the Value of Indoor Play through a Teacher Training Program.

Jacoby, Ruth

1993

BOP; Ed.D. Practicum Report, Nova University.

EDRS Price - MF01/PC04 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJUL94

A practicum project was designed to retrain preschool personnel on the importance of indoor play and on their role during play sessions. Workshops and training sessions were developed to examine the physical environment of the classroom, discuss play theories, and review skills that children can develop during play sessions. Pre- and posttests, along with classroom observations of teachers and children, revealed that most teachers who participated in the intervention changed their views and practices regarding indoor play. Teachers became both more aware of the role of play in helping children develop physical, emotional, cognitive, and social skills, and more involved in the children's play to promote these skills. Rooms were rearranged to allow for freedom of movement in and around newly created theme centers. The children became more focused on their role-playing, more verbal with their peers, and more involved in imaginative situations. (Six appendices provide samples of pre- and posttest surveys and classroom observation forms.) (MDM)

Journal Announcement: RIEJUL94

A project was developed and implemented to increase developmentally appropriate activities for children in 79 Orange County, Florida, public schools participating in the

Extended Day Enrichment Program (EDEP). Personnel from the EDEP were enlisted to produce curriculum kits, resource portfolios, cultural immersion workshops, and music, art, dance, and drama videotapes for the training of EDEP staff. As a result of this intervention program, developmentally appropriate activities were implemented at 64 out of 79 EDEP sites, with a substantial increase in the use of child-selected and child-directed activities. In addition, EDEP staff facilitated child-selected activities, increased social interaction, and became involved in active rather than passive supervision. Twenty appendixes provide copies of various forms and documents used and produced by the EDEP to develop and implement the program. Contains 39 references. (MDM)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL94
To address an unacceptable failure and withdrawal rate in an introductory psychology course at Ulster County Community College (UCCC), in New York, a project was undertaken to develop a Learning Assistance in Psychology course to help students with skills and concepts. First, a literature review indicated the need for remediation highlighted the necessity of institutional commitment to a successful remediation program, and described characteristics of successful remediation programs. Next, a pilot assistance course was developed and reviewed by the UCCC Skills Center and Psychology Department. The resulting one semester-hour course focused on general study skills, specialized vocabulary, style of quizzes and exams, analysis of learning style, and appropriate note-taking techniques, and was offered to eight students in Fall 1993. Five of the eight students achieved a grade of "A" or "A" (cont. next page)

minus," while three withdrew. Informal discussions held with the completing students indicated that more than half believed that participation in the course assisted their understanding of concepts and success. Recommendations from the course validation process included the following: (1) the course should be further analyzed cooperatively among the Skills Center, Psychology Department, and student personnel services; (2) the course should continue to be offered and promoted; and (3) the questionnaire for course participants should be further analyzed and developed. Appendices include the course proposal, a course description and outline, a taxonomy of basic skills, related correspondence, suggested class topics, and the student questionnaire. Contains 26 references. (KP)

Journal Announcement: RIEJUL94

To address a decrease in the number of local high school graduates enrolling in Capital Community-Technical College (CCTC) in Connecticut, a project was undertaken to develop a story board for a video to inform prospective students of the benefits of a college education at CCTC. A literature review was performed to find information about the production of educational media materials, the use of media in promotion and marketing, the needs of college recruitment, and the subject of related video. Internal input was received from CCTC admissions and recruitment officers, financial aid personnel, and the student work coordinator, while external input was obtained from the director of educational television for the community-technical college system in Connecticut and a video production company. In addition, volunteer students were given the opportunity to prepare video materials which could be adapted to the story board for other students. As appropriate items of information were located, sketches were made indicating how they might be presented visually and then placed in order and replaced by finished drawings. The

information was then assembled into a story board for planning a video. Conclusions from the project included that, given the ease of created animated sequences, these were more effective than presenting information through acting, and that student video work provided an added appeal for the target audience. Contains recommendations, 19 references, and the story board. (BCY)

Journal Announcement: RIEJUL94

To determine the effect of collaborative learning methods on the success rate of physics students at Northern Maine Technical College (NMT), a study was undertaken to compare the mean final exam scores of students in a physics course taught by traditional lecture/lab methods to those in a group taught by collaborative techniques. The traditional group consisted of 18 students and utilized lectures, discussion of assigned readings, in-class discussion of related physics problems, and common laboratory assignments. The collaborative group included 12 students and utilized short lectures and collaborative assignments, tests, and laboratory assignments. The mean final score was calculated for each group and a two-tailed t-test was conducted to test against the null hypothesis that there would be no significant difference between the two groups' mean scores. The traditional group earned a mean score of 19.11, while the collaborative group earned a mean of 18.17. No significant difference was found in student success resulting from the difference instructional method. Results indicated, however, that collaborative learning methods were as effective as others. The physics final exam is appended. Contains 14 references. (BCY)

(160)
Geographic Source: U.S.; Maine Journal Announcement: RIEJUL94
Lack of institutional guidelines for the preparation of course study guides at Northern Maine Technical College (NMTC) allowed for wide variation in the quality of the guides produced. To develop a resource manual that would provide guidelines for the development of study guides at NMTC, a study was conducted to determine the elements that should be included in a faculty resource guide. A review of the literature was undertaken and responses to the study proposal by NMTC department chairs and the Academic Vice-President were collected. In addition, all 50 faculty at NMTC were surveyed regarding their current practices in preparing course guides and sample guides were collected from 20 other professionals at other institutions. Based on these activities, a draft resource manual was developed and submitted for review to the campus leadership. The resulting manual was based on the following conclusions: (1) study guides serve the two main functions of direction setting and assisting in study material processing; (2) manuals should provide guidelines for both course syllabi and study guide preparation; (3) the materials and techniques used should meet the unique learning needs of the student audience; and (4) NMTC should establish standards for syllabus and guide preparation. It was also recommended that NMTC faculty be provided with the manual and that inservice training be provided. Letters of support, the faculty survey instrument, and the faculty resource manual are appended. (Author/BCY)

This program was developed and implemented to promote higher-level thinking skills and problem solving skills and to strengthen the understanding of mathematical concepts in second grade students through the use of the Logo programming language. The objectives for this study were that 70 percent of the target students should demonstrate the basic Logo turtle commands: construct geometrical shapes; solve problems through discovery; and write a simple program. The target group of second graders participated in a 12-week period to learn Logo through pre-lab activities; hands-on experience in the computer lab; and follow-up activities. All the program objectives were met with the target group improving dramatically in the specific areas. Included in the appendices are the curriculum essentials framework; the pre-study survey and questionnaire; and the phase exams for each step of the program. (Contains 11 references.) (Author/JLB)

(cont. next page)

(160) Geographic Source: U.S.; Missouri
Journal Announcement: RIEJUL94

The purpose of this study was to choose an appropriate network provider for educational consultants and to develop and implement the network at Eurasia Educational Services (EES) using electronic mail (e-mail). The following eight steps were undertaken: 1) literature review, scanning, and selecting of provider criteria, decision-making, participant assessment, a workshop, mentoring, evaluation, and intra-organizational LISTSERV. The provider deemed AT&T EasyLink services most appropriate. The workshop, orientation materials, and mentoring process resulted in the initiation of a global network for EES using e-mail. Once a provider was determined, implementation among new users appeared possible with a single-event workshop, detailed orientation materials, and a mentoring arrangement. E-mail had a significant impact upon an international educational consulting agency with the most definitive difference being financial. The recommendations included publishing the summary tables of possible network providers, informing the parent organization of the impact of e-mail networking, and using workshop/mentoring (both for EES and client institutions in Eurasia) to initiate other technological tools. Questionnaires and a compendium of electronic resources are appended. (contains 86 references.) (TMK)

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL94
This practicum developed a program to improve the

mainstreaming of secondary level students with learning disabilities through provision of: (1) inservice training workshops on the topic of collaborative consultation for regular and exceptional (special) educators, and (2) study skills seminars for the students. In addition to the inservice workshops and student seminars, the practicum involved development of a packet of training information for inservice participants, administration of seminar surveys, development their rights, responsibilities, and opportunities under the Americans with Disabilities Act (ADA). Teachers participated in two national training conferences, taught an ADA curriculum

(160) specifically written for students with disabilities, and developed future classroom plans. Implementation of the practicum involved conducting the training, writing an implementation guide for the training model, writing the ADA curriculum, conducting site visits, developing the ADA Clearinghouse and Teacher Resource Center, compiling an ADA resource packet, and assisting teachers with overall guidance. Analysis of program evaluation data revealed that teachers increased their ADA knowledge as a result of the training model. A comparison of students' pretest and posttest scores showed increased knowledge about the law and the ADA after students (n=53) participated in the law-related instructional program. An appendix contains a 90-page training model implementation guide, with information and resource documents on planning, training components, teacher training, student instruction, and program evaluation. The implementation guide provides a conference checklist, student portfolio questionnaire, teacher questionnaire, student portfolio criteria, and many other resource materials. (Contains 34 references.) (JDD)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJUL94

This practicum developed a self-recording procedure as a strategy for increasing on-task behavior, academic achievement, and self-esteem of 12 students (grades 6 to 8) with emotional disabilities in a self-contained class over a 12-week period. Students were taught to self-record at gradually decreasing frequencies as well to use their judgment in selecting target behaviors and frequency of self-recording. Evaluation indicated a decrease of at least one level of significance on the Burks' Behavior Rating Scale in the areas of poor attention, poor self-esteem, and poor academics. Appendices include sample self-recording checklists, the visual prompts used, letters to parents, the feedback survey of faculty and students, detailed instructions for the self-recording procedure, and a sample progress report. (Contains 24 references.) (DB)

Journal Announcement: RIEJUL94
 In this practicum, 10 children (ages 6 and 7) with hearing impairments or language delays participated in a 12-week program designed to involve students in the total process of goal setting and achievement, including deciding on necessary materials, designing and following a plan to reach the goal, and producing a product. Parents became involved to observe and to carry the learning over into the home environment. Strategies included making pictorial flow chart plans and following them, conducting hands-on activities, and having students view videotapes of themselves at work. The results of pretesting and posttesting indicated that all 10 students made improvements in their ability to think of materials needed for age-appropriate activities. It was concluded that the strategies increased the critical thinking skills of the students. Appendices contain teacher-made test items (including a checklist for pretesting and posttesting and a performance test), a parent questionnaire, and a letter to parents. (Contains 32 references.)  Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.: Arizona
 Journal Announcement: RIEJUL94

This practicum was designed to increase the accuracy of reading decoding skills exhibited by five elementary and intermediate level hearing-impaired students in a mainstream setting. Subjects were fitted with appropriate amplification to optimize their residual hearing but were performing below their grade-level placement in the areas of word attack and word identification, and made numerous reading errors during oral reading of curriculum materials. The outcome objectives aimed to improve the students' phonetic skills for sound/letter units, single words, and connected reading material. The strategy, which was implemented for a 12-week period in the students' special education class, incorporated the use of 70 sound/letter unit flashcards, a comprehensive word list, and the students' classroom reading text. Analysis of data revealed that all five students increased their

accuracy for identifying sound/letter units and transferred this learning to single words and connected text. Results are reported using a case study format. (Contains 19 references.) (Author/JDD)

 62p.; M.S. Practicum, Nova University.
 EDRS Price - MF01/PC03 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.: Florida
 Journal Announcement: RIEJUL94

A practicum was developed to address deficiencies in students' writing skills. The program goals were to assess the students' abilities to use prewriting strategies, to use supportive elements in writing, and to evaluate students' progress using pre- and post-attitude surveys and writing samples. The target group was 20 eighth-grade journalism students with mixed socio-economic backgrounds. During the 12-week implementation period, journalistic skills geared towards producing an issue of the school newspaper were the focal point of the students' writing efforts. Students worked individually and in small groups to complete activities which focused on writing skills at the prewriting stage. Evaluation of the effectiveness of the program included analyses of data, a comparison of the writing samples using the rubric designed by the Florida Writing Assessment program, and attitudinal surveys completed by the students. Results indicated improvements in writing skills achievement and attitudes. Three tables of data are included: the Florida Writing Assessment rubric, survey instruments, pre- and posttests, and an editorial chart are attached. Contains 17 references. (Author/RS)

A Program To Increase Black Student Participation in Extracurricular Activities in Grades 8-12 through Teacher, Parent, and Community Involvement.
Bowers, Betty J.
9 Feb 1993

110p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC05 Plus Postage.
Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEJUN94

Target Audience: Practitioners

This paper describes a practicum that aimed to increase black students' participation in extracurricular activities and school clubs. The lack of participation resulted in black students' feelings of alienation and negative attitudes toward the school. The program's goals were: (1) to increase the number of black students participating in extracurricular activities and school clubs; (2) to make students aware of the existing clubs; and (3) to improve black students' self-esteem. To attain the goals, the program used club orientation sessions, guest speakers, and a workshop that focused on building positive self-esteem, parent and community involvement, and conflict resolution strategies. The data indicated that for the 30 students as a group, participation in extracurricular activities and school clubs increased by 100 percent. All student participants became knowledgeable about the existing school clubs, and there was a 100 percent increase in self-esteem. The results confirm that a club orientation program, combined with parent, teacher, and community involvement, can benefit all students, not just black students. Appendices, comprising 35 percent of the paper, provide various study documents such as student surveys and assessment instruments. (Contains 21 references.) (Author/GLR)

Integrating Thinking Skills into the Third Grade Social Studies Curriculum.
Westwood, Geraldine E.
1993

86p.; Ed.D. Practicum, Nova University.

EDRS Price - MF01/PC04 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEJUN94

This practicum was designed to help third grade students develop critical thinking skills of application, analysis, and synthesis in social studies activities. Teachers were unhappy with the teaching of social studies as it existed. Among the contributing causes were the lack of a critical thinking program, an over-dependence on commercially prepared worksheets, and the lack of student opportunities to explore their environment. Specific strategies were developed that addressed the integrating of thinking skills into the third grade social studies curriculum. The solution was to stress thinking skills through the teaching of three to five thinking skill strategies, problem solving techniques, the use of cooperative learning, wait time, and high level questioning techniques. Teachers also wrote and published six social studies units that were shared with other teachers. Although not all objectives were met, significant growth in thinking skills did occur. Most children showed improvement in application, synthesis, and analysis skills. Creative thinking was fostered by participation in an invention fair. Teacher in-service training sessions were another component of this practicum that was well received. (Author/SG)

biographies. Research based cooperative learning strategies were combined with multicultural instruction. The students were grouped in a heterogeneous, multiculturally composed, cooperative learning model to facilitate the transformation. This project included a detailed fourth grade curriculum outline for cooperative group research, writing, and art projects relating to black and Hispanic cultures. During the project, students developed an appreciation for the power of positive interdependence. Levels of success were measured by pre and post tests: (1) Cultural Awareness Assessment (CAA); (2) modified Racial Tension Scale (RTS); and (3) a Cultural Interaction Sociogram (CIS). Comparisons of the pre and post tests from the three instruments showed positive results. The CAA showed 50 percent to 70 percent increase in cultural literacy. The RTS exceeded the goal of 25 percent decrease in racial tension. The CIS demonstrated more than a 10 percent decrease in negative interaction in the cooperative groups. Appendices include pre and post CAA and RTS, CIS, CCA, and RTS test data comparative results, a parent letter, an inventions game, classroom rules, and happiness helpers doll patterns. (Author/DK)

Journal Announcement: RIEJUN94
This practicum used parent partnerships to increase parent involvement, student attendance, and appropriate school behavior at an alternative middle school for 100 at-risk students located in an impoverished rural area. The goals of the project were to: (1) increase parent involvement in the day-to-day activities of the school; (2) provide parenting classes at the school; (3) decrease discipline problems and office referrals of the students; and (4) increase student attendance. At enrollment, parents signed an agreement to volunteer their time and talents to the school. Documentation of parent visits through sign-in sheets showed that parent involvement increased from 285 visits to 472 during the

practicum implementation period. Attendance records from parenting classes revealed an average of 59 percent of parents attended the sessions. The number of discipline referrals for a 6-month period decreased from 208 the previous year to 106, and suspensions decreased from 82 to 59. There was a 62 percent decrease in absences during the practicum implementation. Additional components of the practicum included a parent support group, a student support group, a peer leader training program, and a designated parent room in the school. Twenty-one appendices contain parent materials, evaluation forms, and supporting documents. (KS)

A program was developed at a local college to provide directors of child care centers, Head Start programs, nursery schools, and school-based early childhood programs with formal training in administration, supervision, and program development to help them better manage their programs. The program was the result of a collaborative effort by directors, college faculty and administrators, and other early childhood professionals in the community, assisted by corporate funding. After the program was in place, a survey of directors indicated that many who had previously felt no such training was available felt the program could provide them with effective formal training in areas of concern to them. Twenty-eight of the 260 directors surveyed decided to participate in the training program. A copy of the survey is appended. Contains 30 references. (MDM)

A practicum project was designed to improve communications, exchange of ideas, and interpersonal relationships among 37 teachers and school staff members in a rural elementary school in an economically depressed area. Monthly "spotlight" gatherings were held, featuring ethnic foods, experiential activities, demonstrations, and discussions of classroom operations, strategies, and procedures. Follow-up projects and teacher-staff team activities also were utilized. Pre- and post intervention surveys indicated that the vast majority of teachers and staff members felt that the project had improved communication, sharing, and teacher-staff relations at the school. Twenty-four appendixes provide copies of various forms, documents, questionnaires, and photographs used and produced by teacher-staff relations program. Contains 38 references. (NDM)

Journal Announcement: RIEJUN94

A practicum project designed to alleviate behavior and discipline problems at a Florida elementary school through the use of a conflict resolution curriculum that emphasized group interaction is described. The third- and fourth-grade students were asked to work cooperatively on projects that guided them through a series of strategies that taught them how to develop respect for themselves and others. Observations were made each month during the school year to ascertain if children were responding to the intervention. Pre- and posttest observations and surveys found that the students learned to communicate effectively with one another and respect themselves and others while learning to accept the unique qualities inherent in all individuals. (Six appendixes provide copies of parent letters, attitude surveys, monthly and final observation report forms, posttest surveys, and references for classroom intervention techniques.) (MDM)

(160)
Geographic Source: U.S.: Florida
Journal Announcement: RIEJUN94
A practicum was designed to address the discrepancies in educational and behavioral expectations and priorities noted on parent and staff surveys at a rural elementary school. The survey of parents (n=261) indicated parents' need and desire for education and training in helping their children at home. The goal of the project was to implement an outreach program to help these parents become more effectively involved in the education of their children. A priority of the project was to change parental perceptions: parents must abandon the idea that the school, teachers, and other experts are responsible for the education of their children and embrace the idea that parents themselves are the first and most important teachers
(cont. next page)

of their children. Through a series of evening educational opportunities, training sessions, service fairs, and the establishment of a parent resource center, parental attitudes began to change, as indicated by their increased willingness to attend parenting events at the school. (Seven appendices contain copies of parent and staff survey questionnaires, summaries of survey responses, evaluation of parent activities, and a parent resource center "wish list" of desired books and resources.) (MDM)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUN94

This practicum was designed to involve senior citizen volunteers in the schools on a regular basis. Implemented in a suburban public school setting, the project involved: (1) the dissemination of information about senior citizen involvement to school district staff; (2) the development of a partnership between a regional senior volunteer program and the school district; (3) the matching of school district needs with senior citizen volunteer interests; and (4) the development of a Living History project, in which students interviewed participating senior citizens about their experiences during World War II. At the end of the project the middle school held a Living History Day, during which students presented historical papers based upon their interviews and library research to fellow students and the senior citizens. Although the original goal of the project, to have senior citizens participate regularly in the educational process, was not met because many had initially refused to participate due to past negative experiences with senior citizen-student undertakings, the successful Living History Day can be seen as a first phase of a senior citizen volunteer plan. Follow-up surveys of the senior citizens involved showed that they thought the project worthwhile. Eleven appendices provide copies of various forms, letters, and survey questionnaires used in the practicum. (MDM)

Journal Announcement: RIEJUN94

A practicum was designed to utilize various techniques to: (1) improve the involvement of parents and volunteers in the education of fourth grade students; (2) help the students develop a more positive attitude toward self, school, home, and community; and (3) increase students' school attendance rate and participation in school and community activities. The majority of the students came from disadvantaged backgrounds or single-parent households or both, and had difficulty succeeding in school. During the academic year, mentor programs, parent workshops, a monthly newsletter, a student-of-the-week program, field trips, tutoring programs, and student performances were developed to accomplish the aforementioned goals. Pre- and post-intervention assessments found that student attendance improved, children developed more positive attitudes toward school, and parent participation increased. (Six appendixes contain copies of letters and forms used in the practicum, as well as survey questionnaires distributed to teachers) (MDM)

 This practicum addressed the self-concept and self-esteem problems of 10 upper elementary grade students with learning disabilities through development, implementation, and evaluation of a group counseling program. The program involved educating students about their learning disabilities as well as using counseling strategies which stressed student strengths and challenged their erroneous belief systems. The students were also given opportunities for reverse-role tutoring (in which students tutored first graders in reading).

Role models were developed through the influence of an adult model with learning disabilities and a literary project on famous historical figures with learning disabilities. Meetings were held with teachers, parents, and the children's regular education peers to provide information on learning disabilities and enhance the students' acceptance. Results from both standardized self-report measures and informal questionnaires showed that all 10 students demonstrated significant improvements between pretest and posttest in self concept and self-esteem. Reduced levels of anxiety and improved behaviors were also observed. Letters, questionnaires, and forms used during the practicum are appended. (Contains 39 references.)

Examination of Motivating Factors Attracting Licensed Practical Nurses into a Registered Nursing Program.

Target Audience: Practitioners
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: Canada; Manitoba
Journal Announcement: RIEJUN94

A study identified characteristics and motivating factors that influenced licensed practical nurses (LPNs) to participate in a registered nursing (RN) upgrading program at a hospital in western Canada. A literature review considered the concepts of motivation, participation, adult learning, and life transitions and explored a variety of models and theories. A modified Education Participation Scale, incorporated into a participation survey, was used for data collection. The questionnaire was mailed to all LPNs enrolled in the upgrading program. The respondents were asked to respond to each item in relation to the extent it had influenced his or her decision to participate in the program. Descriptive statistics used to analyze the data included frequency distribution, measurement of central tendency (mean scores), and measurement of variability (standard deviation). Of 106 surveys distributed, 64 were returned. The results indicated that LPNs pursuing an RN upgrading program were primarily motivated by a desire for professional advancement, professional knowledge, and acquisition of credentials. When respondents were asked to identify other factors that motivated them to pursue the upgrading program, the majority responded that compliance with authority was the main reason. The demographic information showed that this population consisted of nontraditional, older students with many years of nursing experience. The survey instrument is appended. Contains 26 references.

Journal Announcement: RIEMAY94
This practicum was designed to utilize a shared decision making (SDM) committee model as a mechanism through which a long-range, comprehensive computer technology plan would be developed for a Jackman (Maine) school system. On-site research coupled with an extensive review of current literature produced a finding that long-range technology education planning had not previously materialized in the school due to the ad hoc fashion in which computer technology had pervaded the curriculum. A committee was established utilizing a shared decision making model. All parties with a vested interest were represented in the process. The sole charge to the committee was the development of a comprehensive computer technology plan. The results of the practicum were positive. A comprehensive computer technology plan, which will guide computer budget preparation and curriculum development, was developed and subsequently accepted. Copies of surveys used in the needs assessment, a project timeline, and the completed comprehensive computer technology plan are appended. (Contains 67 references.) (Author/KRN)

Journal Announcement: RIEMAY94

This practicum was designed to increase middle school students' use of their school's existing technology. The project was implemented in four phases. First, teachers participated in 10 in-service training workshops on the use of technology and collaborative learning as an instructional

strategy. During the second and third phases & support/mentor system to help teachers use the technology at; the school was offered. A weekly series of technology support meetings was held for teachers. Incorporating training with discussion and shared practices. Twenty-five student mentors/aides were trained to assist teachers and students as they used technology in the classroom or the computer lab. Finally, parent workshops were held to share ideas on the use of home technology for educational purposes. Most of the practicum objectives were met or exceeded, including increased student use of technology, increased teacher implementation of technology and collaborative learning, and increased parental understanding of the use of technology. The success of the practicum suggests that the design of the four-phase program is an effective strategy to increase the use of technology in a school. Recommendations and a detailed implementation plan are included. (Contains 48 references.) (Author/KRN)

Helping Elementary English as a Second Language Students To Become Independent Learners by Improving Their Reading Strategies.

Kaminsky, Debra E.

1993 48p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC02 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAY94
This practicum was designed to address the need for the intermediate and upper grade level English as a Second Language (ESL) students to become independent learners in the literacy process. The subjects, 13 boys and 3 girls from Pakistan, Philippines, Jordan, Israel, Korea, Turkey, and Thailand were dependent on the teacher when they had difficulty with words and had poor self-confidence in their learning strategies. The author met with the subjects' parents to discuss ways to encourage the children to become independent learners in the literacy process. Students wrote reactions in literature logs to books they read and used a self-monitoring approach to reading and thinking. A group list (cont. next page)

of new vocabulary words from a basal reading selection was designed by the students to define meaning using the context of the material. By keeping a portfolio, students were involved in the assessment of their own writing. Results of the study showed that students learned to use the context of the reading material, dictionary, or encyclopedias to determine the correct spelling or meaning of a word. They became familiar with many books written in English and had more self-confidence in their learning strategies in the literacy process. More time was spent at home studying than on watching television. A reading strategies questionnaire, use of time questionnaire, and title recognition test are appended. (Contains 28 references.) (UP)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEMAY94

This practicum involved the development of a pre-referral intervention approach to increase support for elementary and middle school students with learning problems through the use of Pupil Assistance Committees which designed and monitored strategies for educating students with learning problems in the regular classroom. Pupil Assistance Committees usually consisted of the principal, the learning consultant, the reading specialist, an experienced teacher from regular education, and the referring teacher. An intervention checklist was developed to encourage teachers to try various intervention strategies before referring the student for special education services. Especially effective pre-intervention strategies were parent involvement and peer tutoring. Substantial decreases in the number of referrals were achieved and almost all students referred were found eligible for special services. Increased collaboration between special and regular educators was also achieved. Extensive appendices include additional information on student referrals and classification, interventions used prior to referral, the Pupil Assistance committee referral path, parent notification, pupil assistance procedures, and teacher attitudes. Also

attached are various forms used in the program and the intervention checklist. (Contains 29 references.) (DB)

This report describes the implementation of a data-based program to reduce unacceptable student behaviors and decrease the number of administrative interventions with 21 students with severe emotional disturbances. A computerized database was developed to track classroom and transportation discipline infractions. Students met monthly to review their individualized, cumulative, computer printout of their discipline record, classroom target behaviors, and general conduct. In addition, students were videotaped monthly during individual and classroom counseling sessions. Parents met tri-monthly for an individualized conference to view their child's video tape and discipline report. A series of parenting workshops was offered to increase basic knowledge of parenting skills. Staff were provided with inservice training in techniques for effective aggression management. Referrals for behavior infractions to the administration were reduced by 75 percent during the practicum period. Parents and educators were enthusiastic about the training workshops. Extensive appendices include a behavior management plan, database entry forms, videotaping record form, parent permission form, staff questionnaires, and parent questionnaires. (Contains 36 references.) (DB)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAY94
This practicum was designed to develop transition skills of students with learning disabilities into the community college through a support services program designed to enhance academic and social competencies. A series of instructional sessions (24 hourly sessions) were held separately with 10 first semester college students and 10 graduating high school seniors with learning disabilities. Instruction was given in: (1) understanding one's disability; finding strategies necessary to compensate for it; (2) understanding learning style, promoting self-advocacy, enhancing study skills; and (3) dealing with frustration and low self-esteem, examining alternatives to college. The practicum also developed and implemented a model transition program for college use and developed and implemented a set of easily administered and scored evaluative instruments to identify entering LD students. Evaluation indicated the program exceeded expectations by increasing both academic and social competencies for participants. Appendices provide additional practicum details and include the student questionnaire, a learning style profile, a study habits survey, a social competency checklist, a learning disability questionnaire, a self-advocacy questionnaire, an academic stress survey, a self-esteem inventory, an alternative choices questionnaire, and a student profile form. (Contains 36 references.) (DB)

Language: English
Document Type: THESIS (042)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAY94
This paper reports a practicum which attempted to improve delivery of speech language services to children with speech language handicaps in two elementary schools without pulling students out of regular classes. The speech language pathologist (SLP) implemented a collaborative approach with regular teachers providing support in the areas of identifying the student's current level of functioning and planning for intervention specific to the student's area of deficit. Collaboration was also implemented in the review and evaluation of language requirements and materials used in the classroom and the development of techniques to meet the needs of children with diverse academic and cultural backgrounds. Additionally the SLP provided parents with evidence for the effectiveness of classroom based interventions. A team teaching and peer coaching delivery model was used at both school locations. The practicum resulted in services being provided to children previously unserved, to establishing collaborative relationships with some teachers in each school, and to formulating plans to expand the collaborative approach in the following year. Appendices include diagrams illustrating the previous and experimental delivery models, a SLP mission statement, and the 4-year plan for model implementation. (Contains 43 references.) (DB)

Disabled Students through Implementation of a Resource/Consultative Service Delivery Model.

Chioldo, Carolyn B.

8 Jul 1993

84p.; Ed.D. Practicum Report, Nova University.

Language: English

EDRS Price - MF01/PC04 Plus Postage.

Geographic Source: U.S.; Florida

Journal Announcement: RIEMAY94

This practicum implemented a resource/consultative model in place of a pullout model that was failing to meet the needs of second grade students with specific learning disabilities (SLD), at-risk students, and regular and special educators. The practicum involved conducting team meetings, increasing faculty awareness, and implementing curriculum-based assessment. Informal consultation services were provided and workshops were held to explain and provide instructional assistance in implementing the model. A team was developed to establish schedules for in-class remediation, direct service, and consultation. In-class remediation progressed from teacher-directed activities, through SLD teacher-directed activities, to shared planning on unit presentations. Students within the targeted classroom showed improvements in academic achievement, but objectives identifying specific academic outcomes were not entirely satisfied. However, teacher evaluation forms indicated positive acceptance of the model and faculty voted to incorporate the model into the school's Improvement Plan for the coming year. Appendices include the program evaluation form, the resource/consultation log, and the student progress form. Tables provide details of the academic achievement and curriculum mastery test results. (Contains 65 references.) (Author/DB)

 This practicum was designed to train eight adolescents with specific learning disabilities (SLD) about their legal rights and responsibilities, through a scenario-based program presented in the classroom as part of a transition program. The practicum involved the development of 22 scenarios with the scenarios ware: shoplifting, fatherhood (rights and responsibilities), routine traffic stop, disorderly conduct, assault and battery, parents' authority and responsibilities, fireworks, school attendance, school's authority, handicapped rights, labor laws, driver's licenses, rights and responsibilities, use of telephone, trespassing, age of majority, motorcycle usage, and rights in court. Results indicated that students increased their knowledge of their legal rights and responsibilities and also gained skill in making thoughtful decisions in this area. (Contains 13 references.) Developing a Social Skills Training Program To Assist Special Education Middle School Students Entering the Mainstream.

Shapiro, Joel F.

20 Aug 1993
76p.; Ed.D. Practicum Report, Nova University.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

This practicum employed a systematic series of activities to assist special education middle school students ($n=16$) in making successful transitions from special classes into regular classes. Students were identified as either gifted-handicapped or communication disordered. Weekly class meetings were held in which general social skills issues were discussed, role playing techniques were used, and specific social skills were taught. Parents were encouraged to meet, and information about social skills development was provided to them. Results included: (1) students developed new, age-appropriate social skills; (2) students made new friends both in special and mainstream classes; (3) school staff increased their contacts with each other; (4) teachers and parents reported improved student behavior; (5) suspensions for inappropriate social behaviors in school dropped substantially; and (6) students' self esteem grew. Five appendices provide additional detail, including a chart for determining changes in students' social skills, examples of social skills development materials used, examples of social skills rating scales and skill development materials for parents, and charts for determining changes in students' friendships. (Contains 35 references.) (Author/DB)

Geographic Source: U.S.; New Jersey

Journal Announcement: RIEMAY94

This practicum developed a comprehensive Individual Transition Plan (ITP) model for five high school students with learning disabilities, in which social skills, advocacy, communication skills, career evaluation, and postsecondary concerns were explored through the collaborative efforts of school personnel, community members, outside agencies, the student, and the parents. The practicum involved administration of questionnaires, assisting agencies in career evaluations, executing group and individual sessions with students to enhance interpersonal skills, arranging mentoring relationships, organizing a Career/College Night, and compiling information into a computerized ITP. It was felt that the practicum information was utilized to provide a clear vision of the systematic steps that the learning disabled youngster must take to attain future goals. Appendices contain various questionnaires, skills lists, and ITP forms. (Contains 31 references.) (JDD)

This practicum was designed to increase the ability of human services professionals to provide knowledgeable and effective direction and support for adoptive parents of children with attention deficit-hyperactivity disorder. A 1-day training program and materials were developed to reach the goal, and two social workers were trained to present the program to four groups of human services professionals, which included social workers, adoption workers, and related professionals and paraprofessionals. Content of the program consisted of motivational activities, description of the disorder, explanation of diagnosis and treatment, and consideration of case management. A reference handbook was produced for each participant, as well as an informative brochure for use with participants' clients. Results of the practicum indicated significant increases in specifically identified areas of knowledge. Appendices provide a post-test and other materials used in implementing the practicum. (Contains approximately 80 references.) (JDD)

Document Type: PRACTICUM PAPER (043)
(160)

Geographic Source: Canada: British Columbia

Journal Announcement: RIEMAY94
The goal of this practicum was to have building-based special education personnel support classroom teachers so that mildly disabled elementary students in an inner city school could be included in the classroom successfully. Through inservice education sessions, the staff were provided with current information on facilitating the inclusion of mildly disabled students, and then staff collaborated to develop solution strategies appropriate to their setting. A collaborative school-wide restructuring of support services was implemented, altering special education support from three separate, vertical programs to three horizontal support teams responsive to the needs of the classroom teachers in each team. Special and general educators worked together to address students' academic needs. At the completion of implementation, all target students were receiving individual or small group instruction for a minimum of 90 minutes daily. Nine of 10 teachers were "very satisfied" or "satisfied" with the new service delivery model and wished to continue with the model. Appendices provide copies of questionnaires and administrative materials. (Contains approximately 70 references.) (JDD)

Journal Announcement: RIEMAY94

This practicum was designed and implemented to reduce the underrepresentation of minority students in gifted programs, and to help minority students improve their academic achievement in Westmoreland County, Virginia. The practicum involved examining the gifted student nomination/identification process to see if instruments or procedures were culturally biased. Alternatives were implemented, the nomination/identification form was adapted to include an expanded case study approach, and gifted staff development focused on cultural diversity was conducted. Staff development focused on instructional systems that are recommended specifically when working with black students. Results of the practicum were positive-minority students receiving gifted services increased, a significant number of minority students improved their academic achievement, and teachers felt that staff development assisted them with classroom climate and instructional strategies. Document Type: DISSERTATION (040)

Geographic Source: U.S.: Florida

Journal Announcement: RIEMAY94

This practicum paper describes a method for developing and implementing a student-discipline plan in a small, rural high (cont. next page)

school in north central Florida. The combined middle- and high school is the poorest in the county. When corporal punishment was banned in the county and no alternatives were implemented, the number of suspensions increased. An analysis of discipline referrals and suspensions for 1989-1990 and 1990-91 revealed a large number of referrals for a small school and an increase in the number of out-of-school suspensions. A program was then implemented to increase parent, student, community, teacher, and administrator involvement in the formulation of discipline guidelines. Second, teacher guidelines for handling discipline problems were developed. The practicum intervention resulted in increased teacher involvement in the discipline process; greater communication between student and teacher; teacher and parent; and teacher and dean; increased parent participation; a reduction in the number of discipline referrals; and the introduction of an in-school detention program, which significantly decreased the number of out-of-school suspensions. Nine tables and three figures are included. Appendices contain the pre- and post-questionnaires and sample forms. (LM)

A Multiculturally-Responsive Tenth Grade English Curriculum Nurtures an Appreciation for Individual Differences by Immersing Students in the Lives of Others.
Alexander, Jayne
1993
71p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE
(160)

Geographic Source: U.S.: Florida
Journal Announcement: RIEMAY94
The goal of a practicum was that high school students in non-academic 10th grade English classes would develop an understanding of and appreciation for cultural differences. The English teacher challenged herself, her peers, her students, and the general school population (a regional high school in a growing community in the northeastern United States) to become more knowledgeable and appreciative of many cultures by expanding her own knowledge of ethnic groups; creating a faculty reading club; developing a curriculum that responsibly presented ethnic groups in a relevant format; designing activities that provided opportunities for interaction with other cultural groups and for action on

behalf of others; and providing programs for the larger student population. Expected outcomes were reached. Non-academic tenth-grade students did develop an understanding and appreciation for cultural differences. By participating in both school and class programs, students became more involved with and knowledgeable of the values and experiences of those whose roots were different from their own. In addition, they demonstrated a willingness and intention to respond to the crises of a culturally diverse group outside of their immediate circle of friends. (Forty-two references, a sample assessment instrument for cultural awareness, the volunteerism interview questions, and book selection criteria are attached.) (Author/RS)

This practicum was designed to improve child protective services in a western state to sexually reactive children under the age of 10 by targeting four areas of the service delivery system: screening, assessment, treatment, and foster care. A panel of agency staff from all service areas researched, designed, proposed, and implemented changes throughout the agency that affect sexually reactive children. Products of this practicum include a Screening Assessment criteria for confirming a young perpetrator, a Treatment Options List, a curriculum outline for training foster parents, and the "Sexually Reactive Children and Child Protection Manual." The Risk Assessment and the criteria for identifying a young perpetrator have been adopted for state-wide use to standardize social casework practices across counties. The agency family therapist is developing a treatment group for low income sexually active children. The manual has been distributed throughout the state. Appendixes include: Preliminary Coursework Survey; standardized screening evaluation; risk assessment evaluation; treatment options (cont. next page)

evaluation; foster parent program evaluation; resource survey; treatment options list and foster parent training outlines.

ED364790 CG025109 Improved School Attitude in Elementary School through Child Centered Hands-On Activities by Building Confidence & Self-Esteem. Gilbertson, Bonnie L.

1993 51p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94

This practicum was designed to assist the 25 students in one fifth-grade classroom where students projected a predominant feeling of not wanting to attend school and where many students, although all average to above average in intelligence, were not attaining consistent scores for achievement in relation to their potential. A 12-week program was developed and implemented for the classroom, consisting of 30-minute sessions. Hands-on activities were used to develop the students' knowledge, understanding and enhancement of their understanding of self and others, recognizing strengths and weaknesses, recognizing improving interests and abilities, communicating more effectively, learning the value of teamwork, and learning how to problem solve. Parents of the students were an integral part of the program, attending two evening sessions with their children. Each parent-child agenda lasted 2 hours and included parenting strategies in communication skills and discipline, plus tips on how to help their child succeed in school. Analysis of the charts and surveys completed showed that not one student's mathematics or reading final scores decreased and nearly one-half of the students increased their academic final scores. On the attendance chart, student attendance improved with only a few exceptions. Students changed their attitudes about school, exhibited a better rapport with peers, and the teachers responded favorably to the program. (Author/NB)

ED364351 PS021930 The Design and Implementation of an Intergenerational Program at a Private Long-Term Healthcare Facility with On-Site Childcare. Rosenberg, Marcia Kasper

1993 66p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94

A practicum project addressed the problem of separation of generations. An intergenerational program was designed to provide elders at a long-term care facility and children at the on-site daycare center with opportunities to interact with one another for the social and emotional betterment of both groups. Participants in the program included 17 children and 30 elderly adults, 12 from the facility's adult daycare program and 18 facility residents. Daily interactions were either spontaneous, scheduled, or planned special events in a variety of settings including an intergenerational room as well as public areas of the nursing home and adult daycare center. Data were gathered from pre- and post-program surveys completed by the children's parents and the elders, and a post-program director's and administrator's survey. As projected at the beginning of the program, results indicated: (1) the program was beneficial to the children and the elders; (2) the children demonstrated a positive attitude toward the elders; (3) the elderly participants enjoyed the children and the intergenerational program; and (4) the program helped create a home-like family atmosphere at the long-term care facility. Contains 56 references and examples of the survey instruments. (TJQ)

ED364350 PS021923 Strengthening Teachers' Contact and Involvement with Parents through a Concentrated Program of Experiences and Activities. Henderson, Rita McTyre
(cont. next page)

1993
51P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94

A practicum was designed to increase parents' participation in the education of their children by involving parents and teachers in a concentrated program of experiences and activities. The setting for the practicum was an elementary school for kindergarten through third grade, where teacher surveys, parent meetings, workshop attendance, and Parent Teacher Association membership lists provided evidence of little or limited parent involvement in the school. The practicum involved: (1) developing a monthly newsletter to strengthen communication between home and school; (2) developing teacher training programs which stressed effective conferencing and communication with parents; (3) publicizing parent meetings, workshops, and special school events on local radio and community newspapers; (4) creating the Parent Hall of Fame to recognize parents who made outstanding contributions to the school; (5) coordinating the work of parent volunteers and providing them with certificates and a special reception from school staff; and (6) providing parents with a friendly environment in which to volunteer their time, talents, and materials. An analysis of survey responses from parents and teachers, membership lists, and parent activity lists indicated that, after the practicum activities and experiences were completed, parent involvement had increased in classroom participation and attendance at parent meetings and workshops. Contains 32 references and the survey instruments. (Author/AC)

ED364211 IRO16387
Development and Implementation of a Program To Increase Electronic Mail between Fifth and Sixth Grade Students, Parents, and Teachers.
Burmeister, Marsha L.
1993
151P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC07 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94

The problem addressed by the practicum was that students, parents, and teachers in the school districts studied did not actively participate in electronic mail opportunities. The goal of the practicum was to increase involvement in electronic mail (e-mail) among fifth and sixth grade students, their teachers, and parents. A telecommunications booklet was developed and distributed to students, parents, and teachers throughout the implementation of the project; and an electronic bulletin board service (BBS) was set up and operated. Introductory workshops were presented to teachers; individual and small group inservice sessions were also presented including interactive online typing sessions. At the end of the implementation period, the BBS had 99 registered users, 64 of whom actively called the system. Of the active callers, 45 were students in fifth or sixth grade, 15 were teachers, and four were parents. A total of 366 e-mail messages were sent with 306 calls logged on the system. Analysis of results indicated that the participants in the project increased in their use of electronic mail. Eleven figures and one table present study findings, and 24 appendices contain forms and instructions used in the study. (Contains 46 references.) (Author/SLD)

Document Type: DISSERTATION (040); PROJECT DESCRIPTION (141)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94
This report describes the process used by the Hammonton (New Jersey) Public School District to develop and implement a plan to integrate computers into the K-12 curriculum. A 5-year plan was developed for the acquisition of hardware and software, a voluntary staff development program was implemented in (cont. next page)

computer applications, integration and multimedia were provided for teachers in the district, and a community public relations program was designed to disseminate information. Five-year plans were unanimously adopted by the Board of Education for implementation during the 1991-92 school year. Several district initiatives that supported the acquisition of hardware and software included the establishment of a school-business partnership and the creation of an education foundation. All of the teachers participating in the staff development program integrated one or more components of computer applications into the classroom environment. Teacher knowledge, perception, and expectations with regard to computer technology and education improved during the implementation process. Finally, efforts to disseminate information to parents and other members of the community also promoted broad, conceptual understandings of the district's initiatives and resulted in improved public attitudes toward computer integration. Surveys on teacher perceptions of computer technology and other data are presented in eight statistical tables and nine figures. (Contains 33 references.) (Author/KRN)

ED364101 FLO21678 Assisting Secondary Limited English Proficient Students through the Implementation of Computer-Assisted Language Learning.
Jacoby, Sherry M.
25 May 1993
53p.; Practicum Report. Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94

A study investigated the utility of computer-assisted English second language instruction for limited-English-proficient (LEP) secondary school students in a system in which there was no regular bilingual or compensatory education offered. As a result of a home language survey and followup oral language proficiency test, three LEP or non-English-speaking students were identified. All needed a medium for communication and self-expression. These students were provided with instruction in the use of a word processing program and encouraged to use the computer independently. It was found that after the 12-week program, students acquired word processing skills and learned to use the computer for

daily written assignments for regular classes. Recommendations for followup include incorporating word processing into the regular classrooms. Perhaps drawing on the LEP students' newly-acquired knowledge, establishing a better procedure for identifying and addressing the needs of LEP students, and providing inservice training for regular classroom teachers in dealing with LEP student needs. A 22-item bibliography is included, and appended materials include the home language survey, a language skills checklist for teachers, and a student survey of computer skills. (MSE)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR94
This study investigated the effectiveness of a variety of teaching techniques, including both standard English-as-a-Second-Language (ESL) methods and the teacher's own strategies, in improving the English language proficiency of 15 Haitian and 5 Hispanic third-graders. The students were administered oral and written pretests and found to be functioning in English at non-independent levels. Instruction combined three distinct approaches (scientific, traditional, and direct) and used short stories, individual and group instruction, peer tutoring, flash cards, posters, textbooks with pictures, tape recordings, television viewing, a field trip, limited reading and writing experiences, and 1 language experience charts. The students were instructed for 2 hours a day for 12 weeks. Posttests indicate that all of the students gained significantly in English language proficiency. Other teachers are encouraged to incorporate such techniques as peer tutoring, language experience charts, television, tape recordings, and field trips in both pull-out programs such as this and other ESL, bilingual, or special education classes. Schools are encouraged to offer generalized workshops for

Journal Announcement: RIEMAR94

Due to changes in agriculture and the resulting decline in numbers of migrant families, many migrant programs must redefine job responsibilities and retrain and reassigned migrant support personnel. This practicum was aimed at retraining migrant educational and health support personnel in the job skills necessary to move into available Chapter 1 Basic home-school liaison positions. A preliminary study documented the school district's decline in number of eligible migrant students and estimated the consequent loss of federal aid. A job skills inventory determined the skills necessary for the home-school liaison position. A review of the literature examined rationales and strategies for midcareer retraining. Displaced personnel attended workshops and skill development sessions, held on the job and after hours. Current migrant funds financed the retraining; migrant and Chapter 1 Basic funds were comingled since the newly trained liaisons would provide services to both migrant and Chapter 1 students and their families. Written procedures were developed for the retraining process. Currently employed Chapter 1 resource teachers were assigned as mentors and peer coaches for the trainees. The newly trained liaisons conducted a self-esteem workshop for migrant and Chapter 1 parents. Positive project evaluations were received from the trainees, their mentors, and parents. This paper contains 40 references, parent questionnaires, participant attitude surveys, and competency checklists completed by mentors. (SV)

 Language: English
 Document Type: PRACTICUM PAPER (Q43)
 Geographic Source: U.S.; California
 Journal Announcement: RIEMAR94

This report describes and evaluates a program to improve the dental health of Hispanic migrant children in a Los Angeles County school district. Difficulties in providing dental health care to this population included the high cost of dental care, limited access to dental services, poor nutrition, and lack of parental involvement. The 3-month program consisted of community awareness activities, dental screening of 134 migrant students, recruitment of 3 local dentists to accept state medical assistance payments, recruitment of parents to participate in dental health education, selection and development of bilingual dental hygiene education materials for elementary, grant students and their parents, and treatment arrangements for students with urgent dental care needs. Program outcomes indicate that 47 children who consistently participated in dental hygiene instruction did not develop additional cavities. Children whose parents were active in the program were consistent in dental hygiene practices and showed improved dental health. Although 15 children with urgent dental care needs received treatment, an additional 48 children still needed dental care at the end of the program. Although the program was successful in meeting most of its objectives, there is a need to increase long-term dental services, including preventive care, to low-income children. Appendices include parent permission form and dental screening form. (LP)

ED363450 PS021929 Using the Head Start On-Site Program Review Instrument (OSPRI) To Train Principals in Developmentally Appropriate Classroom Practices.
Karas, Elizabeth A.

1993 46p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MFO1/PC02 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94
This practicum was designed to help principals who supervise prekindergarten classes become more developmentally appropriate educational program Review practices by using the Head Start On-Site Program Review Instruments (OSPRI). Inservice training was designed and presented in three segments and included an independent follow-up activity which encouraged participants to apply learning. A total of 9 of the 21 school principals who supervise prekindergarten classes were familiarized with research about high-quality early childhood programs, with the local program configuration, with Head Start Education Performance Standards and developmentally appropriate classroom practices, and with the Head Start review instrument, the OSPRI. Qualitative data indicated that those principals who participated in the training showed increased knowledge about developmentally appropriate practices. Five appendices provide copies of the prekindergarten administrator's inservice evaluation form, the objectives and agenda of the three inservice training sessions, and samples of the principals' responses on the inservice evaluation forms. (MDM)

posited that a training intervention focusing on improving the employee support skills of first-level supervisors would reduce staff turnover. Three 3-hour training sessions were held for supervisory personnel. The sessions emphasized role playing, field assignments, peer review, positive reinforcement, and multiple evaluation techniques. Pre- and postevaluations were compared to determine the effect of the training program on supervisors, and the targeted child and youth care staff were surveyed both before and after the intervention to determine their level of job satisfaction. Before the intervention, 52% of staff surveyed said that they received little or no job satisfaction, whereas after the intervention only 20% said they received little or no job satisfaction. Overall job satisfaction rose considerably, and supervisory personnel improved their employee support skills. Nine appendixes provide copies of the following: (1) staff and supervisor survey forms; (2) survey results; (3) training implementation plan; (4) training materials, role playing scenarios, and field assignments; (5) training evaluation forms; and (6) pre- and postintervention results. Contains 57 references. (MDM)

Meeting the Diverse Learning Needs of Early Childhood Education College Students through a Self-Directed Learning Process.
Burgett, Maxine

1993
141P ; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC06 plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Ohio
Journal Announcement: RIEMAR94

In an attempt to better serve the diverse educational needs of both traditional and non-traditional college students, a self-directed learning process plan was implemented in two community college early childhood education classes. The process began with an informal introductory meeting between instructor and students, followed by individual student interviews conducted by the instructor during the following week. Additionally, students completed a questionnaire indicating their educational needs. Next, students established individual objectives for the class, and each student designed a learning contract which was reviewed and approved by the instructor. Once the contract was reviewed and approved by the instructor, students presented their contracts to the class. Both the instructor and the students completed weekly log entries which verified the design, implementation, and assessment steps of the self-directed learning process. (cont. next page)

Early Identification and Interventions for Elementary Students at Risk of Not Succeeding in School.
Youngmann, Janet
2 Apr 1993
109p.; Ed.D. Major Applied Research Project Report. Nova University.
EDRS Price - MF01/PC05 plus Postage.

Language: English
Document Type: DISSERTATION (041); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94
This project described methods of early identification and implementation of various interventions used to increase achievement of students at risk in grades three, four, and five at John D. Floyd Elementary School in Spring Hill, Florida. The 51 children who qualified for and were enrolled in the dropout prevention program had achievement scores below national and state norms. Possible causes of the low achievement scores included poor attendance, retention, inconsistent time on task, inappropriate teaching strategies, large class size, inadequate material, nonsequenced curriculum, and unstructured computer instructional time. Individual education plans were designed for children and

Outcomes included the following: (1) of the 31 students who enrolled, 30 completed their contracts; (2) only 2 of the 31 students stated a preference for traditional learning modes while the self-directed process was preferred by 29; (3) all students reported that the process was useful in meeting their educational needs; and (4) 27 of the 31 students reported that the instructor served effectively as a facilitator. Appendixes contain course syllabi, questionnaires, interview questions, weekly log forms, and model learning contracts for the two courses. (MAB)

ED363371 JC930500 Developing an Efficient and Effective Admission Criteria That Reduce Faculty Time and Complaints To Administer. McKenna, Donna 1993

Geographic Source: U.S.: Florida Journal Announcement: RIEMAR94 A project was undertaken to reduce the amount of time required to screen first year students into an oversubscribed early childhood education program at a multicampus community college in Ontario, Canada, and to reduce faculty complaints concerning the procedure. The original process consisted of applicant questionnaires scored by faculty and lengthy interviews between candidates and faculty members. Following a review of the literature and a survey of faculty, a new procedure was developed which eliminated the interview, screening students instead by the following five criteria: (1) previous academic performance, determined by English grades and averages of all other marks from grade 12 on; (2) a personal statement by applicants describing their life experience, motivation for working with children, personal qualities and attributes, and examples of initiative; (3) a standardized test measuring applicants' reading and writing ability; (4) attendance at a mandatory information meeting to report on a visit to a child care center; and (5) references from two people familiar with the students' work with young children. Implementation of the new system resulted in reduced faculty workloads, with the procedures requiring an average of 17 minutes per student, compared to 60 minutes previously. In

addition, all faculty reported that the system was much improved in terms of time required, although some questioned the effect on the quality of students. Sample forms are appended. (Contains 50 references.) (MAB)

ED363361 JC930484 The Development of a Black Student Recruitment Program at Jackson State Community College. Williams, Fred D. Aug 1993

77P; Ed.D. Practicum, Nova University. EDRS Price - MF01/PC04 Plus Postage. Language: English Document Type: PRACTICUM PAPER (043); TEST. QUESTIONNAIRE (160)

Geographic Source: U.S.: Tennessee Journal Announcement: RIEMAR94 Jackson State Community College (JSCC) is a state supported institution in rural West Tennessee under federal mandate to increase the proportion of black enrollments to reflect the proportion of blacks in the college's service area. In response to this mandate and to declining enrollments in general, a project was undertaken to develop a recruitment plan that would increase the number and percentage of black students in the student body. First, literature reviews were conducted on barriers faced by blacks entering higher education, existing recruitment strategies at other institutions, and national trends in minority enrollments. In addition, discussions were held with JSCC admissions staff and a set of short- and long-term enrollment goals were established for black students at the college. From these activities, recommendations for a recruitment strategy at JSCC were developed, emphasizing the importance of support for the plan at the highest levels and the creation of a positive "campus climate" for an effective recruitment program. It was also recommended that strategies be included to increase the available pool of prospective students and at least one staff position be established to coordinate black student recruitment and related activities. Finally, financial aid packages were recommended which de-emphasize loans in paying for college. Appendices include enrollment data, survey (cont. next page)

Instruments, and the student recruitment plan. (Contains 25 references.) (MAB)

 ED363135 FLO21617 Using Diverse Texts To Improve the Reading Proficiency of High School Students of French.
 Pulliam, Brenda J.

79p.; Ed.D. Practicum, Nova University.
 EDRS Price - MFO1/PC04 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEMAR94

A study investigated the use of varied reading materials to improve French second-language reading skills, found to be unacceptably low at the second-year level. Subjects were 30 high school students of second-year French. A pretest of reading skills and a language and reading attitude survey were administered to the students. Subsequently, a 30-week unit of reading instruction was taught. The unit used diverse texts, including short stories, songs, menus, recipes, advertisements, and cartoons. A survey, individual activities, and a posttest measured outcomes. Students demonstrated improvement in the following areas: reading in French with satisfaction and ease; retelling stories; listing vocabulary words by free association; comprehending main ideas and key details; using context clues to make logical guesses about word meanings; using visual clues to respond to statements in French; and creating a visual based on a description written in French. Results suggest that the method used was effective in improving reading skills and attitudes. The reading attitude survey, a general reading comprehension test, and a pre/posttest of one passage are appended. Contains 59 references. (MSE)

 ED363123 FLO21587 Improving Comprehension and Reading Vocabulary in First Grade English Speakers of Other Languages.
 Sanchez, Esther
 Jun 1993
 78p.; Masters Thesis, Nova University.
 EDRS Price - MFO1/PC04 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEMAR94

This report describes various strategies which were implemented to increase reading vocabulary and comprehension on consistently below average test scores of first grade students. A targeted group of 25 students were selected for this process. The objectives included increasing comprehension and reading vocabulary, developing a more positive attitude toward reading, and utilizing critical thinking to increase cognitive skills. The targeted group did not show the expected increase in reading comprehension and vocabulary. Yet, there was a substantial increase in their scores. Post test scores indicated that there was an increase in motivation and in a more positive attitude toward reading. Participation in class discussion utilizing higher order questioning was increased. Methods implemented in this study could facilitate an increase in comprehension and reading vocabulary. Appendices include testing instruments, student data, and graphic analysis of progress. (Contains 21 references.) (Author)

ED363002 EA025384 Partnership for Progress: Development and Implementation of a Framework for Increasing Partnerships between Business and School Districts.
 Reid, Mark E.
 1992
 129p.; Ed.D. Practicum Report, Nova University.
 EDRS Price - MFO1/PC06 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)

(cont. next page)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94

This document describes a practicum that developed and implemented a framework for increasing partnerships among business, industry, labor, and school districts. Implemented in a large, ethnically diverse district, the practicum sought to achieve the following objectives: (1) develop a comprehensive framework for forming partnerships; (2) increase training opportunities for students; (3) increase the number of apprenticeship relationships by at least 10 percent at all grade levels; (4) increase the financial and human resources contributed by business to the district by at least \$10,000; (5) develop adult literacy programs; and (6) develop career path programs at the secondary level. The author acquired governing board approval for a board policy designed to encourage business-school district partnerships; established a task force on business partnerships; developed a timeline for the partnership proposal; compiled a list of businesses within the district; developed and implemented a series of staff development activities; supported the development and implementation of a series of courses designed to support local business; compiled a list of partnerships at the beginning and end of the practicum; and developed and implemented a monitoring and evaluation system. Overall, the number of partnerships increased by 115 percent, and the project met or exceeded most of its objectives. Recommendations are made to devote sufficient funds and staff time to both development and ongoing evaluation; research local issues and task force training before implementation; provide inservice programs to all levels of district staff; create long-range goals; receive continuing input from local business; provide mutual benefits; and develop partnerships in conjunction with career clusters and paths. Nine tables are included. Appendices contain meeting agendas, a description of a career plan cluster, a "Business Partnership Satisfaction Survey," and a staff development presentation. (Contains 58 references.) (LMI)

School Age Center Connections: Site-Based Management Strategies for Implementation of Quality Programs.
 Wiliis, Dahna R.
 Oct 1993
 75p.; M.S. Practicum Report, Nova University.
 EDRS Price - MF01/PC03 Plus Postage.
 Language: English
 Document Type: PRACTICUM PAPER (043)

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94

This paper describes the outcomes of a practicum that initiated site-based-management strategies to support the consistent implementation of a quality school-age child-care program. Implemented at a multisite child-care center, the program sought to enhance staff members' job satisfaction and maximize their opportunities for professional growth and development. Program activities included scheduling based on individual staff availability and constraints; reimbursement for preparation time and ongoing training activities; increased participative decision making; improved organizational communication; regular feedback, coaching, recognition, and affirmation; and a cooperative network coalition. The program was evaluated by pre- and post- staff attendance at questionnaires, documentation of staff's professional-development activities, and analysis of staff's journal entries. Findings indicate that working together as site teams produced increased job satisfaction and enhanced overall program quality. Recommendations were made to: (1) prioritize need assessment within each program component and within the context of individual program locations; (2) clearly define the program's goals and provide participants with autonomy to achieve those goals; and (3) conduct periodic formative and summative evaluations. Appendices contain evaluation forms, checklists, staff training records and calendar, the program objectives, and the implementation plan. (LMI)

use of holistic philosophies relating to writing, in contrast to more conventional methodologies. Student participants included junior teacher candidates enrolled in primary grade level reading methods courses and senior special education student teachers. Collaboration between course instructors was required. The practicum writer administered pre/post surveys and questionnaires related to familiarity with holistic writing strategies and which enabled students to reflect on attitudes about writing; required students to prepare and teach lessons which incorporate journal writing, invented spelling, book-making, and self-selected activities; created a special needs/instructional adaptation section on lesson plans; observed methods students and special education student teachers in fieldwork; arranged oral presentations for students to partake in cooperative efforts; and prepared a handbook of writing ideas to be used as a course supplement. Results indicated that teacher candidates demonstrated ability to reflect on past attitudes about writing in order to develop changes in classroom practices. Post-surveys/questionnaires revealed a substantial increase in familiarity with holistic writing strategies and an increased awareness of the needs of the exceptional child. Data indicated a positive carry-over of concepts from junior level reading methods courses to senior level student teaching seminars. (One figure of data is included; survey instruments, the lesson plan format, evaluation forms, and a handbook entry form are attached. Contains 83 references.) (Author/RS)

Strengthening Adolescent Identity Formation through Development and Presentation of Family Literary Document
McLeillan, Francis R.

1993
74p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEMAR94

A practicum was designed to improve a high school sophomore curriculum in traditional English rhetoric and the study of literary classics by adding a component to strengthen adolescent identity formation. Students were encouraged to generate and present family literary documents including varieties of familial cultural artifacts. Portfolios, simulations and presentations constituted palpable measures of emergent awareness of commonalities among groups and within

the class. Using lessons published by experienced teachers in professional journals, students drew maps of points of family interest; wrote autobiographies, self-reports, and journal essays; invented coats of arms; created histories and scenarios of important family events; compiled family trees; and wrote and published essays in defense or in celebration of larger group/familial memberships. Through literary materials, students discovered enlarged self-identity and a base of support. Twenty-one students received payment for publishing articles in a newspaper with a circulation of 100,000. An enlarged concept of the familial was used to mitigate the effects of possible family dysfunctionality as students came to associate ethnicity, multiculturalism and peer group memberships with literacy and a positive cultural imaging process. Students experienced community building through shared literacy projects. Significant experiences of positive bondings dramatically enhanced students' powers of reflection, self-acceptance, respect for diversity, and media self-expression. Cross-curriculum experiences included art, historiography, graphics, critical thinking, speech and drama, ethnography, rhetoric, computer technology, music and cooperative learning. (Four color charts of data, and nine brightly colored student-developed coats of arm are appended. Contains 25 references.) (Author/RS)

ED362852 CS011448
Developing and Sustaining Early Literacy Experiences for Prek-Kindergarten Children through a Systematic Program of Home/School Involvement.
Ullery, Laurrie V.
1993
107p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC05 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEMAR94

The practicum reported here was designed to provide prekindergarten students from low socioeconomic families with successful early literacy experiences at home and in school. Emergent literacy training for school staff members and six structured parent/child workshops were designed to support the developing literacy of four-year-olds. Books and activities were circulated regularly. Computers and software were (cont. next page)

Identified to support child centered literacy development at school. Seven solution strategies to support the training of teachers and parents were developed so that young learners would be immersed in a literate environment both at home and in preschool. Analysis of the data revealed that prekindergarten teachers increased their knowledge of emergent literacy development after three staff development sessions. A team approach was successful in planning for and delivering parent training. Parents increased their use of literacy materials at home and also increased their knowledge of and willingness to participate in their child's literacy development by attending structured training sessions and reading aloud regularly to their children. (Four tables of data are included: survey instruments, sample parents' evaluations, a list of software ordered, the emergent literacy training agenda, a participant reaction summary, and a student generated computer sample are attached. Contains 44 references.) (Author/RS)

Document Type: DISSERTATION (041); PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94

The practicum reported here was designed to increase middle school students' participation in and use of the school library programs and resources. BookTalks, Read Alouds, a special service project, and three all-school programs were accomplished in this independent school setting during a three-month period. Middle school students were encouraged to read more and the habit of reading was promoted. BookTalk and Read Aloud strategies combining a wide array of books and curious correlating objects were developed; coordinated BookTalks and Read Alouds were presented by the parent and visiting county librarian; weekly service projects of reading aloud by seventh graders to the kindergarten class were organized and supervised; and three all-school events were designed, arranged, and carried out with the assistance and cooperation of teachers and parents. Analysis of the circulation data revealed that students were apt to check out

books that were reviewed or excerpted during the sessions. Overall, participating students showed an added interest in the featured books, and an enthusiasm for reading to the younger children while increasing their visits to the library. (A figure listing strategies to encourage reading, a figure listing middle school considerations for instructions, and a figure of data are included; four appendixes providing goals and objectives, the lesson plan format for BookTalks, calendar plans for BookTalks/Read Alouds, a general action plan for library programs, a discussion of special programs, and a calendar plan for the service project are attached.) (Author/RS)

Language: English
Document Type: DISSERTATION (041)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR94

This report describes the process used by a small, one-building kindergarten-through-grade-six school district in New Jersey to improve the reading scores of students who had fallen below their current grade in reading. Areas of need included improving the reading scores of students in regular education, special education, and English-as-a-Second-Language programs. In addition, the need to increase incentive programs to help motivate students, increase teacher awareness of specific student deficiencies, and develop classroom techniques to help improve student reading ability were recognized. Three major strategies were employed: student incentive programs; peer tutoring of second-grade remedial students by sixth-grade students; and learning style identification along with individualized instruction within the classroom. An average student reading grade level equivalent gain of 0.83 was recorded for students tested from April 1990 to April 1991, while students tested from April (cont. next page)

1991 to April 1992 realized a gain of 0.8. Despite the positive reading grade equivalent score realized during that period, non-mastery deficiencies were unchanged, and partial-mastery deficiencies increased by 45. Thirty-two of the 38 students tested in April 1990 and 22 of the 28 students tested in April 1991 received a final reading grade of C or above. An increase of 42% in students receiving recognition from 1990-1991 to 1991-1992 was realized for the combined implemented student incentive programs. Eight students showed no change, 12 students improved moderately, and 8 students improved greatly on teacher self-esteem appraisals. Twenty-eight tables and one figure of data are included; 20 references and 14 appendixes of data are attached. (Author/RS)

ED362817 CGO25078 Using Cognitive Counseling To Provide Learning Disabled Students With Skills Necessary To Transition From High School to College.
Weiss, Ira

1993 1:14P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC05 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; New York
Journal Announcement: RIEMAR94

The practicum reported here was designed to address the problem of a group of six college-bound 11th- and 12th-grade learning disabled students who attended a high school that did not have in place a program that would prepare them for the transition from secondary school to college. The intervention used cognitive techniques to raise the students' level of self-esteem while concurrently making the students and their parents aware of and knowledgeable about the many factors involved in the move to higher education and its impact on the student with a learning handicap. The intervention consisted of an 8-month, 32-session program of structured meetings, each dealing with a particular topic that both the literature and actual counseling experience indicated was important for a focus group to be knowledgeable about and sensitized to if the transition to the college community was to be successful. Each student's resource room teacher and parent or guardian met with the counselor on different occasions to give and receive feedback on the intervention. An evaluation of one of the students, each student's level of self-esteem increased as indicated on the Coopersmith Self-Esteem Inventory. Students, resource room

teachers, and parents/guardians evaluated the intervention as being helpful and of significant worth to warrant its continuation beyond the time originally allocated for its tenure. (Sample forms and letters are appended.) (Author/NB)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Washington
Journal Announcement: RIEMAR94

A practicum was designed to assist a private college in maintaining accreditation with the state of Washington in producing certified teachers with training in the identification and reporting of child abuse and neglect. Teachers and counselors are recognized as court mandated reporters of child abuse and neglect, but prior to the implementation of this practicum, no training in this area had been provided through the department of education at the college. A new state law went into effect during the implementation of the practicum requiring that all certifying teachers prove adjudicated coursework in child abuse and neglect. An approved syllabus was developed for an undergraduate course that included a substantial component on child abuse training, and for a graduate course specifically dealing with identifying and reporting child abuse and neglect within the school context. The courses were taught to undergraduate and graduate students. Analysis of pre- and post-tests revealed that, initially, graduate students in counseling were no better prepared to identify or report child abuse and neglect than were undergraduate education students. Both groups improved in understanding and skill during the course enrollment. Both groups were taught their roles as court mandated reporters, and the teacher trainees met the new state requirements for certification by taking either course. Appendixes include the pretest/posttest, syllabi for the two courses, and a detailed discussion of test questions directed at specific practicum objectives. (contains 31 pages) (cont. next page)

 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEMARR94

A practicum was designed to increase the number of elementary pupils who would be able to identify legal and illegal substances and to make informed decisions in their daily lives. Secondary goals of the practicum were to increase the number of pupils who attained good school attendance and who exhibited good self-esteem, and to increase the number of parents and community organizations participating in school activities. A supplementary curriculum appropriate for the given population, a school handbook to publish the drug policy and school procedures, parent ambassadors, community collaboration, and classroom instruction were major program components. Parents served as change agents for the students; learned, planned, and served in the classroom with teachers; and attended inservices and learned to monitor the school grounds and become drug-free advocates in their communities. An evaluation of the practicum revealed that parent involvement improved significantly and the pupils were better able to identify factors related to substance abuse, make informed decisions, and make positive attitudinal changes. Additionally, teachers, parents, and the community formed partnerships. Parents became school advocates for a drug-free environment. Noted gains were made in student attendance. An unanticipated result was the redefined role of the counselor as a change agent. This role was demonstrated by the many informal counseling sessions that were needed to assist parents, teachers, and other participants in the program. The appendixes include survey forms and survey results. (Contains 49 references.) (NB)

Increasing the Availability of Career Education Materials for High School Teachers through the Creation of a Career Resource Center.
 Zalinsky, Sandra H. O.

1993
 96p ; Ed.D. Practicum Report, Nova University.
 EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.
 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; New Jersey
 Journal Announcement: RIEMARR94
 A practicum project involved the establishment of a career resource center in one high school of 1,300 students to provide high school teachers with a wide variety of career education materials in a centralized location. Materials housed in the center were obtained from various sources: donations from local businesses, materials from workshops attended, materials from teachers and administrators, and purchased career education materials. The materials were catalogued and a listing of the materials in the center was made available to all the high school teachers. The teachers were then able to borrow materials to meet the curriculum and instructional needs of their students. An evaluation form on the usefulness of the center was designed and administered to the teachers. The evaluation revealed that 59 of the 100 teachers did borrow materials from the center; 43 of these teachers were repeat users of the career center. Teachers reported that they considered the center a useful resource. The most popular types of materials borrowed were individual college catalogues, career catalogues, and occupational/career pamphlets. Most of the materials borrowed were used on an individual basis requiring a written report/response from the students. Students also appeared to benefit from the establishment of the center. The practicum met all expectations in assisting graduating high school seniors in declaring a career direction. The resource center was well received by teachers and students alike. Appendices include survey forms, assessment results, materials inventory form, and a categorized listing of available career education materials. (Contains 38 references.) (NB)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Arizona

Journal Announcement: RIEMAR94

A practicum was developed to implement a career awareness program for pregnant and parenting teenagers as a part of a continuum of services provided to adolescents by a nonprofit agency. The overall goals of the program were to help participants become aware of their identity and ambitions, to assist them in setting educational and career goals, and to help them in developing an action plan for the attainment of these goals. The established curriculum "Career Choices" (Bingham and Stryker) was used, supplemented by other life-skills materials, two commercially-marketed test instruments, video presentations, and a guest speaker. The seminar was held weekly in the agency's offices; attendance fluctuated between 4 and 11 participants. Transportation and child care were provided through the involvement of volunteers and an informal supper was served each week. All participants completing the program successfully identified one or more areas of career interest and completed a Personal Action Plan meeting minimum standards. Goals set for employment of participants were met but those established for educational continuation fell somewhat short of expectations. The program was successful as a component of services to teenage parents; however, most participants required additional, sustained, and individualized support. The appendixes include a participant Personal Action Plan form and a supplementary questionnaire. (Contains 39 references.) (NB)

Descriptors: *Adolescents; *Career Awareness; *Early Parenthood; *Independent Living; Parents; Personal Autonomy; *Pregnancy

techniques in an effort to improve the negative self-concept of sixth-grade black male students who were involved in rampant acts of verbal and physical aggression that disrupted the flow of class activities. Peer facilitator training was provided for the boys. Other components of the program included mentors for daily class visitation; biweekly counseling sessions; a sixth-grade boys' club; letters to parents; and teacher in-service training in a violence prevention curriculum to be incorporated into the established science, mathematics, and social studies curricula. Sixteen sixth-grade boys were involved in the program. The results revealed that the boys' club was well attended; participants showed improvements in the happiness, satisfaction, and behavior items on the Piers-Harris Children's Self-Concept Scale. Fourteen of the 16 boys reported satisfaction with the experience of being a peer facilitator. Both sixth-grade teachers in the school gave positive ratings to the success of the program for improving the negative self-concept of sixth-grade black males through peer facilitation. There was a drop in referrals to either the counselor or the principal for the boys during the practicum implementation. Survey instruments and correspondence are appended. (Contains 39 references.) Inappropriate behaviors, family crises, medical traumas, and poor grades or previous grade retentions affected the academic achievement of sixth-grade students identified as at-risk by school staff. A two-fold intervention program was developed to help these students (N=59). First, support and cocurricular programs were expanded to encourage more student identification with and participation in school. School staff counseled students in small groups on a regular basis to offer academic and emotional support. Adult and peer [17] (cont. next page)

A practicum was designed to employ multiple intervention

tutoring programs were established to support academic progress. Second, collaborative efforts with the local mental health center resulted in the Families and Neighborhood Schools project and a school-based adolescent counselor. This project offered student and family support through interagency referrals; integrated human services; individual and family clinical therapy; and multisystemic, voluntary student group counseling. The interventions addressed the needs of all students at this school, with approximately 350 of the school's 950 students participating in the group counseling program. The group of at-risk sixth graders met or exceeded the project's goals for attendance, academic achievement, and discipline. The group achieved 95.7% yearly attendance and a 2.06 grade point average. The group accumulated 11% of the school's days lost to in-school suspension and only 7% of the days lost to out-of-school suspension. (This document includes 25 tables and 16 appendices of relevant materials.) (NB)

A project undertaken at the Gene A. Whiddon Adult Center in Fort Lauderdale, Florida sought to prepare teachers, laboratory aides, and students for the introduction of new computer technology in a language laboratory, specifically for instruction in English as a Second Language. The project had three phases: (1) computer literacy instruction for ESL teachers and lab aides; (2) a supplementary series of inservice teacher workshops on adult learning, encouragement of student computer use, and assistance with teacher incorporation of new technology into instruction; and (3) production of a student manual, based on principles of adult learning and ESL instruction, to enable student use of the laboratory. The report describes the project and its implementation in detail, including specific objectives and results for each phase. Related institutional issues and instructional principles are also discussed. Analysis of the project's results indicates that all objectives were met or exceeded in each phase. Substantial appended materials include: a project timeline and objectives; pre- and posttests and skill checklists used for teacher workshops; evaluation forms; attendance data; statistical analyses; computer usage information; student survey results; and paperwork related to the project. Journal Announcement: RIEFEB94
Truckee Meadows Community College (TMCC) is one of the four community colleges in the University of Nevada System (UNS) and with over 10,000 students, is the second largest community college in the state. When first appointed in 1986, TMCC's new president established student recruitment as the top priority. Particular areas of concern were the decreasing enrollment of minority students in the UNS, the recruitment of nontraditional students, and outreach programs for women. As part of an effort to develop a comprehensive recruitment plan for TMCC that could be used as a model for other Nevada community colleges, the recruitment literature was reviewed. In addition, recruitment activities at TMCC were assessed by means of an activity log, a referral card, a time and task log for all recruitment activities, ongoing data collection, the establishment of folders for all recruitment activities, the maintenance of goals for the recruitment office, and meetings with appropriate administrators. Based on information

ED361987 EC302458
Development and Implementation of Procedures for Identifying Black and Limited English Proficient Gifted Students.
Cowan, Ruth S.

Nov 1992 253p.; Ed.D. Major Applied Research Project Report, Nova University. EDRS Price - MFO1/PC11 Plus Postage.

Language: English Document Type: DISSERTATION (041): TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: Georgia Journal Announcement: RIEFEB94

This practicum report describes an identification prototype used by a large metropolitan school district (Gwinnett County, Georgia) to identify giftedness in black and limited English speaking students. Underrepresentation of these groups in gifted programs is seen to result from: teacher reluctance to refer students from the target populations; the inappropriate use of conventional assessment measures for evaluating the intellectual ability of these students; and the problem of a narrow definition of giftedness mandated by state regulations. Five pilot schools across three instructional levels were used to evaluate the intervention. A three step solution strategy included: (1) staff development for classroom teachers; (2) an expanded evaluation sequence using nontraditional subjective and objective evaluation instruments; and (3) the use of multiple criteria for making gifted program placement recommendations. Implementation of the procedures reduced the underrepresentation of target populations in gifted programs in the five pilot schools. Forty-two appendices provide project details, assessment forms used in the gifted program, letters, data tables, and other supporting material. (Contains 46 references.) (DB)

Using Facilitated Communication To Improve Yes/No Responses in Elementary Age Non-Verbal Severely and Profoundly Mentally Handicapped Cerebral Palsied Students.
Barabash, Margaret K.
26 Jul 1993 83p.; Master's Practicum Report, Nova University. EDRS Price - MFO1/PC04 Plus Postage.

Language: English Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida Journal Announcement: RIEFEB94
This study evaluated the use of facilitated communication to improve basic communication skills with five nonverbal severely and profoundly mentally handicapped students (11 and 12 years old) with cerebral palsy. Subjects were trained in the use of facilitated communication and in activities that encouraged students to point to "yes" or "no" on a communication board. Mastery was measured by the number of correct yes/no responses shown during biweekly activities. Four of the five students mastered both communication objectives (pointing and choice making) and three students were using communication boards routinely at home. One student was using a communication board for more general communication purposes and appeared to have academic skills at about the fourth grade level. Facilitated communication is seen as a tool to unlock the capabilities of individuals assumed to be incapable of real communication. Appendices include a sample of dialog made possible through facilitated communication. (Contains 18 references.) (BD)

Developing a Sequential, Relevant Approach to Research Writing for High School Juniors and Seniors.
Kirkland, Nancy C.
1993 123p.; Ed.D. Practicum, Nova University. EDRS Price - MFO1/PC05 Plus Postage.

Language: English
(cont. next page)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEFEB94

A practicum was developed to restructure 11th and 12th grade research modules, using a team planning approach to design and implement a sequential, developmental research program that would be relevant to the personal and academic goals of the students and produce high quality research products. This approach embedded the process of inquiry into the total English curriculum and emphasized to the student: the essential nature of research to successful living. Objectives for grade levels were determined and media center access was maximized through the cooperation and collaboration of the school media specialists. Central to the successful progress of the program was the collecting and sharing of classroom activities and strategies designed to enhance student ownership of research findings and to augment fluency and voice in reporting. Tutorials were developed to assist students in utilizing available technology, not only for the searching stage, but also for the publishing of the reports. To address relevance and application issues, teachers allowed more student choice in selecting life-related topics, encouraged the use of personal interviews and surveys, matched students with adult writing partners, and shared research findings with interested members of the community. The overall practicum outcome was positive. Eight of the 10 groups surveyed either met or exceeded the projected goals. Most students registered dramatic increases in their perceived ability to execute the research process and in their perceived confidence to publish a research report. (Thirty figures are included and six appendixes, including teacher and student surveys, are attached. Contains 30 references.) (Author/NKA)

Designed to increase literacy by improving parent school relationships.

Full Text Provided by ERIC

relationships in an inner city elementary school in the southeastern United States, a practicum provided workshops for 45 teachers as well as parents of approximately 900 students. These teacher workshops were designed to encourage teachers to keep an open line of communication with the parents all through the year and to encourage teachers to contact parents for positive reasons as well as negative ones. Six parent-teacher-child workshops were given to teach parents and children how to work together. Modeling techniques as well as "hands on activities" were all part of the Parent Teachers Association and Parent Outreach Program. Sign-in sheets for parents, teachers, and children were provided and data were collected after each session. Checklists, questionnaires, and surveys developed for the practicum were used. Outcomes of this practicum were very encouraging; all of the objectives were achieved. Findings suggest that teacher workshops designed to help teachers reach out to parents should be an important part of the curriculum. (Thirteen tables of data and three figures are included; 27 references and 13 appendixes, including a parent survey form, outreach material, and workshop agendas are attached.) (Author/NH)

Journal Announcement: RIEFEB94
To address middle school students' lack of motivation for recreational reading, the practicum reported here integrated activities designed to improve student attitudes toward reading into a middle school reading program. A target group of 75 students in sixth and seventh grades grouped homogeneously in remedial, average, or enrichment classes participated in the study. The program focused on four key activities for increasing recreational reading in school: sustained silent reading, journal writing, computer activities, and reading incentives. The classroom library was

(cont. next page)

Full Text Provided by ERIC

BEST COPY AVAILABLE

a focal point for students in self-selection of books during leisure time reading. Records of books read were logged in student journals as well as in the computer database. An after-school Reading Club was initiated and various other incentive programs were implemented. Outcomes were measured by comparison of student pre- and post-attitude surveys, teacher observation of books read and recorded, and participation in the reading club. Results indicated that students view reading as less important than other activities like watching television, listening to music, or participating in sports and hobbies. Nonetheless, students today are reading when able to choose what they read rather than what adults feel they should be reading. Eight appendixes of data and survey materials are attached. (Contains 32 references.) (Author/NKA)

Identification and Analysis of Learning Preferences of Mentally Ill Adults in Rehabilitative Psychosocial Therapy at the Anderson Mental Health Center.
Newman, Michael K.
May 1993
67p.; Ed.D. Practicum report, Nova University.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: South Carolina
Journal Announcement: RIEFEB94

A study identified and analyzed the learning preferences of 17 seriously and chronically mentally ill adults participating in the rehabilitative psychosocial therapy program at the Toxaway Church Site of the Anderson Mental Health Center. Staff perceived as boring and unfocused the traditional treatment approach that relied mainly upon chemotherapy and recreational activities that were not individualized or designed to develop specific life management skills. Learning styles of the patients were tested and identified, and data were analyzed to determine individual and group learning needs. Data analysis indicated that chronically mentally ill adults did have unique learning strengths and weaknesses that could be identified. Twelve patients tested neutral on motivation to learn, two tested high, and three tested low. Sixty-five percent did not prefer to learn in a variety of ways; they had very specific ways that they preferred to learn. Eighty-eight percent preferred structured learning. 65

percent chose to learn with peers, and 76 percent preferred to have authority figures present while learning. Recommendations included testing of all patients in the rehabilitative psychosocial therapy program and development of a therapeutic educational program that used learning styles in a therapeutic educational approach. (Appendices include 51 references, productivity environmental preference survey, individual profile, and learning preferences of the patients tested.) (Author/YLB)

Dimensions of Learning: A Model for Enhancing Student Thinking and Learning.
Tarleton, Deena
Aug 1992
241p.; Ed.D. research project, Nova University.
EDRS Price - MFO1/PC10 Plus Postage.
Language: English
Document Type: DISSERTATION (041)
Geographic Source: U.S.; COLORADO
Journal Announcement: RIEUJAN94

This project examines the development of programs and strategies to help teachers include a variety of instructional behaviors that will, in turn, stimulate many kinds of student thinking. A voluntary group of teachers formed study teams to learn the Dimensions of Learning Model and implement strategies from the model in their classrooms. The first stage of the project was to assist the group in permanently changing their teaching behaviors. The second stage, reported in this document, was to assess the effect of the model's implementation on student thinking and learning. Several forms of assessment including videotaping, retention tests, questionnaires, application tests, and standardized tests were utilized. Results were compared with those of similar students in control groups who had not experienced strategies from the model or against preimplementation data from students in the experimental groups. In most cases, the experimental group achieved significantly better than the control group; in some cases no significant difference was shown; and in no case did the control group show better achievement. Twenty appendices comprise approximately half the document. (Contains 34 references.) (LL)

ED061229 SEO53790 **Moscow-Florida Middle School Cross-Cultural Linkage for Global Environmental Collaboration.**
Nix, Suzanne Dee
May 1993
118p.; M.S. Practicum, Nova University.
EDRS Price - MFO1/PC05 Plus Postage.

Language: English
Document Type: RESEARCH REPORT (143); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN94

To prepare students for the 21st century, students must be taught not only how to think, but also to think from a global perspective. As an extension of the Sister Schools Project of Dade County, Florida, this practicum centered on developing a Moscow-Florida cross-cultural educational linkage between a school in Moscow, Russia, and a middle school in South Florida. Dealing with shared environmental concerns, Moscow and Florida teachers collaborated to develop curriculum resources, strategies, techniques and activities to identify common global environmental concerns and to find possible solutions to these concerns. A major joint identified concern was the effect of global ecological imbalance on human health and disease. Educators from both schools engaged students in the cognitive processing skills of critical and creative thinking and in exploring the affective areas of attitudes, feelings and values. After inservice training on the teaching strategies of critical thinking and creative thinking skills, Florida teachers demonstrated a 21 percent increase in the actual teaching of these skills. While unable to establish an on-line telecommunications system between the sister schools, the sharing of ongoing correspondence was accomplished through the conventional methods of letter writing, faxing, personal delivery from persons traveling between the two countries. The results of this sharing and research were videotaped in an Earth Summit simulation and a jointly produced newsletter which included results of community surveys, creative writings, cultural art, pen friend correspondence and research results. The significance of this practicum resulted in the implementation of a project among educators from two diverse cultures which demonstrates that mutual respect and understanding can be established by working on a common concern. Seventeen appendices include questionnaires and survey results. (Author/MDH)

Document Type: DISSERTATION (041)
Geographic Source: U.S.; Connecticut
Journal Announcement: RIEJANS94

This research project developed two strategic plans for distance education in social work. The project involved use of a developmental problem-solving methodology, creation of a conceptual framework thorough a literature search, visits to sites that use distance education, consultations with experts, and attendance at local and national conferences. In addition the project resulted in the initiation of a pilot training program at the University of Connecticut (UConn) School of Social Work which included lectures and development of a technology and a 15-minute videotape. Administration of an effectiveness questionnaire with 57 students indicated a positive response to the UConn program. A questionnaire responded to by 96 directors of field education in Canada and the United States indicated that not many schools of social work are currently using distance education though some social agencies are beginning to use distance education. Overall the project concluded that distance education can enhance social work education, that it is already being used by other professions, that it has no geographic, physical or temporal limitations, and that it can be used to restructure social work education. Appendixes contain the UConn plan, the student questionnaire, and information on curriculum and teaching, costs, and evaluation. Contains more than 200 references. (JB)

A Comparison of Learning Styles between Asian and American Seminary Students. Research Methodology.
Algee, Alan; Bowers, WinefredJul 1993
34p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MFO1/PC02 Plus Postage.
Language: EnglishDocument Type: DISSERTATION (041)
Geographic Source: U.S.: Missouri
Journal Announcement: RIEJAN94
This study examined learning style differences between Asian and American seminary students at two post-baccalaureate Assembly of God seminaries. The study randomly selected 100 students from the Asia Pacific Theological Seminary (APTS) in Baguio, Philippines and the Assembly of God Theological Seminary (AGTS) in the United States of whom 24 from each institution responded. Students revealed their learning styles through the Kolb Learning Style Inventory which classifies learners as divergers, assimilators, convergers, and accommodators. The sample population also supplied information on sex, age, years of college, and nationality in order to examine whether these variables were related to learning style variations. Results of the study, though limited due to low response rate and not statistically significant, indicated that American and Asian seminary students did vary somewhat in their predominate styles of learning. Other variables also appeared related to Kolb's four styles of learning. Seminary professors can possibly expect students in an Asian seminary to be more often divergers while students in an American seminary are more often assimilators. Variations due to sex, age, and years in college occur in both locations. Appendixes contain copies of correspondence and a questionnaire. Contains 31 references. (JB)

Journal Announcement: RIEJAN94

A program was developed to address the needs of 20-day students with emotional and behavioral disturbances, who had been expelled from other special school programs. A small group format was used to teach and to practice fundamental social skills necessary for coping with the classroom environment. Groups of three children were formed on the basis of similar developmental levels and social compatibility. Each group received 10 hours of instruction, focusing on identifying feelings in self and others, understanding feelings, expressing feelings, and managing such feelings as anger and frustration. In addition, all of the school staff were trained in the curriculum content so they could assist with generalization from the program back to the home classroom. Twenty-three of 25 special educators endorsed the continuation of the intervention program beyond its pilot stage. (Contains 14 references and a bibliography of approximately 50 items.) (JDD)

language middle school in the Antilles Consolidated School System in Puerto Rico. The Ramsey School students are the dependents of transient, active-duty military personnel, or civilian federal employees. The program sought to reduce student discipline referrals and suspensions and to improve student satisfaction. Other targets for improvement included students' standardized test scores, teacher use of cooperative learning groups in the classroom, and teachers' perceptions about the program's effectiveness. Program outcomes were evaluated by a review of student discipline referrals and suspensions, administration of student achievement test satisfaction surveys, and analysis of student achievement test scores. The following middle-school practices were implemented: block scheduling, exploratory classes, teacher teams, an advisor-advisee program, inservice training, and a student activities program. All targeted areas demonstrated improvements, showing a decline in discipline referrals and suspensions, improved student satisfaction, improved teacher attitudes toward the program's effectiveness, and increased teacher use of cooperative learning groups and teaming activities. Sixteen tables are included. Appendices contain copies of the surveys, descriptions of program activities, correspondence, and minutes from meetings (LMI).

Journal Announcement: RIEJAN94

Three objectives were developed to help school districts deliver effective educational services to homeless children at two suburban elementary schools in Pinellas County, Florida. The strategies included an individualized tutorial approach to increase daily school attendance among targeted homeless children. A teacher inservice training program and manual to sensitize school personnel to the problems involved in educating homeless children, and a homeless project services pamphlet distributed to social-service providers to

facilitate communication with schools. Project-evaluation tools included: (1) school-attendance records for targeted homeless children (revealing that 91 percent increased daily attendance); (2) pre- and post-test results of teacher inservice training (showing participants' substantially increased knowledge about homeless children's unique problems); (3) a training manual for school and community personnel working with homeless children that enhanced teacher inservice training; and (4) a pamphlet identifying services available to homeless children and their families. Besides helping to increase student attendance, the tutorials succeeded in communicating a sense of self-worth and personal importance. Appendices include the project's inservice training pretest and posttest, the inservice training manual, (Contains 17 references.) (MLH)

Journal Announcement: RIEJAN94
A study confirmed the need for an ambulatory nursing experience as part of the vocational nursing (VN) program at the Long Beach City College (LBCC). Information on which to base the revision of the ambulatory care (AC) experience was obtained from a literature review and interviews with the following: AC administrators, California Board of Vocational Nurse and Psychiatric Technician Examiners, VN faculty, students who had completed the AC experience, staff of AC facilities, and California VN directors. The structure of the program was analyzed and modified to support a AC experience by amending the VN program philosophy and re-classifying the taxonomy of nursing diagnosis. Content was revised by synthesizing and integrating information from the literature (cont. next page)

review. The universal self-care deficits from Orem's Self-Care Deficit Theory of Nursing were used as the organizing principle to rearrange the six AC learning tools. The use of the five-step nursing process for vocational nurses was explored and validated. After revision, LBCC faculty and the AC agency administrators evaluated the experience, measuring it against Tyler's (1949) four fundamental curriculum development questions. An evaluation plan was developed from the literature on outcome assessment. (Appendixes include 246 references, interview outlines, evaluation results, LBCC curriculum structure documents, and student learning tools.)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIDEC93

This practicum report describes a 12-week project to decrease truancy and improve motivation and academic performance of three students (ages 12 to 18) hospitalized with severe emotional disturbances. A visible and powerful reward system using a menu strategy was developed and implemented in which students participated daily in establishing goals and reinforcers while moving toward increasingly intrinsic motivation. The project also involved a whole language approach to reading, a critical thinking instructional program, and development of a therapeutic bond with at least one teacher. Measurement of reading skills, attendance records, and students' verbal reports were used to evaluate academic achievement, improved attendance, and changed attitudes and behavioral patterns. The constantly visible menu showed goals and rewards on a daily, weekly, and monthly basis. Additionally, each week focused on a different area, including assessment and orientation, goal setting, self motivation, frustration management, oral language, written expression, reading comprehension, reading for pleasure, self-expression, daily living skills, self-discovery, and

evaluation/closure. All students increased attendance notably; improved their reading skills substantially, and appeared to improve their critical thinking skills and attitudes. (Contains 29 references.) (DB)

This practicum paper describes a training intervention project that was designed to improve classified employees' personnel selection and problem-solving skill. The project addressed the following personnel issues: legal issues of employment, critical thinking, job analysis, selection style, interviewing techniques, and employee induction. Fifteen head custodians from a Florida school district participated in a 6-week training program to decrease the probability of illegal hiring practices among entry-level managers. Methodology involved a needs assessment survey and pre- and post-test surveys. Upon completion of the program, participants demonstrated a strong growth in their knowledge of personnel selection and problem-solving, and a positive attitude toward the change in personnel-selection process and problem solving. The training program will be extended to other groups, such as personnel administration. Appendices include a trainer's guide, sample memorandums and letters, a certificate of completion, evaluation materials, and program handouts. Eight figures are included. (Contains 38 references.) Journal Announcement: RIEDEC93

The inability of students to become involved with writing assignments in two high-school sophomore honors classes was addressed at a writer's workshop by the implementation of collaborative learning, peer evaluation, conferencing, and broadened literature selection. Students responded to pre-workshop and post-workshop surveys to assess individual attitudes toward learning to write and writing abilities. Students were allowed to complete assignments in collaborative groups. Students were also allowed to choose the literature to be studied by the group. Results indicated increased interest in writing among the target group. Additionally, students in the target group demonstrated improved writing performance on the final writing project. Findings suggest that increased student participation in the selection of writing assignments and literature selections, along with interaction with peers on assignments, brought about improved performance on class writing assignments. (Twenty-six references and teacher and student survey instruments are attached.) (RS)

Geographic Source: U.S.: Florida
Journal Announcement: RIEDEC93

A study identified and compared writing needs of graduates of Criminal Justice and Drafting and Design programs at Westmoreland County, Pennsylvania, Community College (WCCC). Subjects, 115 graduates of the programs from 1972 through 1990, completed surveys. A total of 310 questionnaires were sent, for a return rate of 37%. Results indicated that: (1) writing is important to graduates of both programs, but significantly more (95%) WCCC Criminal Justice (CRJ) graduates than drafting and design graduates (40.9%) rated writing very important; (2) 95% of the CRJ graduates reported writing on the job every day compared to 63.6% of drafting graduates; (3) a significantly larger proportion of drafting graduates reported significant narratives, formal reports, and letters; (4) a significantly larger proportion of drafting graduates reported preparing instructions; (5) a significantly larger proportion of CRJ graduates than drafting graduates reported writing for readers inside their organizations; (6) 89% of graduates of both programs rated accuracy, clarity, and organization as very important; and (7) 90% of the CRJ graduates compared to 45.5% of drafting graduates recommended a second-level college writing course specifically targeted at their field. Findings suggest that writing is an important and frequent on-the-job activity of both groups. Recommendations include implementation of a writing course designed specifically for criminal justice majors and placement of more emphasis upon the importance of writing to all graduates of technical programs. (Twelve tables and 9 figures of data are included; 20 references, the pre-contact letter, the cover letter and questionnaire, and the follow-up postcard are attached.) (RS)

KR INFORMATION

Journal Announcement: RIDEC93
 A practicum was designed to motivate primary students to increase the quantity and improve the quality of their writing. Publication of student works was the prime motivating factor. Other objectives were to develop in students a more positive attitude toward writing and gain the agreement of teachers that the publishing of their students' written work would enhance their classroom writing programs. After 12 weeks of the implementation of the publishing center, the quantity and quality of writing increased. Also, student surveys indicated a more positive attitude toward writing, and teachers agreed that the publication of students' works enhanced their writing programs. The publishing center will continue to operate in future years and will be expanded to include Kindergarten and grades four and five. (One table of data is included; 28 references, an attitude survey for teachers, a writing attitude scale for students, a sign-up sheet for the publishing center, and a writing process handbook for teachers are attached.) Journal Announcement: RIDEC93
 The improvement of reading comprehension skills in a target group of at-risk students in the second grade of a North Florida school was achieved through the implementation strategies of parental involvement and collaborative learning. At-home parent-child literacy interactions increased and parents became active role models in a Parent as Readers In School Program. Students engaged in collaborative listening, speaking, writing, reading and thinking activities. Positive cognitive growth was indicated by data comparison of two pre-and posttests: the Hunter-Grundin Reading for Meaning Test, Level Two, and the comprehension skills sub-tests in the unit tests of the county adopted basal reading series. Data provided by parent surveys and the tabulation of weekly at-home reading time sheets indicated a substantial improvement in parent-child literacy interactions. The

strategies, methods, and results were shared with the faculty of the target school and local community educators via a workshop. (Eleven figures of data are included; 13 references, survey instruments, self-esteem measures, a reading time sheet, and letters to parents are attached.) (Author/RS)

Geographic Source: U.S.; Florida
Journal Announcement: RIDEC93

A program was designed to improve the reading achievement of second grade students in a rural Georgia school. An analysis of the problem indicated that: a higher percentage of second grade students from low socioeconomic conditions scored lower on standardized reading achievement tests than other second grade students; students who scored lower owned fewer books than those who scored higher; and those who scored lower did less recreational reading than those who scored higher. Interventions included a program of daily oral reading in the classrooms by teachers and recruiting parents to enroll their children in the Woodbine (Elementary School) Read Aloud Club. Parents who enrolled their children in the club agreed to read aloud to their children on a daily basis and turn in simple reading logs to the teachers each month. As a reward for their efforts, the children received free storybooks of their choice each month. The objectives were to improve the students' reading comprehension, word reading, and auditory vocabulary using the Stanovich Diagnostic Reading Test to measure any changes in reading ability. Test results indicated a 38.5% increase in auditory vocabulary, a 46.4% increase in reading comprehension, and a 43.6% increase in word reading for the approximately 70 subjects. (Twenty-seven tables of data are included; 53 references, 2 appendixes of (cont. next page)

Language: English

Document Type: DISSERTATION (040)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDDEC93

A program was developed and implemented to improve the reading achievement of 56 learning-disabled (LD) students in grades five through eight in a rural school district in South Carolina. Only 12% of the students were meeting the state standard in reading. Baseline test data indicated that reading achievement was from two to six grade levels below grade placement. Problems identified were absence of written basic skills curriculum aligned with the tests used to measure achievement; lack of consistent, effective instruction in the basic skills areas; and the need for more parental support and involvement in the education of students with special needs. Solution strategies for improving reading achievement of LD students included the development of functional basic skill curriculum guides, training for teachers in the use of direct instruction techniques, field testing the curriculum guide, inclusion of the basic skills objectives in the individualized education programs of the students, implementation of a direct-instruction model in the teaching of reading, use of the Corrective Reading Program, and involvement of parents. As a result of intervention strategies, 25% of the targeted students met the state standard on basic skill tests. Over 55% of the targeted students gained two or more grade levels in reading. The discrepancy between the students' estimated ability and reading achievement was reduced by 41%. Parent involvement increased from 10% to 75%. (Seventeen tables of data are included; 49 references, 10 appendixes of data, table of contents of the Students Offered Success curriculum, evaluation forms, and a newspaper article are attached.)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; California

Journal Announcement: RIENOV93

The major purpose of this study was to determine if students enrolled in an "Eyes on the Prize" telecourse performed better academically in utilizing a study guide than students who did not utilize the study guide. "Eyes on the Prize," a course offered at Evergreen Valley College (EVC), fulfills a two-year ethnic studies requirement for graduation from California community colleges. For several years, the College has operated the instructional telecourse with little or no consistency, consequently students were achieving low grades, resulting in a high attrition rate as well. In order to address this issue, a student study guide for "Eyes on the Prize" was developed. A literature review was conducted and a study guide was developed and evaluated by expert faculty members and revised. The control and experimental groups were selected establishing good internal validity. This study employed a t-test as the statistical measure evaluating the significance of difference between the two means. The student population of Evergreen Valley College is diverse in its ethnic make-up and the academic disciplines pursued by the student population. The telecourses that are offered on weekends, early mornings, and over local cable stations have great appeal for the Community College students. The revised study guide showed a relationship between the use of a "Eyes on the Prize" study guide and an increase in student success. The telecourse study should be replicated with other telecourses, and Community College Districts in order to (cont. next page)

establish external validity. (Author)

Using Multimedia To Improve the Aural Proficiency of High School Students of Spanish.
Sprayberry, Roslyn R.
1993 76p.; Practicum report, Nova University.
EDRS Price - MFO1/PC04 Plus Postage.
Language: English
Document Type: EVALUATIVE REPORT (142); PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIENOV93

An experimental study investigated the effectiveness of multimedia instruction in improving listening comprehension of high school students studying second-year Spanish. Specific comprehension difficulties were found in recognizing linguistic and cultural implications, making guesses based on key words and phrases, and understanding and responding appropriately to information given orally. Six major causes for the problems were identified: neglect of listening comprehension skills in instruction; student lack of discriminatory listening techniques; inadequate knowledge of Spanish vocabulary, syntax, and grammar, and native language interference; lack of knowledge of linguistic and cultural connotations in some words and phrases; inadequate textbook treatment of listening strategies; and ineffective native-language listening skills. A multimedia instructional approach was adopted with 50 randomly selected students. Techniques used include paired and group work, listening stations in the classroom, student-written cultural notebooks, student-generated lists of listening strategies, filmstrips and videos, use of Total Physical Response commands, student creation of visual aids, minidramas and skits, telephone conversations and interviews, creation of commercials, games, and guest speakers. Students were receptive to and enthusiastic about the process, and posttests indicated significant language achievement gains over the period of treatment. (MSE)

Program To Reduce Failure Rates of Ninth Grade Students.
Pantaleo, Sam J.
Dec 1992 103p.; Major Applied Research Project, Ed.D., Nova University.
EDRS Price - MFO1/PC05 Plus Postage.
Language: English
Document Type: DISSERTATION (041); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.: Colorado
Journal Announcement: RIENOV93

This report describes procedures to develop and implement a program to reduce ninth grade failure rates at a high school of 1,200 students in the center of a western city of 100,000. It is noted that grading data collected at the middle school and the high school levels have indicated that the number of failing grades increased substantially as students moved from eighth to ninth grade. The solution to the problem reported here involved a coordinated effort between middle and high school teachers to increase student academic success. The described program addressed problems associated with the middle school transition by having eighth grade students attend a shadow day and extracurricular fair to become familiar with the high school. Additional time was spent assisting eighth grade students in selection of classes for their ninth grade year and a peer leader program was implemented which provided academic and social support for incoming ninth grade students. Project results are presented which demonstrate that students involved in the majority of program interventions had a greater likelihood of succeeding in school and that ninth grade students who had frequent peer visits had fewer failing grades. This report documents the problem background and context, describes the project implementation, presents an evaluation of results, and discusses decisions on the future of the intervention. Appendices include survey instruments, teacher and peer leader comments, and a peer/mentor/leader program proposal. Contains 42 references. (NB)

Journal Announcement: RIE0CT93

Target Audience: Teachers; Researchers; Practitioners
This practicum was an 8-month project designed to improve the motivational level and academic success of African American middle school boys through high-interest and activity-based Africentric lessons. The goal was to motivate black middle school males to strive for academic excellence. This goal was necessary in order to eliminate the problem of nonchalant attitudes toward school due to culturally and historically biased curriculum and exclusion of learning styles and interests. Eight months of lessons comprised of high-interest and high-energy level activities were geared to motivating African American middle school males to strive toward academic excellence. A male rites of passage club was implemented. Observation data of the students' attitude and academic performance were collected, recorded, and charted monthly. The results of the practicum were positive. The goal and objectives were successfully reached and surpassed. In addition, two funding sources offered supplemental funding for the project for the 1991-92 and 1992-93 school years. (DB)

ED357986 S0022752 Utilizing Local Outdoor Resources as a High School Laboratory for Learning: The Problem of Implementation.

Crumley, William H.

1992
79p.; Ed.D. Practicum, Nova University.

EDRS Price - MF01/PC04 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIE0CT93

This practicum was designed to utilize local outdoor resources as a teaching tool and an extension of the

classroom. The single goal was to make utilization of this instructional strategy a permanent part of the school curriculum. On-site research, coupled with an extensive review of current literature, produced the finding that the problem lay in the difficulty of implementing such an approach. An interdisciplinary program of environmental studies was chosen as the vehicle through which the situation that existed could be transformed to the desire outcome. The curriculum for this program was designed around the notion of utilizing local outdoor resources as both an extension of the classroom and a means to engage students actively in the learning process. The findings of the practicum were positive. Use of local outdoor resources was integrated successfully into the curriculum and proceeded to provide a uniquely successful instructional strategy. Since the results of this project were constructive, this model can be recommended to similar curricular applications. (Author/DB)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIE0CT93

This practicum endeavored to improve science laboratory instruction for elementary students. The major goal of the practicum was to facilitate laboratory use so that teachers would incorporate laboratory experiences as an integral component in science instruction. To improve the instructional significance of the science laboratory, the writer developed and initiated a MAPS change process model (Motivation, Alternatives, Planning, Sharing) in collaboration with representative teachers. The committee acted in a leadership capacity to develop goal commitment, formulate strategic actions plans, communicate a shared vision, resolve implementation obstacles and monitor progress. Implementation included inservice training in effective science teaching strategies, coordination of community volunteer participation and documentation of worthwhile hands-on science laboratory (cont. next page)

activities. Outcomes of this practicum illustrated that improvement in science laboratory instruction is contingent upon teacher empowerment, community involvement and participation, facilitative leadership styles, an understanding of the change process and goal commitment. As a result of this practicum, achievement in science increased in daily grades and on standardized tests, student and teacher attitudes about science improved, materials for science activities were obtained and the community became involved in promoting excellence in science education. Journal Announcement: RIE0CT93

This practicum report describes the development of a systematic method whereby students would be able to select internship sites that demonstrate developmentally appropriate practices in early childhood education. Students in a child development internship program were provided guidelines for selecting an appropriate field placement. Students were also given an inventory with which to evaluate potential sites. Using evaluation tools that included questionnaires, checklists, and self-evaluation forms, students were able to select developmentally appropriate placements and to identify both appropriate and inappropriate practices in the classroom. Appendices include: (1) a copy of the internship placement questionnaire and a summary of student interns' questionnaire responses; (2) an inventory of classroom practices; (3) evaluation forms for cooperating teachers, students, placement sites, and college internship supervisors; (4) student guidelines for selecting internship placements; (5) a handbook for the internship program; (6) a preliminary letter to interns; and (7) letters to cooperating teachers. Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIE0CT93

The lack of leisure reading of learning disabled seventh graders was addressed by the implementation of a 3-part reading program. First, a sustained silent reading program was established school-wide on a daily basis. Second, a target group of 15 seventh grade learning disabled students participated in sustained silent reading with writing twice a week. Third, the same control group was involved in a reading incentive program to encourage leisure reading at home. Success was measured by comparing statistics important to student attitudes about reading, student reading habits, the length of time spent reading and responding to reading materials by writing in journals. Results indicated that all three areas were successful. (Appendices include pre- and post-survey instruments and results of student, parent, and teacher surveys; basic achievement skills sample and results; journal question suggestions; and faculty mid-evaluation results.) A study skills program was developed and implemented to improve spelling grades while incorporating new study skills techniques in a multi-ethnic and multicultural elementary school. A target group of eight fifth-grade students who lacked these skills was established. The program contained five basic strategies for increasing study skills and academic achievement: organizing and time management, note taking, establishing goals, guidelines and responsibilities, parental involvement, and increased academic achievement by working in a "buddy" system. Success was measured by comparing results of pretests and posttests, along with parental survey and involvement. All the program objectives were met, with the target group improving dramatically in all areas. (Appendices include assessment materials, analysis of assessment data, parental survey, and information that was distributed to students and parents.) (Author/RS)

ED0356855 PS020986 Developing Social Skills To Assist Developmentally Delayed Preschool Children in Overcoming Separation Anxiety In a Public School Setting.

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIESEP93

This study examined the effectiveness of 11 strategies designed to ease separation anxiety in preschool children. Subjects were 10 preschool children enrolled in a public school early childhood classroom for their first school experience. Each child was delayed in at least two of six developmental areas (social, emotional, cognitive, psychological, speech, physical, and cultural), and all subjects displayed behaviors related to severe separation anxiety. Children's behavior was measured by the Social Skills

Checklist, and an anecdotal record of each child's behavior was maintained. Techniques used to alleviate separation anxiety included: (1) displaying photographs of the child's family; (2) informing children of their parents' location; (3) playing an audio tape of each child's parent reading a familiar story or singing a song; (4) encouraging children to build houses with building blocks and to pretend to come to school; (5) helping children plan for each day's departure; (6) encouraging children to take home classroom objects, which served as transitional objects; and (7) being sensitive to separation anxiety indicators, including crying, refusing to eat, and thumb-sucking. Upon completion of the 12-week implementation period, analysis revealed that all children separated from their parents had participated in the entire early childhood classroom routine, on a daily basis, without displaying separation anxiety behaviors. (MM)

Geographic Source: U.S.: Florida
Journal Announcement: RIESEP93

A project investigating the effects of peer tutoring on students' academic achievement focused on use of tutoring with underachieving, limited-English-speaking 11th- and 12th-graders. The method was designed to use materials readily available and require minimal expenditure of teacher time and resources. Students ($n=18$) voluntarily attended tutorial sessions, some to prepare for the high school competency exam and some for assistance with specific subject areas. The tutoring program lasted for 12 weeks. The program's objectives were to: (1) improve students' pass rate on the high school competency test; (2) increase completion of homework; (3) improve grade point averages by half a point; (4) promote favorable attitudes in 85% of participants. Only the fourth objective was met, although progress was seen toward the (cont. next page)

second objective. Problems included limited student ability to attend tutoring sessions and the limited length of the tutoring program in light of the severity of student needs. Tutors expressed personal satisfaction and a desire to continue, and the program was extended. Appended materials include a statement of school commitment to student achievement, progress report form, letter to parents (English and Spanish), letter to teachers, tutoring program flyer, assessment form. (MSE)

This practicum was designed to develop a national model for teaching students with deafness or hearing impairments about their legal rights and responsibilities. The model included implementing a law-related education curriculum specifically written for students with deafness or hearing impairments, addressing their needs in legal knowledge and disability issues. Implementation of the practicum was achieved by conducting teacher training conferences, providing support and resources for teachers, making site visits, developing an activities schedule for a 12-week implementation period, writing portfolio assessment guides and charts, developing relationships with the media and Congressional leaders as a public relations effort, and assisting teachers with overall guidance for implementing the curriculum. Students showed increased knowledge about constitutional issues following the practicum, and teachers were positive about the training and use of the curriculum. Appendices contain the activities schedule, pretest and posttest, a curriculum evaluation form, a portfolio criteria chart, a student portfolio chart, and other relevant materials. (Contains 23 references.) (JDD)

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG93

This study was designed to improve the academic achievement of 35 third- and fourth-grade underachievers through improved self-esteem. Specific goals included focusing on self-concept and learning skills reinforcement, with the ultimate goal of increasing academic performance and motivation. Large group sessions with students focused on self-esteem enhancement strategies, study skills, and time-management techniques. Small group tutorial sessions focused on the reinforcement of math and reading concepts, while individual interaction centered on the development of mentor relationships with the school staff. Results of the practicum show that despite having experienced a traumatic event in the form of Hurricane Andrew, students readjusted and worked to the best of their ability. All of the objectives of the practicum were achieved: students exhibited significant improvement in self-esteem, reading levels, math levels, and overall grade point average; and teachers rated students' academic performance and self-esteem as having improved. Six appendices provide examples of a student attitudinal survey, a teacher response questionnaire, a survey of reading levels, a survey of math levels, a report card grade point average form, and an underachievement checklist. Contains 49 references. (MDM)

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG93

This practicum was designed to help children in an early childhood community center understand themselves and others as being unique, and having worth and dignity. It was intended that parents and teachers would develop a partnership and work in a collaborative manner on behalf of the children. Surveys of participation between parents and children resulted from parents' lack of training in effective parenting skills and teachers' lack of the skills they needed to work effectively with young children. To remedy this situation, a consultant implemented and evaluated 24 in-service training sessions and 8 counseling sessions with 29 parents and 10 teachers in child development, effective parenting skills, early childhood education, and multicultural education. The sessions provided parents with effective strategies for recognizing developmentally appropriate behaviors in their children, provided teachers with training in multicultural education, and built collaboration between teachers and parents. It is concluded that all goals of the practicum were met. Appendices provide related materials, including an African and African American diagnostic inventory; a family contact rating scale; a children's self-concept scale; parent and teacher survey questionnaires; and a classroom inventory checklist. Contains 42 references. (SM)

Document Type: PRACTICUM PAPER (043); INSTRUCTIONAL MATERIAL (051)

Geographic Source: U.S.; California

Journal Announcement: RIEAUG93

Target Audience: Teachers; Students; Practitioners
This practicum paper discusses the development, evaluation, and revision of a student sex education syllabus at American River College (California). The syllabus is intended to provide an alternative learning format to the traditional lecture format. After a review of the literature, it was decided to use a fill-in or sentence completion format for the syllabus. Then the following key topics were identified: (1) male and female reproductive systems, (2) birth control methods, (3) sexually transmissible diseases, (4) growth and development, (5) the right to be well born, (6) birth disorders, and (7) abortion. Learning objectives were defined for each topic, and main terms and concepts identified. Finally sentences encompassing objectives, concepts, and terms were developed and rewritten with blanks for key words and phrases. The first draft of the syllabus was evaluated by two experts at the college and changes were incorporated into the final draft. Literature review findings are discussed concerning the need for sexual information, the uses of supplemental materials, the effectiveness of these materials, alternative learning styles, and different models. The paper concludes with discussions of the implications and recommendations based on the American River College experience. It is concluded that the development of the student syllabus was a major improvement of the student learning process that existed in health science taught at American River College. The appendix (comprising two-thirds of the report) contains the Health Science Sex Syllabus itself which is intended to be used with the course textbook. Contains 28 references. (GLR)

ED355821 FLO21090
Haitian Folktales as a Literary Strategy for Elementary
Haitian ESL Students.
Oscarsson, Kristen L.

60P ; M.S. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida

Journal Announcement: RIEAUG93
To address low reading achievement of Haitian elementary school students receiving English-as-a-Second-Language instruction, a technique for reading instruction using Haitian folk tales was implemented. It was anticipated that by drawing on students' background knowledge of the Haitian oral tradition and using Haitian literature as a storytelling text, students would make the vital link between print and oral language. A target group of fourth- and fifth-grade Haitian students participated in storytelling sessions. Using a language experience approach, students recorded their illustrated stories in a book format, then shared their books and stories with other classes. Results showed increased reading skills in the target group. No significant gain was found in self-esteem, which was consistently high both before and after the project. The group indicated a preference for Haitian books over American books. Student writing doubled in quantity over the 12-week treatment period, and critical thinking skills were enhanced. It is concluded that use of Haitian folk tales was effective in increasing literacy skills. The reading assessment tool, initial and post-treatment student surveys, and the critical thinking checklist used in the project are appended. (Author/MSE)

An Inservice Training Program for Classroom Teachers to Help
School Age Nonenglish Speaking Students Develop Language
Skills.

Blau, Allan J.

1993

90P ; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English

Document Type: DISSERTATION (041)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG93
This practicum was designed to develop an inservice training program for classroom teachers to help them better meet the needs of non-English speaking students, and to help the non-English speaking students acclimate and socialize with other students and to better deal with the problems of a (cont. next page)

culturally diverse, if not economically diverse population. A series of six inservice lessons have been developed that were administered to private school teachers, grades 3-8. Questionnaires were administered before and after implementation of the program. The questionnaires measured teacher attitudes toward non-English speaking students in their classroom, and the attitudes of the non-English speaking students to classroom learning. An analysis of questionnaire results indicated that both teacher and student attitudes changed as a result of the program, and that there was an increase in the level of academic achievement of the non-English speaking students. (VWL)

ED355739 EC301996 Increasing the Degree of Compliance with Group Treatment Procedures in Seven Residential, Day Treatment, and Therapeutic School Milleus for Children and Adolescents. Jones, Jay J.
9 Feb 1993

150P.; Ed.D. Practicum Report, Nova University.
EDRS Price - MFO1/PC06 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: California

Journal Announcement: RIEAUG93

This practicum took place in seven treatment programs that offer residential, day treatment, and therapeutic school services to children and adolescents with social, emotional, and/or behavioral problems. Each of these programs provides milieu therapy including group-centered treatment guided by professional child and youth care counselors. The programs use a group-centered treatment model known as Situational Decision Making, and this practicum aimed to increase the degree of group leader compliance with the model's procedures. Improvement was addressed by the development and utilization of a group observation rating scale. Groups were observed and procedural items were scored, resulting in a percentage score called the degree of compliance. The scored instruments were returned to group leaders intending to increase the degree of compliance with prescribed group leader procedures, and summary results were shared with program administrators and managers. Groups were observed a second time to determine any change in degree of compliance. Results of the practicum indicate that average group leader compliance levels were substantially increased, although some individual group leaders did not improve at the desired level.

Administrators and managers became more accurately aware of the degree of compliance in their groups, and their confidence in their ability to evaluate the degree of compliance increased. Appendices include the telephone questionnaires and several versions of the rating scale for group-centered leadership training. (Contains 19 references.) (JDD)

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEAUG93

Target Audience: Practitioners
This practicum report addresses the educational needs of students with the visual disability of ocular or oculocutaneous albinism. Two booklets were developed, published, and distributed—one for regular education teachers of children with albinism and one specifically about the very young child with albinism. The booklets discuss the special needs of these children and interventions and devices available to assist them. Evaluation of the booklet for teachers by 20 educators of the visually impaired was highly positive, as was evaluation of the preschool booklet by 5 preschool day care teachers. A survey completed by 107 parents also supported the validity and usefulness of the teacher booklet. Additionally, an international survey which received 41 responses indicated a need for the type of information presented in the booklets in other countries. Appendices include the checklists used for both educator and non-educator groups, a copy of each booklet, and various letters distributed during the course of the practicum. (Contains approximately 240 references.) (DB)

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEAUG93

Target Audience: Practitioners

This practicum provided support to isolated parents whose institutionalized children with mental handicaps were being returned to the community. It focused specifically on an isolated single parent father with a teenage daughter. The father joined a parent group for support. Support was provided to the father by assisting him in accessing information on community services for the child, exploring the development of new services, individual counseling including unlimited access by telephone, encouragement and support to join a parent self-help group, development and practice of advocacy skills, role-playing preparation prior to meetings with government officials, debriefing following such meetings, and reinforcement and celebration of successful advocacy efforts. Following support and training, growth was noted in the father's knowledge of community services, his self-confidence and empowerment, his ability to develop a written community living plan for the child, and his use of advocacy skills to secure his child's future. Other members of the parent group showed similar gains, but had not moved as far along in the process. Appendices contain pre-interview and post-interview guiding questions and an individual community living Plan which addresses physical health, communication, psychological health, behavior, self-care skills, community integration, and projection of required services. (Contains 31 references.) (JDD)

Improving the Special Education Referral Process of At Risk Children by the Administration of Norm-Referenced Screening Instruments.

Glazer, Richard

15 Feb 1993

56p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAUG93
This practicum was designed to improve the process used to identify kindergarten and first-grade children who are at risk for academic failure and may need to be referred for a comprehensive special education evaluation. Prior to the practicum, the screening process consisted of a curriculum-based readiness measure which failed to identify children's cognitive potential and delayed further evaluation of children experiencing severe learning problems; grade retention was then used as a primary mode of intervention. The practicum involved the administration of norm-referenced screening instruments (the American Guidance Service Early Screening Profiles and the Wide Range Achievement Test-Revised) to assess children's cognitive abilities and levels of academic achievement. The strategy was able to be implemented by teachers, counselors, and staff other than the school psychologist. The practicum's objectives were successfully met. As a result of norm-referenced screening, 35 kindergarten and first-grade students (out of 112 eligible for Chapter 1 services) were referred for more comprehensive evaluation. Retentions were eliminated for the academic year. The strategy also provided developmental data in terms of children's ability and achievement levels, which should be useful in curriculum planning. (Contains 30 references.) (JDD)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEAUG93

This practicum was designed to reduce student apathy toward learning through the presentation of workshops and the conducting of collegial networking sessions in an effort to give teachers a broad base of strategies and interdisciplinary approaches that were intrinsically motivating to students. Four training workshops were designed and implemented; 10 collegial networking sessions were planned and conducted; all participating students and teachers were surveyed before and after practicum implementation; data were collected on student behavior, achievement, and teacher strategy use; and three booklets of strategies for participating teachers were developed and distributed. Analysis of student grades, teacher checklists, and student questionnaires indicated that the workshops and strategies did not seem to produce an immediate improvement in students' attitudes toward academic tasks. However, incidents of referrals and suspensions of participating students showed a favorable decline, tentatively suggesting a degree of positive change. Unexpected outcomes of increased collegial cohesion, professional confidence, and the creation of two informal teaching alliances based upon the tenets of this practicum offered a strong base for the long-term implementation of a more intrinsically motivating approach to teaching and learning at this school. (Two figures and eight tables of data are included. Appendixes contain school goals, lesson outline, strategies, checklist, response matrix, student questionnaire, flier, handouts, and closing interview form.) (Author/SR)

Journal Announcement: RIEAUG93

This report describes the procedures used by a New Jersey high school English department of 15 teachers to improve the critical thinking skills of their students and thus allow the students to assume greater autonomy in their learning. Emphasis was placed on improving critical thinking skills of the students through literature and writing activities and lessons. Major solution strategies developed involved coaching and conferencing observations by the English supervisor, with questioning patterns and student-centered activities as the focus for those lessons. Through teacher networking and staff development through individual planning as well as school, district, and state workshops, the English department improved test scores, increased student autonomy, and fostered greater critical thinking in the students. In addition, teachers became more student centered in their instruction. Twelve appendices, covering various data related to all, derived from the research study, are attached. (HB)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEAUG93

A practicum was developed which implemented various strategies to increase consistently below average reading comprehension scores of eighth-grade students. A targeted group of 16 students with middle ranking stanine scores was selected. Objectives included raising reading comprehension scores using task specific strategies, developing a more positive attitude toward reading, and utilizing higher order questioning strategies to increase cognitive skills. Although the targeted students did not show the expected increase in reading comprehension scores, 88% did show some degree of (cont. next page)

Increase. Posttest scores also indicated that overall attitude toward reading was more positive, motivation to read increased, skill in determining the meaning of unknown words through contextual analysis improved, and participation in class discussion utilizing higher order questioning strategies increased. Findings suggest that the utilization of test wise ness strategies could facilitate an increase in comprehension scores on standardized achievement tests. (Twenty-seven references, standardized test results, pre- and posttest instruments, the reading attitude survey, a blank individual reading log, a cloze test, a teacher tally sheet for higher level cognitive thinking, and tables of test results are attached.) (Author/RS)

Workforce Education and Training Requirements for Communication and Information Technologies at the United States Army Aviation Center.
Cupples, Michael Wayne
Jan 1993

151p.; Doctoral Major Applied Research Project, Nova University.
Language: English
Document Type: DISSENTION (O40); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Alabama
Journal Announcement: RIEAUG93

A research study identified the work force education and training requirements for communication and information technologies that form the key elements of a human resources development plan at the U.S. Army Aviation Center (USAACNC), Fort Rucker, Alabama, for the 1990s. Qualitative data were collected from key personnel interviews, discussions by a group of experts, and survey questions. Quantitative data were collected from a survey sample of 198 workers in the Directorate of Training and Doctrine, USAACNC. Analysis of results using developmental scientific methodology produced four categories concerning communication and information technologies: (1) mission, policies, and plans; (2) applications; (3) worker critical skills; and (4) work force education and training requirements. Results indicated that the mission of USAACNC must be more clearly understood. Policies must be created for systematic and planned implementation of state-of-the-art communication and information technologies and for development of organization and human resources. A crucial application was an integrated work station. Workers needed cognitive and basic computer

skills. Work force education and training requirements were grouped into strategy, scope, standards, and primary critical tasks. Appendixes contain the following: outlines of the U.S. Army Training and Doctrine Command and the USAACNC mission and organization; instruments; and key elements of the USAACNC human development resources plan. (Contains 144 references.) (YLB)

Improving Mathematics Achievement of At-Risk and Targeted Students in Grades 4-8 through the Use of Manipulatives.
Bryant, Veronica A.
1992
67p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (O43); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Maryland
Journal Announcement: RIEJUL93
This document presents a practicum designed to improve mathematics achievement of at-risk and targeted students in grades 4-6 in an upper-middle class suburban community through the use of manipulatives. The primary goal is to provide mathematics manipulatives to teachers that would assist in helping at-risk and targeted students. A secondary goal was to offer teachers and parents other strategies to help the identified at-risk and targeted students. An inservice workshop was conducted to familiarize teachers with teacher-made mathematics manipulatives and strategies that would be used during an 8-month implementation period. Monthly memos, peer tutors, computers, bulletin boards, morning math activities, and parent and teacher surveys were also used. There were 5 behavioral objectives to be attained by at least half of the 65 at-risk and targeted students of the study at the end of the 8-month implementation of the practicum: (1) improvement on students' 1990-1991 and 1991-1992 Program of Studies (POS) scores; (2) improvement on their second and fourth quarter report card grades; (3) improvement on data collected from the end of year survey; (4) improvement in use of mathematics manipulatives; and (5) 4 out of 7 teachers (cont. next page)

would be able to use mathematics manipulatives to effectively help at-risk and targeted students in identified mathematics objectives. Comparisons of the POS scores and students' grades indicated an increase in test scores and letter grades. Parent surveys collected corroborated the success of the students' progress and use of manipulatives. The results from the teacher checklists and survey indicated frequent use of manipulatives and other strategies. Appendices include teacher and parent surveys, a list of teacher-made manipulatives, a teacher questionnaire, a quarterly data collection sheet, a strengths and weaknesses table, and a log of unexpected events. (MDH)

Using Goal Setting To Enhance Self Esteem and Create an Internal Locus of Control in the At Risk Elementary Student.
Language: English
Document Type: THESIS (042); TEACHING GUIDE (052)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL93

Extending over a 14-week period, this study examined the effects of a program designed to enhance the self-esteem of at-risk students by developing an internal locus of control in the students. The program consisted of six major components: (1) a specified vocabulary and format; (2) goal identification and description by students; (3) student evaluation and selection of alternative actions to accomplish goals; (4) student journal writing showing reflective evaluation and identification of successful behaviors; (5) a scale to evaluate student goals; and (6) peer encouragement through class meetings. The target group consisted of 72 9- to 12-year-old students in two 4th grade and two 5th grade classes. The Piers-Harris Children's Self-Concept Scale was administered as a pretest and posttest, providing the data from which the discrepancy gap for showing improvement in self-esteem was formulated. In addition, serious behavior referrals for the first and second semesters were compared. Results indicated that students' self-esteem improved and fewer severe behavior referrals were necessary. However, attendance was not significantly affected. Related materials

are appended. (MM)

A program implemented in a school district in central New Jersey was designed to: (1) create at least four magnet school options for elementary school children; (2) reduce the suspension rate at the elementary level; (3) reduce the student referral rate for special education; (4) decrease the number of students requiring basic skills services; and (5) develop a new means of assessing kindergarten students. Over a 10-month period, magnet programs were developed, parents surveyed, and in-service training provided. Programs in science and technology; fine, visual and performing arts; and international studies; and two programs referred to as "Early Childhood" and "An Academy," were developed. Preliminary evaluations of the project showed that its objectives were met. As a result, the project will be expanded to the middle school level. (HOD)

Implementing a Training Workshop To Improve Parent Use of Appropriate Home Activities with Kindergarten Children.

Neitzley, Sharon C.
 May 1992
 104P : Master's Practicum, Nova University.
 EDRS Price - MFO1/PC05 Plus Postage.

Language: English
 Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEJUL93

In response to parents' expressed need for appropriate academic strategies to be used at home with their kindergarten children, a series of parent workshops were designed to explain the philosophy of developmentally appropriate practices with children and to train parents to select activities that followed the philosophy. Participating parents were asked to list the activities they shared with their children during the 12 weeks of the program. As part of the first workshop, a home activity list and home activity calendar were explained. The emphasis of the workshop was on choosing a variety of appropriate activities on the activity list, especially in the language area. Parents were shown different ways to use storybook reading effectively and various strategies to develop children's writing ability. The second workshop focused on the areas of math and critical thinking. Models for questioning techniques and suggestions for creative activities were provided. A third workshop was conducted as an opportunity for parents to discuss their successes and difficulties with the activities and to brainstorm for new ideas. A follow-up survey of the parents revealed that the workshops had been successful in training parents to choose appropriate home activities. Parents surveys, a home activity calendar and activity list, and other related materials are appended. (HOD)

(160)
 Geographic Source: U.S.; Maine
 Journal Announcement: RIEJUL93
 In response to stipulations in the 1991-1993 collective bargaining agreement between the Maine Technical College System and the Maine Teachers Association Faculty Unit, a committee was formed at Northern Maine Technical College (NMTC) to review and refine the faculty evaluation process. To assess faculty perceptions of the current evaluation practices and criteria, the committee conducted a survey of all 47 full-time faculty at the college. The survey instrument listed potential uses of evaluation results and evaluation criteria and asked respondents to rate the extent to which these items were currently in use at NMTC and the extent to which they should be a part of NMTC's evaluation practices. In addition, respondents were asked to indicate the extent to which certain problems existed in NMTC's evaluation approach. Surveys were returned by 27 faculty for a 57.4% response rate. Major conclusions drawn from the study included: (1) evaluation data should be shared with faculty and coupled with a plan for improvement; (2) the six evaluation criteria highly favored by respondents were classroom effectiveness, curriculum development, reliability, innovative teaching, safety of the teaching environment, and interpersonal communication; (3) the reward system was seen as ineffective; and (4) faculty strongly viewed trust and communication issues as problems needing attention. An analysis of results by academic division, a description of different types of evaluation criteria, a review of the literature on faculty evaluation and teaching excellence, and the survey instrument are included. (PAA)

 Geographic Source: U.S.; Florida
 Journal Announcement: RIEJUL93
 (cont. next page)

The purpose of this practicum was to develop a program for volunteers in an elementary school media center that allowed volunteers to be more independent from the media specialist. Phase I of the program, highlighting school volunteers as Target Group I, included a questionnaire, interviews, delegation of specific tasks, a posted duty roster, an advance scheduling calendar, and a daily time sheet. During that time, the media specialist, with input from the volunteers, developed new procedures and materials, including four complete instructional units, designed to prepare volunteers for maximum efficiency in their work. The main development was a series of videotaped lessons supplemented with information handouts, activity sheets, and pretests, which also served as posttests, and individual progress charts. Four lessons explained basic terminology and the fifth described procedures for a special project. Home volunteers constituted Target Group II, which used a correspondence form of the training program during Phase II. Observations recorded in the media specialist's journal indicated widespread effectiveness of the program. It was concluded that personal factors which arose were often as important to the success of the volunteer program as were the specific organizational strategies of volunteer progress, responses to recruitment efforts, and testimonial letters from volunteers and faculty are included in the appendix, which comprises two-thirds of the document.

Meeting the Needs of Parents of Preschool Handicapped Children through Increased Support Services.
Cormany, Ernestine E.
19 Oct. 1992
72p.; Ed.D. Practicum Report, Nova University.

EDRS Price - MFO1/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL93

This practicum report describes development of a system of family support services for 56 parents of preschool handicapped children (ages birth to 3) in an early intervention setting. A preliminary survey was administered to determine family needs. A family support group was then developed which met monthly for fellowship, networking, work projects, and parent education. Individual family conferences

were held to develop Individualized Family Service Plans (IFSP). Also, a parent handbook was developed and disseminated to parents. Results of a post-intervention survey indicated significant feelings of increased support and a positive shift in attitude by agency staff from a child-focused approach to a family-centered philosophy. Recommendations to others considering establishing such groups are offered and include: provide transportation and child care, develop a program committee made up primarily of parents to determine topics and activities, stress a family-centered philosophy in all staff development activities, and have an experienced parent partner help parents prepare for the IFSP meeting. Appendices include the parent survey, a parent letter, a parent support group information sheet, meeting/activity notices, and an IFSP model. (Contains 54 references.) (DB)

The Development of Effective Teaming Practices To Meet the Needs of Seventh Graders.
Deason, Juanita C.
Dec 1992
69p.; Practicum Report, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJUL93
Outcomes of a teacher-teaming program that was implemented among seventh-grade teachers at a Florida middle school are described in this practicum report. Training sessions on effective teaming practices were initiated to address the lack of effective teaming practices among the seventh-grade teachers. Eight seventh-grade teachers participated in a 12-week workshop program designed to increase their awareness of students' affective needs. Teachers completed pre- and post-test surveys of teaming effectiveness. After completing the workshop, teachers reported more positive attitudes toward teaming and used teaming practices more frequently. The teacher teams implemented several new programs designed to increase student self-esteem, which contributed to a significant drop in the number of student discipline referrals. Appendices contain student award certificates, team goals, survey data, and a critical thinking checklist.

Geographic Source: U.S.; Florida

Journal Announcement: RIEJUL93
 A practicum, in an alternative high school work setting, was designed to deal with the problem of a deficiency in the writing ability students needed to express themselves skillfully and adequately. The goal was to increase writing involvement and writing ability. The objectives included the organization of a writing program, the improvement of written communication for various purposes, an increase in writing participation and quality, and a lessening of writing apprehension with an increase in positive attitudes. The implemented solution centered on the initiation and operation of writers' workshops, utilizing process writing, modification of the teacher's role, student-centered classrooms, and student selection of topics and projects. The main idea in the workshop was for much writing to take place in an environment that encouraged participation, writing improvement, and risk-taking. This represented a start toward bringing needed change to the writing program of the school. The overall increase in writing quality was not documented, but a positive movement was seen in the lower section of the assessment range. More time may be needed to show an increase. The degree of participation, the amount of work accomplished, and the improvement in many attitudes was refreshing. The idea of a safe environment was fulfilled, and much writing took place with the students beginning to assume ownership of their own work and their learning. (Two tables of data are included; 38 references, a questionnaire, and a perception survey are attached.) (Author/RS)

Geographic Source: U.S.; Florida

Journal Announcement: RIEJUL93
 A practicum was designed to devise a system of literacy instruction to train teachers to select appropriate text for at-risk students by an authentic assessment of the 'running record,' as a starting point for meeting the literacy needs of each individual student. (The 'running record' is a written record of the student's reading as observed and recorded by the teacher.) The system was constructed in a staff development inservice session which involved a period of 15 weeks. Inservice training sessions on the running record were developed; pre- and post-questionnaires and the Theoretical Orientation to Reading Profile were administered to the teachers; pre- and post-running records and writing samples of the at-risk students were administered; demonstration literacy lessons were prepared for the teachers; and teachers were assisted in selecting appropriate text for at-risk students. Analysis of the data revealed that after the inservice training on the running record and early literacy sessions, the teachers were able to select appropriate text for the at-risk student. The key factor in the accomplishment of the practicum was the literacy inservice training sessions attended by the teachers. (Three tables of data are included; 38 references, the pre- and post-assessment teacher interview, and a sample running record are attached.) (Author/RS)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: California

Journal Announcement: RIEJUL93

This program was designed to provide Acquired Immune Deficiency Syndrome (AIDS) prevention education for African-American women of child bearing age at a child care center which serves low income high risk families. The primary goal was to reduce the risk of African American women at the child care center for contracting the Human Immunodeficiency Virus or AIDS and to reduce the risk of these women transmitting the disease to their future offspring. Although the workshops were originally targeted to parents and staff at the agency, no parents attended the first session so the sessions were closed to staff only. The ethnic composition of the sessions included 15 African-Americans, two Caucasians, two Asians, and one Persian. The age range of the women was 21 to 54 years old. Participants included teachers, teacher assistants, supervisors, office managers, social workers, and a mental health consultant. Five workshops were presented on the following topics: facts about AIDS/HIV; feelings and attitudes; meeting a person with HIV/AIDS; processing feelings (i.e., integrating the factual, emotional and social aspects of HIV/AIDS) and reviewing prevention; and an AIDS awareness assessment. Analysis of the data suggested that at least 14 or more African-American women of child bearing age at the agency have sufficient knowledge about AIDS and skills in risk reduction behaviors. The women's enthusiastic responses in the small group discussions suggests that they are committed to disseminating AIDS awareness information throughout the child care center communities. The appendices include the preliminary survey form as well as other assessment forms with responses. (ABL)

**Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE
(160)**

Geographic Source: U.S.: Florida
Journal Announcement: RIEJUL93

The goal of this group counseling and alcohol education program was that inner city elementary children whose parents frequently drink alcohol would possess knowledge and techniques to help them to cope with their parents' drinking. It was also expected that parents and school personnel would acquire the training and skills to effectively assist these children through their anger and ability to develop effective coping skills at home and in school. Students were self-selected and met each week in seven counseling groups of five students each. Alcohol education training sessions were held for teachers, parents, and groups with students. Weekly 1-hour workshops were held for participating parents. At the end of the year-long program 21 parents were given the Parent Post Questionnaire; 19 teachers were given the Teacher Post Questionnaire; and 35 students were given the Student Post Questionnaire. The overall results of the program were positive with 85% of the elementary student being able to effectively cope with the parental alcoholism. Further analysis indicated that 85% of the teachers could effectively assist pupils in coping with the parental alcoholism. Also, 85% of the parents reported improved communication with their children. The group counseling and alcohol education were positive experiences for all of the students, parents and participating teachers. The initial individual consultations with teachers set the stage for a cooperative partnership between the teachers, students, parents, and program leader. The pre/post questionnaires are appended. (Contains approximately 120 references.) (ABL)

Journal Announcement: RIEJUL93

The purpose of this study was to develop a survey instrument that could be used to determine the degree to which faculty members perceive themselves to have knowledge and skills that they can use to help their adult students learn how to learn. Informal surveys of students at the Anderson Adult Education Center in South Carolina, which has a high dropout rate, indicated that students dropped out primarily because they found the subjects that they studied uninteresting and unhelpful. The center's director, however, believed that a large part of the problem was due to learning difficulties or a lack of "learning how to learn" knowledge and skills on the part of these students, and this idea led to the development of a survey instrument constructed to identify perceived strengths and weaknesses of the center faculty as regards their ability to model and teach their adult students the art and science of learning. Steps in the process included the following: a literature review that revealed that students need "learning how to learn" skills more than ever; creation of a draft of a survey instrument and its review by a panel of experts; sampling of the instrument with some faculty groups; and creation of the final version of the survey. The completed instrument is expected to be administered to all 16 faculty members of the center as soon as feasible and the results used to create a training program to meet their perceived needs as they go about educating their adult students. (The report includes the survey form and 47 references.) (KC)

Because hospitalization is often a frightening and traumatic

experience for children and their families, a practicum designed a system of inservice training experiences for hospital personnel. These experiences were intended to enhance or develop skills that would assist them in addressing the needs and concerns of hospitalized children and their families. The practicum was conducted in a 286-bed, private acute care medical center. Issues addressed included needs and concerns of ill children, communication skills, separation anxiety, pain management, and preparation for procedures. Methods of presentation included written materials and clinical supervision. The plan was implemented within one hospital department as a prototype program. Results of the practicum indicated positive changes in staff behaviors and an increase in the level of staff comfort in working with pediatric patients. (Appendixes to the report include employee sample surveys concerning needed workshops addressing pediatric issues, current department practices, and staff level of comfort. A sample evaluation form is also included.) (Contains 14 references.) (Author/KC)

This paper reports the development of a structured college health services orientation program manual for new staff nurses at Rancho Santiago College (RSC) in California. The orientation manual is intended to communicate detailed performance expectations, role responsibilities, institutional and departmental policies and procedures and to facilitate a smooth transition and adaptation in a short period of time for new staff. RSC is a large urban Southern California comprehensive community college with approximately 43,000 students and 2 Health and Wellness Centers. The study employed a literature review, a survey of other California community college health services, a modified Delphi technique for data collection, and a panel of RSC health services staff judges (cont. next page)

for evaluation during product development. The literature review indicated the importance of a structured orientation program. The survey of other institutions found that many components of orientation recommended in the literature were already being implemented, while others were not. The participation of the staff panel of judges fostered awareness of the need for such a manual. The orientation manual that was finally developed included a contents listing, a skills inventory, an orientation checklist, and an orientation evaluation form. Appendixes contain the survey questionnaire, the manual contents list, skills inventory, orientation checklist, orientation evaluation, and survey raw data results. Includes 42 references. (JB)

This study sought to clarify the appropriate content of a policy and procedures manual for college health services at Rancho Santiago College (RSC) and to involve the health services staff in developing such a manual. RSC is a large urban Southern California comprehensive community college. The study proceeded with a literature review, a modified Delphi technique for data collection, and a panel of judges for formative and summative evaluation during product development. The panel members were selected from the RSC health services staff in order to promote staff participation. The objectives of the study were met in the following ways: (1) panel members were able to identify what policies and procedures were needed by health services staff members to establish standards and uniformity in performance or role expectations and responsibilities; (2) the design of the study provided staff participation which resulted in a sense of ownership in the product; (3) the study increased staff awareness of the need for a departmental policy and procedures manual; (4) the study facilitated staff interest and motivation in the formation of the manual; and (5) the final table of contents developed

included the identified policies and procedures that the staff felt were needed. The table of contents itself is appended. Includes 35 references. (JB)

Journal Announcement: RIEJUN93
This practicum involved designing a special program for a target group of 19 high school Exceptional Student Education students enrolled in a culinary arts vocational program to build and maintain basic culinary arts skills. The program, intended to enable them to qualify for the Florida culinary arts completion certificate, was designed by the vocational education teacher in cooperation with the special education/resource teacher. The students were instructed in 8 of the 15 competencies included in the Florida state requirements, and were given intense verbal practice for culinary arts vocabulary and repetitive psychomotor practice with verbalization for weights/measures procedures and cooking/preparation techniques. Areas of competency included: cutting julienne style; chopping and dicing; slicing, shredding, and grating; knowledge of mire poix (a technique used in the preparation of sauces); breadng procedures; sauteing and deep frying; using weights and measures; and practicing sanitation, safety, and hygiene. Results indicated the students were able to perform 80 percent of the 8 competencies successfully, and it is projected that the students could also master the remaining competencies. Development of a special curriculum with different exit points which correlate with specific jobs in the culinary industry is recommended. Appendices contain a student flow chart, a curriculum framework, expected competencies, and an assessment form. (Contains 26 references.) (Author/JDD)

Journal Announcement: RIEMAY93
Target Audience: Teachers; Practitioners
A study was done to develop and evaluate a program designed to improve the academic and personal achievement of Hispanic American high school students. The study posited that the causes of Hispanic American students' belief that they could not achieve were: (1) dysfunctional learned behaviors; and (2) acculturation difficulties. Using findings on dysfunctional families, a 16-session biweekly small group module was developed to address students' learned behavior and acculturation difficulties. Themes of acculturation, personal growth, academic success, and professional development were included along with an achievement strategy. Nine of 11 volunteer students finished the program. Results were measured using pretests and posttests, attitudinal surveys, student journals, homework assignments, and a final student written report. Three students experienced a slight overall positive difference in attitude, and six students experienced negative changes. The negative variation was interpreted to mean that the program made the students aware of their own problems. In addition, students did not show the expected positive cognitive improvement in their grades on tests administered during the program. Appendixes contain the Family Drinking Survey, the Recovery Potential Survey, the short essay test sample, and a form for entering students' results. Included are 7 tables, 1 figure, and 121 references. (JB)

This paper describes a strategy that was developed to help elementary school students to become more interested, involved, and accepted in school. The strategy involved a pen pal project in which students wrote to other students at an elementary school who were in other classes and at different grade levels. The idea was presented as a fun activity, and teachers also were able to incorporate critical thinking skills into the letter writing project. The project fit very easily into the school curriculum. The results of the project showed an increase in students' positive attitudes toward school, classmates, friends, and teachers. Sixty-eight percent of the students surveyed reported that the writing project made a difference in their perceptions of the school. Ninety percent enjoyed becoming acquainted with another person not in the same classroom. Appendices include pre- and post implementation student climate surveys, teacher climate surveys, and a letter of intent to parents. (DB)

This practicum concerned a staff development program designed to promote cultural awareness among the staff members of a high school. The program consisted of three 2-hour sessions of intensive workshops that focused on: (1) the definition of culture; (2) nonverbal communication; and (3) the influence of culture in language development and social integration. The sessions were followed by three weekly 1-hour meetings in which participants shared experiences, concerns, and creative ideas as they implemented the skills learned at each session. During implementation, participants were required to select a limited English proficient (LEP) student to work closely with, for exposure and as a case study. At the end of the program, the student (case study subject) narrated participant's application of knowledge. An analysis of all the objectives and case studies revealed mastery of cultural awareness by the target group. Appendices include needs analysis instruments, training session outlines, pretests, posttests, and evaluation instruments. (Author/AA)

Many parents of children at risk for failure do not participate in school-related activities. Some parents have a negative view of all school contacts. This practicum examined ways to engage parents of children at risk of failure in informative and self-help experiences that helped the parents feel more connected with the school experience. Eight monthly newsletters and eight parent group forums were used to reduce parents' frustration and increase their participation. The newsletters provided information to parents and also provided an opportunity for parents to share topics of interest to them. The group meetings gave parents the opportunity to identify and discuss issues. Among the objectives were that parents would: (1) report a better understanding of child development issues; (2) increase their positive input into their children's academic lives; and (3) increase their participation in school-related activities and parent teacher conferences. All objectives were met. The parent questionnaire, parent group appraisal form, and other forms are appended. Contains a list of 44 references. (SM)

This practicum was designed to improve the level and quality of involvement of foster parents and social workers in the development of timely and compliant foster care plans at a child care agency in Ontario. The writer developed: (1) an agency policy that defined the unique relationship between foster parents and the child welfare agency and mandated the involvement of foster parents and the enhancement of the partnership relationship through a foster care plan; (2) an improved foster care plan format; (3) clear job descriptions for both social workers and foster parents; (4) a protocol for the development of foster care plans; and (5) tools for measuring the level and quality of foster parent involvement. A 4-hour training session was developed to train a group of 4 social workers and 10 foster parents. Also developed were exercises designed to obtain feedback from the social worker and foster parent after the completion of the foster care plan. Post-test results indicate improvements by those participating in the project with over 70% of the parents indicating a high "level" of involvement and 100% indicating a high "quality" of involvement. The appendices contain a statement describing the partnership relationship, a foster care plan format, and various instruments used to measure the level and quality of foster parent involvement. Developing an Active Media Center in a Jewish Day School K-8 through Creative Management.
Singer, Rhona
1992
EDRS Price - MF01/PC07 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEMAY93

The practicum described in this report was designed to create a dynamic, functional media center with an interdisciplinary library skills program for students in kindergarten to grade 8 in a private Jewish day school in a residential neighborhood in a southeast coastal city enrolling 300 students. An additional goal was to use volunteers to organize the library collection. During the 8-month implementation period, the media center was brought to life with mobiles, student art work, murals, and posters. Chess games enlivened recess periods. A library skills game, a personalized library skills workbook, and special displays helped stimulate interest in the media center. More than 2,000 books were added to the collection, including a student-donated paperback collection of more than 500 books. A group of dedicated volunteers helped organize and maintain the collection. Parents visited frequently and utilized the center. A three-year plan was created to help acquire technological equipment. Observation, checklists, quizzes, and questionnaires, as well as frequent statistical counts, were used to determine the increase in the use of the resources. Parents visited frequently and utilized the collection. The report includes tables displaying information about the media center's budget, weekly circulation increases, and volunteer activities. Copies of library skills quizzes, the 3-year plan, and pre- and posttests given to staff and students to determine improvement in library skills are among the items appended. (Contains 35 references.) (Author/KRN)

The goal of this practicum, which was achieved through staff development instructional programs and follow up experiences over a three month period, was to improve the knowledge of elementary school teachers in how to use curriculum related video. TV/video systems and educational programs were utilized to stimulate the critical thinking process of students in interdisciplinary subject areas. Initial and terminal assessments were made to determine if the expected outcomes were met. The teachers' performances and attitudes were reflected in measurement instruments, i.e., a teacher checklist, observation, and weekly circulation reports. The specific objective that was accomplished was that 20 out of 40 teachers at the work setting felt that they could effectively use video equipment and programs as part of their instructional program. Five appendices contain: a form for reporting daily media and equipment circulation; questionnaires designed to determine teachers' attitudes toward using curriculum related video programs and their reactions after using such programs; and questionnaires eliciting information on the teachers' perceptions of the usefulness of videos and their assessment of the inservice course. Six tables display the findings of this study. (Contains 17 references.) (ALF)

Teaching Enrichment Strategies to Limited English Proficient Students in Elementary Grades.
Jun 1992
58p.; Educational Specialist Practicum. Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEMAY93

A study investigated the effectiveness of enrichment activities in developing the language proficiency, comprehension, and critical thinking skills of limited-English-proficient (LEP) children. Subjects were 19 LEP students (out of an original group of 21) in kindergarten through grade 5, who participated in enrichment activities including cooking, field trips, arts, computer activities, and cooperative group projects, all related to fish and pond life. Subjects participated in 30-minute sessions held twice a week over a period of 10 weeks. At the end of the treatment period, posttest scores in oral English, proficiency and critical

thinking skills were compared with pretest scores. The great majority of the subjects gained at least a 25% raw score increase in verbal language and a 25% increase in class participation as determined by teacher observation. All felt increased self-esteem and all increased critical thinking skills, using the Ideal Oral Language Proficiency Test and the Woodcock Johnson test for measuring critical thinking skills. It is concluded that such enrichment activities, when coupled with strategies to develop thinking skills, increase LEP student use of English. A 17-item bibliography is included. The LEP student survey form used to elicit information from teachers, student self-evaluation sheet, weekly teacher-researcher conference sheet, and parent permission form are appended. (MSE)

Journal Announcement: RIEMAY93

This practicum was designed to evaluate the needs of clinicians in identifying substance abuse issues in severely emotionally disturbed children and adolescents, and its dynamics in their family histories. This writer designed and administered pre and post questionnaires to both professional and paraprofessional staff members to evaluate attitude and feelings toward substance abusers; organized two group discussions to discuss perceptions of this population and knowledge about them; met with some staff members individually, and proposed psychoeducational needs for groups. Analysis of the data revealed that there was a lack of motivation in pursuing substance abuse histories unless there (cont. next page)

REST COPY AVAILABLE

was a specific referral for that purpose. Clinical information was limited, and there was a realization that more needed to be done to address the needs of this population. Psychoeducational groups were implemented, self-help groups are now seen from a different perspective, and diagnostic protocols are being established. (Contains 34 references.)

 Journal Announcement: RIEMAY93

This practicum addressed the need to provide training and experiences for school psychologists serving preschool children and their families. The practicum involved preparing and presenting inservice training to special education cooperative preschool assessment teams. Inservice training sessions covered: multidisciplinary, interdisciplinary, and transdisciplinary play-based assessment; flexibility of the Battelle Developmental Inventory; using observations in assessments; role of a facilitator and team members; parent participation in assessment; sharing observations and information; labeling; making recommendations; and writing a team evaluation report. Trainers of school psychologists were encouraged to increase courses and experiences available to students who were interested in serving preschool children and their families. Data from individuals attending the inservice training sessions indicated that the sessions were successful in increasing participants' understanding of assessment. (Approximately 50 references.)  Journal Announcement: RIEMAY93

This paper describes a practicum designed to give 12 low-achieving first-grade children more time to improve their communication skills, to promote knowledge development, and to motivate children to become enthusiastic about the reading and writing process. Whole language, creative drama, and different styles of writing were utilized in the classroom to accomplish the practicum outcomes during a 3-month period. Checklists, questionnaires, and surveys were used in collecting data. Data showed that: (1) children chose books when their work was completed; (2) they read orally in groups and independently, and could relate many of their favorite stories because the classroom was encompassed with books; and (3) their writing activities reflected a variety of experiences. (Eight tables of data are included. Five appendixes contain a checklist for basal reader problems, teacher questionnaire, checklist for writing, attitude toward reading survey, and survey questions for teachers.) (Author/SR)

Journal Announcement: RIE0593

The Businesses as On-Site Schools (BOSS) Program was established as a dropout prevention effort combined with employability training for at-risk high school students. The setting was a vocational/educational alternative center in Florida. Businesses were contacted, and verbal intent to provide on-the-job training and an onsite mentor was established. Fifteen students interested in job openings completed the application requirements and interviewed with the business partner. Once matched with a business partner, the student, researcher, and mentor began to look at possible job training skills exclusive to the job site and the development of employability skills. These three participants also coordinated academics and work-related experiences. Students were required to attend academic classes in the mornings to participate in on-the-job training in the afternoon. A formative evaluation was completed 2 weeks after program implementation. The summative evaluation involved calculating students' grade point averages prior to BOSS enrollment and determining entry-level employability skills. Results indicated an improved level of employability skills, significant level of promotion to the next grade level, improved grade point average, awareness of school-to-work relationship, and a self-evaluation of educational achievement and career opportunities. (Appendixes include 26 references, evaluation instruments, position and job description, anecdotal records, and training agreement.) (YLB)

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEAPR93

This practicum paper describes an intervention designed to increase opportunities for children in a day care center and preschool to practice gross motor skills, and to help teachers gain confidence in their ability to foster children's maturation. It was expected that as a result of the intervention, 50 of 70 children would participate in gross motor outdoor play on a daily basis, and that 5 of 7 teachers would plan gross motor experiences and playground activities for children. The 12-week intervention involved: (1) parents increase their sense of empowerment. Expected outcomes

of the intervention were that parents would: (1) increase their knowledge of concepts related to empowerment, such as control and nurturance; (2) experience a shift from an external locus of control; (3) observe an increase in autonomy in their children; and (4) decrease their need to control their children. The intervention consisted of a training session at which information on decision making, control, nurturance, and empowerment was presented. After the session, activity sheets were sent on a weekly basis to parents. These sheets described activities, such as affirming positive feelings and setting goals, that foster the development of a sense of empowerment. The intervention concluded with an interview of the parents. Outcomes were measured by 10-item pre- and post-tests, a checklist of beliefs about external or internal control, an autonomy scale for children, and a survey of attitudes toward children. Results of these measures indicated that none of the four expected outcomes was met. However, parents reported some worthwhile outcomes of the intervention. A 21-item reference list is provided. Appendices include copies of the measures used to assess the results of the intervention and copies of the activity sheets used during the intervention. (BC)

It was expected that as a result of the intervention, 50 of 70 children would participate in gross motor outdoor play on a daily basis, and that 5 of 7 teachers would plan gross motor experiences and playground activities for children. The 12-week intervention involved: (1) (cont. next page)

Improvement and acquisition of playground equipment; (2) provision of gross motor lesson plans and a reference list about gross motor play; (3) an inservice training session on child and gross motor development; (4) teacher meetings with the center director for planning a gross motor curriculum; (5) a newsletter to parents describing the intervention; and (6) teacher meetings to discuss problems and successes in the program. Outcomes were measured by pre- and postintervention teacher surveys and observations of children. Observations indicated that more than 50 children participated in gross motor outdoor activities on a daily basis. All teachers gave an above-average response to survey indicators that measured their perceptions of their own level of training and ability. Twelve appendices include various forms and planning guides used in the intervention and other relevant materials. (BC)

Easing Transitions in a Private Child Care Setting through Workshops, Conferences, and Follow-Up Activities with the Cooperation of Teachers and Parents.

O'Brien, Pamela J.

1992
74p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR93

This practicum report describes an intervention to improve children's experiences of transitions to and from a day care center and from one activity to another throughout the day. Training workshops for parents and staff were held for 32 weeks. The purpose of the training, which included lectures for large groups and meetings for small groups, was to improve the consistency and effectiveness of adult-child interactions during transition times. Evaluations completed by staff and parents identified the 10 children who experienced the greatest adjustment problems during transition times. Pre- and post-intervention ratings of children by parents and staff indicated that the number of proactive behaviors of the 10 selected children increased over the course of the intervention. Parents reported fewer stressful incidents with their children after the training than before the training. Staff reported a greater use of strategies to help children adjust to transitions after the intervention than before the intervention. A reference list of 71 items is provided.

Appendices include pre- and postintervention rating scales for parents and staff, a description of a school policy on children's separation from their parents, a list of strategies to help children adjust to transitions, and a list of 65 references concerning transition times in children's lives. (BC)

ED352168 PS020959 Infusing Critical Thinking Skills in a School-Age Child Care Program through Specific Staff Planning.

Goore, Selma
1992
68p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR93

An attempt was made to increase selected aspects of critical thinking skills of children in a school-age child care program through staff planning of specific program activities using typical activities that would normally occur in these programs. Increased staff members' awareness of their role in facilitating the development of children's critical thinking skills was expected. Three staff members at a site that served a maximum of 45 children daily were trained to use a problem-solving techniques to implement their daily program, to model problem-solving behavior and the vocabulary of thinking for the children, to structure activities to develop an understanding of the difference between fact and opinion, and to plan opportunities for the children to use a problem-solving approach. By the end of the practicum, monthly programs planned jointly by staff had been implemented. Children showed an increased ability to generate statements of fact and opinion after viewing children's literature and television advertisements, and they used a problem-solving approach to make decisions about their daily program. Fewer children than expected used the vocabulary of thinking, possibly because many were too young for the terminology. These outcomes indicate that it is possible to infuse critical thinking skills into the daily activities of a school-age child. (cont. next page)

child care program through staff planning. Three tables present study findings. Seven appendixes contain a staff survey; monthly plans before, during, and after the intervention; and observation forms for data collection.

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEAPR93

An effort was made to expand parents' comprehension of developmentally appropriate programs through increased understanding of teacher observational techniques in the early childhood classroom and teacher anecdotal reporting in family conferences. Corollary aims were to increase knowledge of children's learning styles to enable better school choices, and to encourage parent attendance at educational decision-making workshops. The setting was a racially mixed inner-city preschool demonstration program of 135 children in a large Northeast urban school system. Six workshops were held to introduce developmentally appropriate programs and improve teacher observational techniques and reporting mechanisms. Partnerships involving parents, the coordinator, the director, and the practicum writer and team were established, and operated as an information resource and line of exchange. The practicum demonstrated that: (1) parent training should be held together with teacher training whenever possible; (2) better informed parents make for better school choices for children; (3) parent-teacher conferences need supportive and well-understood processes and mechanisms for success; and (4) average parents are interested in managing the learning activities and choices of their children. Two figures and six tables illustrate aspects of early childhood education. Eight appendixes contain supplemental information about the inservice program and workshops, including the observations with checklist, a sample questionnaire, and communications with parents. Forty-six references are included. (SLD)

This practicum report describes an intervention to increase teachers' skill and confidence in the use of classroom observation techniques in a school serving children from kindergarten through second grade. Goals of the intervention were that teachers would: (1) recognize six types of observation; (2) implement at least one change in their classroom; (3) implement based on the results of their observations; and (4) increase their confidence in making observations. The intervention consisted of five inservice training sessions at which six observation techniques were studied. The techniques were checklists, event samples, anecdotal records, running records, time samples, and informal interviews. During the course of the intervention, teachers practiced the use of checklists, event samples, and anecdotal records. The results of pre- and post-intervention questionnaires indicated that teachers recognized each of the six types of classroom observation technique; reported that they would make one or more changes in their classroom as a result of their observations; and reported that they felt prepared for, comfortable with, and confident in their use of checklists, anecdotal records, and event samples. A 33-item reference list is provided. Appendices include copies of the questionnaire and surveys for teachers, lesson plans for the five inservice sessions, and materials for teachers' use during the intervention. (BC)

This practicum was designed to improve a high school education media center through systematic collective action. The goal was to improve delivery of education media services by: (1) improving material conditions; (2) developing collaboration between education media specialists and academic teachers; and (3) involvement of the entire learning community in employing research to shape the effort by which the media services could be brought up to standards. Activities included writing and distributing a newsletter; systematically monitoring progress on meeting accreditation standards; starting Friends of the Library and Young Adult Literature groups; developing a program of student media tutors to work with peers; seeking private funding for needed improvements; and developing a long range plan. Results included the creation a multimedia room; funding for an online satellite disc; funding of a feasibility study to generate more media space; improvements in print, nonprint, and microfiche materials; acquisition of an Infotrac unit, three microcomputers, and a laser disc in the media center; a complete reorganization of the media administrative structure; and an increase in the number of users. ED352043 IR054265 Systematic Collective Action To Improve Media Services in a High School Library.
392

This practicum, which sought to improve parents' involvement in the development of educational goals for their children with disabilities, had three objectives: improved attendance by parents at Individual Education Plan (IEP) conferences, increased parent participation in the decision-making process during IEP development, and enhanced parent perception of their importance in assuming roles as equal partners with members of the multidisciplinary team during IEP development. Six components comprised the program: teacher inservice sessions in communication and conferencing techniques, parent/professional workshops to facilitate the acquisition of parent knowledge, establishment of an oral and written communication network to provide information and assistance to parents, networking with parents and various relevant advisory committees, parent involvement in their children's classrooms and involvement of all shareholders including the students. The practicum found that parents are willing participants in the IEP process when they have a clear definition of their roles, rights, and responsibilities; the full intent of Public Law 94-142 can be realized by effective parent participation in the IEP process; and parent self-esteem is greatly enhanced when quality programs are available to address their needs. Appendices contain a teacher questionnaire, parent questionnaire, and teacher observation form. (Contains 37 references.) (JDD)

This practicum report addressed the problem of role ambiguity in regard to effective utilization of special education staff within the regular fourth grade classroom and the need for support for the regular teacher working with special education students. The researcher, a special education educator, conducted the following activities: (1) presented an inservice training to staff on integration strategies. (2)

modeled desired strategies during a 2-week mini-unit in social studies, (3) collaborated in providing shared instruction in a math unit, and (4) switched roles with a regular educator for two full consecutive days. Outcomes included: teachers increased acceptance and understanding of integration as evidenced by pre-intervention and post-intervention surveys; a decrease in the numbers of questions about integration posed by staff and an increase in the numbers of positive comments; the targeting of specific areas for improvement as a result of staff discussions; and improved perceptions of support by the regular class teachers. Appendices include the integration assessment surveys and results, a teacher questionnaire, and a model for effective utilization of special education staff in the regular classroom. (Contains 31 references.) (DB)

ED351825 EC301652 1:ERIC
Journal Announcement: RIEAPR93
This practicum involved the development and implementation of a multimodal inservice program for six elementary classroom teachers (representing each grade level) who indicated high frustration levels due to lack of significant knowledge of Attention Deficit Disorders (ADD). The 12-week inservice included lectures, guest speakers, audiotapes and videotapes, role plays, and group discussions. Program evaluation was conducted by means of pre- and post-implementation surveys, pre- and post-ADD inservice test scores, and a pre- and post-teacher attitude survey. Evaluation results supported the use of systematic instruction and collaboration in an inservice training to improve teacher effectiveness in working with ADD students. Nine appendices include: the teacher biological data; and results; the test about ADD; teacher biological data; (cont. next page)

and a sample "Individualized Education Plan" used with a targeted student during the inservice period. (Contains 19 references.) (DB)

Descriptors: *Attention Deficit Disorders; Classroom Techniques; Elemental Education; *Inservice Teacher Education ; Knowledge Level; *Mainstreaming; Program Evaluation; Teacher Attitudes; *Teacher Effectiveness; *Teaching Methods

ED351812 EC301623 Improving Child/Caregiver Relationships of Prenatally Substance-Exposed Children Birth to Three with Early Development Instructors. Klingler, Susan S.
16 Sep 1992

141P.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC06 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (60)

Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR93
This practicum focused on the improvement of parent/caregiver relationships with approximately 65 children (ages birth through age 3) prenatally exposed to drugs or alcohol. The project utilized six Infant Development Instructors and local health support services. The 8-month program implementation involved Infant Development Instructor training, dissemination of information regarding available services to caregivers, pre-assessment and post-assessment of child/caregiver involvement, and implementation of a caregiver support group. Results indicated increased access by caregivers to more services; observed improvement in 3 of 11 desirable behaviors; and substantial improvement in the amount, quality, and appropriateness of these behaviors. The Infant Development Instructors showed substantial improvement in attitude, and caregiver attendance at the two support group locations remained consistent throughout the 8-month period. Extensive appendices include documentation of increased numbers of substance-exposed infants; the attitude survey of Infant Development Instructors; the parent/caregiver questionnaire on local available services; suggestions for Infant Development Instructors' home visitations; an infant developmental intake checklist; a list of curriculum model programs; and an agency referral guide. (Contains 55 references.) (DB)

ED351811 EC301622 Developing and Implementing an Inservice Program Designed To Change Teacher Attitudes toward Mainstreamed Learning Disabled Students at the Secondary Level. Thompson, Josephine T.
10 Sep 1992
88P.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: Florida
Journal Announcement: RIEAPR93
Target Audience: Practitioners
This practicum involved the development of an 8-month inservice training program to give teachers (N=71) at a rural high school basic information concerning the mainstreaming of students with learning disabilities (LD) as well as to influence their attitudes toward inclusion of such students in their classes. Initially, teachers were confused about the LD, EH (emotionally handicapped), and EMH (educable mentally handicapped) classifications. They had little understanding of requirements of Public Law 94-142 (the Education for All Handicapped Children Act). Individual education plans, classroom modifications allowed to special needs students, nor their legal responsibilities. Teachers expressed feelings of inadequacy about teaching students with learning disabilities. The inservice plan was designed to be spread over time, using parts of regular faculty meetings as well as mailbox handouts and contests. Results were positive, with gains in basic knowledge ranging from 40 to 80 percent. Positive attitude changes were also documented. The participating teachers also evaluated the inservice training very positively. Appendices include the survey of teacher attitudes and knowledge, a survey of LD students' current level of modifications, sample mailbox handouts, and the inservice evaluation form. (Contains 100 references.) (DB)

Target Audience: Researchers
 This practicum was designed to incorporate critical thinking skills instruction and practice into a fourth-grade curriculum to increase fourth-grade students' ability to recognize and apply critical thinking strategies to appropriate situations. This program concentrated on the increasing of six critical thinking skills: classification, sequence identification, inference, analogies, deductive reasoning, and math problem solving. A series of multi-objective worksheets were developed to provide practice in each skill on a daily basis. The problem solving workbook, a supplement to the basal mathematics text, provided daily problem solving activities. Pre- and post-tests for both critical thinking skills and mathematics problem solving and pre- and post-checklists were administered. Analysis of the data revealed that the students improved in both critical thinking skills and mathematics problem solving. The students achieved the objective for critical thinking skills, but did not achieve the mathematics problem solving skill. (Author/DB)

Journal Announcement: RIEAPR93

A practicum was designed to provide opportunities for second-grade students from low socioeconomic school communities to use computer technology in the writing process. Staff development training was designed and conducted to increase teachers' knowledge, experience, and attitudes toward using the computer as a tool for writing. Providing collaboration and support for teachers was a major component of the practicum. Six solution strategies focusing on empowering teachers with knowledge and support in process writing were developed, thereby increasing the use of the computer for student writing. Analysis of the data revealed that providing educators with the tools, training, and support increased student opportunities to use the computer as a tool for writing. (Two tables and one figure of data are included; a list of 29 references, a reading attitude survey, a software evaluation, a computer staff development evaluation, a learning log sample, and a computer activity sample are attached.) (Author/RS)

Descriptors: Access to Education; *Computer Uses in Education; Grade 2; *Inservice Teacher Education; Primary Education; Socioeconomic Status; *Word Processing; *Writing Attitudes

 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEAPR93

This practicum was designed to increase the involvement of parents in the music education of fourth and fifth grade students. A delivery system was developed to provide parents with activities, resources, and materials relating to the student's music education. Parents received the materials at no cost. The author developed a brochure and monthly newsletter; recorded an audio cassette and video cassette to encourage musical activity in the family; administered a postsurvey to all participants; and prepared handbook of musical resources for the child and parent. Analysis of the data revealed that the participants were more apt to involve themselves in their child's musical experiences when given (cont. next page)

Information and materials. All parents involved in the project rated the project as beneficial to their children and conveyed the belief that parental involvement in a child's music education is important. (Author)

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEMAR93

This practicum was designed to incorporate the study of geography into a ninth grade world history class with the aim of improving student awareness of the influence of geography upon the historical development of ancient Mesopotamia and ancient Egypt. By means of a questionnaire and map tests it was determined that ninth grade world history students had little awareness of geography upon historical development in ancient Mesopotamia and ancient Egypt, and could not locate those places regarded as being historically significant in either of those two ancient civilizations. During the course of implementation, students became acquainted with how to read maps, locate important sites, and describe how geographic features factor into determining the location of those sites. Furthermore, through the preparation of both oral and written presentations, particularly the creation of a mythological country, students applied what they learned. Analysis of post-test data indicated that, as a result of all the exercises connected with implementing this practicum, students came away with an adequate grasp of those rather consistent geographic variables which influence historical development. Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR93
This practicum report describes the implementation of a pilot program that used packets of learning materials to incorporate individualized instruction into a traditional curriculum in a kindergarten classroom. Objectives of the program were that 80 percent of students would demonstrate improvement in basic readiness skills, and that 90 percent of parents would consider the activity packets as appropriate and interesting for their child, and would see an improvement in their child's critical thinking skills. The program was implemented over the course of a school year and involved the use of packets of materials that provided learning activities. Packets were designed according to individual students' abilities. Students took home a packet each week, returned it the following week, and described to the class or teacher what they had learned from the packet. Results indicated that all students improved in basic readiness skills as measured by pre- and post-test screening assessments. According to responses to program evaluation forms, more than 80 percent of parents considered the packets appropriate and interesting for their child and saw an improvement in their child's thinking skills. A reference list of more than 250 citations is provided. A collection of 27 appendices presents materials that were used in, or were relevant to, the program. (BC)

Journal Announcement: RIEMAR93

This practicum report describes a 12-week intervention designed to help parent volunteers in six kindergarten classrooms better perform their volunteer work, which included such tasks as grading papers, decorating bulletin boards, and listening to children read. Objectives of the intervention were that: (1) a total of 90 percent of volunteers would feel better prepared to do volunteer work; (2) a total of 90 percent of teachers would feel that the volunteers were better prepared; and (3) volunteers would use critical thinking skills to devise ways to improve their performance of volunteer duties. The intervention involved a series of in-service training sessions for volunteers; discussions about volunteer issues involving teachers at faculty meetings and parents at meetings of the Parent-Teacher Organization; and individual interviews with teachers and volunteers. Postintervention surveys indicated that there was unanimous support from parents for the program and its benefits, and that teachers felt volunteers were better prepared for their volunteer work as a result of the intervention. Participants in training sessions were able to use critical thinking skills to devise ways of improving their volunteer work. Appendices include copies of teacher and volunteer surveys, and various materials relating to the volunteer program. (BC)

Journal Announcement: RIEMAR93

This practicum report describes a 13-week intervention that facilitated the participation of parents of 16 preschoolers in the instruction of their children. Objectives of the intervention were that: (1) parents and children would participate in take-home projects and workshops; (2) parents and children would increase the amount of time they spent together every week performing developmental, appropriate problem-solving activities; and (3) parents would increase the amount of time they spent in volunteer classroom activities that contained developmentally appropriate materials relating to a particular type of activity. Children were to work on the materials with their parents and return the "parent suitcase" following week. The intervention also involved discussion groups and workshops on developmentally appropriate practices for parents. Results indicated that all parents and children participated in the use of the "parent suitcase." Nearly 70 percent of parents increased the amount of time they spent with their children in developmentally appropriate activities as measured by pre- and postintervention questionnaires. Parents exhibited an increase of 165 percent in classroom volunteer time. Appendices include a copy of the parent questionnaire, copies of communications to parents, checklists relating to the "suitcases," and descriptions of activities contained in the "suitcases." Some materials from the "suitcases" are also attached. (BC)

Descriptors: Check Lists; *Early Intervention; High Risk Students; *Instructional Materials; *Learning Activities; *Parent Participation; Parent School Relationship; *Parent Student Relationship; Parent Workshops; *Preschool Children; Preschool Education; Questionnaires

Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: Canada; British Columbia
Journal Announcement: RIEMARS3
The purpose of this study was to determine the status of the use of computers in the schools within the West Kootenay region of southeastern British Columbia (Canada). Thirty administrators, principals, and senior district librarians, teachers, and school board members were interviewed to determine the computing background of the interviewees and how they were using computers in education. Results indicated that computers are being used quite extensively in the schools: the ratio of

(cont. next page)

computers to students in the school ranged from 1:6 to 1:10; the equipment in use varied; the most common software applications were word processing, spreadsheets, and database and communications applications; computers were in use in all grade levels from kindergarten to grade 12; and CD-ROMs and electronic catalog systems were common in primary, elementary, and secondary school libraries. This report is presented in five sections: (1) Introduction--problem statement, purpose of the study, significance, assumptions, limitations and definitions; (2) Review of the Literature--importance, current status, uses, benefits, and future role of computers in education, and barriers to computer use in education; (3) Research Methodology--problem restatement, population and sample, research design, description of the interview questionnaire, administration and analysis of interviews; (4) Results and Analyses--selection of interviewees, interview process, question summaries, findings, status of computers in West Kootenay schools; and (5) Findings, conclusions and Recommendations. Appendices contain the interview questionnaire and a list of interviewees with background data. (Contains 19 references.) (ALF)

ED350983 IRO15794 Improved Computer Technology Skills for a Middle School Facility through Inservice Training.

May 1992
102p.; Ed.D. Practicum, Nova University.
Byers, Patricia Longwell
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcements: RIEMAR93

This practicum was designed to assist the personnel of a middle school in becoming aware of the potential educational benefits of computers and computer networks (specifically, local area networks, or LANS). An introductory presentation concerning the importance of technology in education was followed by 10 inservice training sessions. The classes met weekly on-site, with cooperative learning used as a teaching strategy. The curriculum was developed with consideration given to state mandates regarding objectives; pre- and post-assessment was administered; and training materials for participants and a grant to a local foundation for teaching stipends was prepared. All practicum objectives were met. Each participant scored 80% or better on the post-assessment. all

hands-on computer activities were completed, and frequency of computer lab usage exceeded expectations. The success of the practicum suggests that the design of the inservice training is an effective strategy. Recommendations and a detailed implementation plan are included. Eight appendices include copies of the questionnaires used for a teacher survey, the test used for the pre/post assessment, a courseware evaluation form, and the Teacher Education Center evaluation form. (Contains 22 references.) (Author/ALF)

Descriptors: Computer Assisted Instruction; *Computer Literacy; Computer Software Evaluation; Cooperative Learning; Course Evaluation; Courseware; *Inservice Teacher Education; Junior High Schools; *Local Area Networks; *Microcomputers; *Middle Schools; Pretests Posttests; School Surveys; Teacher Improvement; Teaching Methods

Geographic Source: U.S.: Massachusetts
Journal Announcements: RIEMAR93

A study was done to determine student attitudes towards their experience in the practicum component of the graduate program at the University of Connecticut School of Social Work (UCONN). The program lasts 2 years and the hypothesis was that students had the same level of satisfaction for both years. A questionnaire was developed and sent to 248 first and second year students. The instrument asked 25 demographic questions, 13 Likert scale questions, and one open-ended question for other comments. Fifty-one percent responded, and of those, 46 percent were first year students and 54 percent were second year students. Analysis of responses indicated the groups were comparable with no significant attitudinal differences toward the field experience. Attitudinal comparisons were also made about supervision and advisement, with no statistically significant differences between the two classes. The questionnaire is appended. (Contains 16 references.) (JB)

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR93
This practicum was designed to integrate a study skills program throughout special education classes in a middle school. The major objectives were to develop a variety of instructional strategies to meet the students' needs in the area of study skills, to foster the teaching of study skills in each subject area by the special education teachers through direct instruction, and to provide specific segments of time for study skills awareness activities in each subject area of the students' core curriculum. The practicum project involved designing and administering a study skills self-assessment inventory to special education students and a staff needs assessment to special education teachers, and sharing with teachers activities that would enhance classroom study skill instruction. Informal meetings were held between the practicum implementor and special education teachers to offer assistance to teachers and to monitor weekly study skill objectives. Results revealed an increase in the amount of time spent in direct instruction of study skills in each of nine special education classrooms. Students' use of a unified assignment book resulted in a significant increase in the number of students completing long-term and short-term assignments both on time and as directed. Seventy percent of the teachers and 60 percent of the students deemed the practicum successful in teaching study skills that resulted in academic progress. Appendices contain a needs assessment survey for teachers, a study skills self-assessment inventory for students, a list of study skills, samples of teachers' lesson plans, and evaluation questionnaires. (Contains approximately 40 references.) (JDD)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR93
Findings of a study that examined the effect of a 13-week inservice program on administrators' awareness of laws governing student searches and seizures are presented in this practicum report. Four school-site administrators participated in the project once a week. Program activities included case analyses, role-playing exercises, and critical-thinking worksheets. Pre- and post-test surveys indicate that participants made significant gains in their knowledge and understanding of laws that regulate student search and seizure. Implications are that school districts must communicate legal information to school-site administrators and develop a district curriculum. Appendices contain a manual that outlines the relevant law regarding student search and seizure, critical-thinking worksheets, and survey findings. (Contains 37 references.) (LMI)

Journal Announcement: RIEMAR93
A practicum was developed to improve process writing skills
(cont. next page)

of seventh grade at-risk students by increasing interest through the use of the microcomputer. Word processing software, and telecommunications technology. Sixteen students wrote a series of eight "basic" hand-written essays as part of the regular language arts class. Students then completed assignments utilizing the microcomputer, word processing software, and printer. They then transmitted the final draft--using phone line, modem, and special software--to a local bulletin board service (BBS) for distribution through a national "preteen" conference network. Students contacted the BBS daily to check for responses. Each student, classroom teacher, and writer participated in weekly "brainstorming" sessions to input new writing ideas, make suggestions, share and respond to writings of other students, and report on messages downloaded from the BBS. Results showed an increase in process writing skills as measured by pre- and post-handwritten and computer written essays utilizing a holistic scoring criteria. Additional analysis of pre- and post-attitudinal surveys; observations by the classroom teacher, group counselor, and author; and evaluation of a daily journal revealed a substantial increase in the number of students with a positive attitude toward writing. (Twenty-eight references are attached. Appendixes include statistical and graphic analysis of process writing skills and attitudes towards writing. Student contract, holistic criteria, lesson plan outline, time line, assignment tracking sheet, and computer software evaluation.) (SR)

ED350592 CS011075 Development of a Study Skills Packet To Improve Grades In Ninth and Tenth Grade Students.
Fountain, Ruth Lee
Jul 1992
137p.; Educational Specialist Practicum, Nova University.
EDRS Price - MF01/PC06 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR93

A practicum developed a program of study skills to improve grades of ninth and tenth grade students in English and mathematics courses. The project contained three basic components: teacher inservices on study skills techniques in time management, reading textbooks, taking class notes, and preparing for and taking tests; student lessons for development of those skills; and quality circle meetings interacting with and responding to the program. Results showed

that students' grade averages in English increased in every course except one; that students' grade averages in mathematics increased in three of five courses; that teachers' positive feelings regarding their ability to assist students toward better grades increased significantly; and that teachers evaluated the managerial style and leadership of the researcher positively. (Five tables of data are included. Seventeen references and eight appendixes--containing teacher attitude survey, leadership survey, calendar and memorandums, and lesson packages on importance of grades, time management, SQ3R, Cornell notetaking, and test taking strategies--are attached.) Journal Announcement: RIEMAR93

A practicum developed a whole language kindergarten at-home reading program. The target group was 27 sets of parents of children in a kindergarten classroom who volunteered to participate. The objectives were to increase the parents' knowledge of whole language techniques; increase their level of comfort in using whole language techniques at home with their children; and increase the parents' ability to judge critically the quality of children's literature books for instructional use. During a 12-week program, parents in the target group were instructed in whole language techniques and given a parent booklet on whole language written by the practicum researcher. Following an orientation session, the parents and their children read quality children's literature books at home together and then used whole language techniques to extend the reading activities. Critical thinking skills were required of the parents as they filled out weekly questionnaires on each of the books used in the program. The success of the project was documented through the evaluation data gathered, including the weekly returns of parent response forms representing an 85% response rate. (A 27-item (cont. next page)

bibliography is attached. Appendixes include parent surveys, survey data, a parent whole language handbook, a book list, a whole language direction sheet, and a parent response form. (SR)

A practicum was designed to increase the instructional options chosen by classroom teachers in order to create meaningful connections between reading and writing for elementary students. Teachers in the target school were experiencing difficulty in translating theory into effective classroom practice. In response to a teacher needs assessment, four key areas of focus were identified and four corresponding workshops specifically geared to teacher grade levels, and references to the textbook series in use, were developed. The workshops were: (1) What is Whole Language? (2) Integrating Reading and Writing; (3) Whole Class Instruction; and (4) Combining Trade Books with the Basal. Practical handouts accompanied each workshop. A list of trade books that related to concepts and themes in their math series was particularly popular. Classroom visitations and individual meetings were arranged, and professional books, articles and video tapes were also made available. Outcomes were positive, with all the practicum goals being met. All teachers demonstrated the use of several new teaching strategies. Central office administrators became interested and involved in the practicum. (Thirty-six references and an appendix containing the teacher survey are attached.) (Author/SR)

This practicum report describes a reading program that was designed and implemented to help improve reading attitudes among fifth grade children. A target group of 17 fifth-graders were unmotivated and uninterested in reading, and TV occupied a great deal of their out-of-class time. Solution strategies involved encouraging parents, teachers, and media specialists to provide interesting reading materials for the children, to model a love for reading, and to read aloud to them. The Accelerated Reader Program was used to motivate students. After reading certain books students took a computerized test and earned points, based on correct answers, which could be cashed in for prizes. Spin-off activities involved students keeping a daily log, read-aloud sessions, poster contests, and daily sustained silent reading periods. Success was measured by comparing a pre- and post-TV survey to determine students' attitudes toward reading, and also by using assessment instruments including students' daily logs, reading goals, media specialists' checkout log, flexible checkout schedule survey, sustained silent reading observation survey, student questionnaires, and student improvement on tests. Results showed no major reduction in students' TV viewing time. However, it was evident from students' enthusiasm for going to the media center to check out books, and their excitement over the Accelerated Reader Program, that attitudes toward reading improved and students did read more. (Six tables of data are included; 20 references and 12 appendices, containing surveys, questionnaires, forms, and data are attached.) (Author/SR)

A practicum was designed to provide kindergarten students from low socioeconomic families with successful home literacy experiences in preparation for early school success. Parent/child literacy training workshops were designed and conducted to increase the awareness and frequency of home literacy activities. Providing regular reading aloud sessions at home and the modeling of adult literacy behaviors by parents were a major focus of the training provided. Eight solution strategies were developed to train and provide low income parents with the knowledge and materials necessary to increase the home literacy experiences of their children. Analysis of the data revealed that parents increased their frequency of reading aloud to their children during an 8-week period, increased the frequency of adult modeling behaviors, and increased their awareness of the importance of reading aloud to their children. (Two tables of data are included; 31 references and 3 appendices--containing the family literacy survey, survey evaluation, and kindergarten/parent journal samples--are attached.) (Author/SR)

A practicum was developed to assist prekindergarten teachers present a whole language approach in their already developmentally appropriate classes. Six teachers from three classrooms serving 63 four- and five-year-old children

participated in on-site training and weekly consultations. The teachers were all experienced paraprofessionals with Child Development Associate (CDA) credentials. The children were admitted to the prekindergarten program based on income eligibility. The teachers attended five 2-hour workshops on how young children learn about reading and writing in a whole language approach classroom. The teachers learned about the use of predictable big books and ways to provide print experiences throughout the room. An attempt was made to involve parents through a meeting on the whole language approach, a book sale, and a lending library. The final checklist of each classroom documents a large increase in print opportunities, teacher encouragement and child participation with print. Although the parent meetings were held and children's books sold, parents did not become active participants in the process. The teachers believe the parents needed more information about the program's parental expectations prior to the program's start. (Twenty-nine references, a list of questions about the whole language project, a checklist for whole language classrooms, the schedule for the teacher workshop, a children's checklist, a letter to parents, and a description of a whole language classroom are attached.) Journal Announcement: RIEMAR93
An intervention program in the area of sixth grade social studies was implemented for the purpose of increasing reading comprehension levels of average ability students in a large urban school district. Five metacognitive strategies were employed to improve understanding of the adopted textbook. The strategies included outlining, sentence summaries, self-interrogation, the KWL strategy (derived from the phrases: "What we know," "What we want to find out," and "What

(cont. next page)

we Learned"), and discourse as a mode of inquiry. Success was measured by comparing pretest and posttest scores. Results indicated improvement in reading comprehension skills as measured by the Qualitative Reading Inventory. Efficient use of metacognitive skills was demonstrated and measured by the Gates-MacGinitie Reading Test. Increased social studies grades were determined by an average score of three unit tests from the social studies text. It was concluded that instruction in the five metacognitive strategies improved the target group's reading comprehension abilities. (Four tables of data are included; 20 references and a proposed timeline for the practicum are attached.) (Author/RS)

Journal Announcement: RIEMAR93

This practicum in an elementary school attempted to provide adaptive strategies to children of alcoholic parents so that they would be able to cope effectively with their family problems. It also attempted to develop self-esteem in these children and to help them to recognize their strengths. Biweekly counseling sessions were designed to teach coping mechanisms and to provide support. Drug and alcohol education was taught to the students and staff. Through games, discussion, poetry, music, and art children learned about feelings, defenses, and choices. The group was limited to 10 to 15 students. Children were encouraged to explore typical teenage problems and ways to overcome them. Parents were invited to get involved. Data was collected before, during, and after the counseling sessions. Outcomes of the practicum were very encouraging. Teachers reported that they had more knowledge of the problem and would seek help for their students. Data showed that students achieved a more positive self-image. Staff made use of substance abuse materials and parental communication increased. The results confirmed that counseling mechanisms could reduce stress for the child raised in an atmosphere of instability and insecurity. (Contains 19 references.) (ABL)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEMAR93

A practicum described a strategy involving the integration of computer software reading games with traditional printed texts to improve student reading scores and attitudes toward reading. A target group of five seventh-grade remedial reading students participated in the study. The two computer software programs, "Super Solvers Midnight Rescue" and "Stickybear Reading Comprehension" were used along with state adopted texts to provide instruction and reinforcement in developing reading comprehension skills. Following teacher- and text-generated instruction, students completed three to four sessions on the computer each week. Although the desired outcomes regarding increased reading levels were not fully reached, there were significant gains made within the target group. Results indicated that the target students developed positive attitudes toward reading and increased reading scores as well. Findings suggest that the integration of computer software reading games with printed instructional materials can be utilized to increase reading scores and to effect positive attitudes toward reading. (Six tables of data are included; 23 references, a parent/student reading log, a structured reading autobiography form, the letter to parents, and brief descriptions of the two software programs are attached.) (RS)

Journal Announcement: RIEMAR93

The aim of a practicum was to integrate language arts and vocational education at the high school level. The following strategies were used: collaboration with vocational teachers; development of cross-curricula activities; reinforcement and evaluation of communication skills in the vocational areas; infusion of occupational relevancy into academics; facilitation of cooperative learning and relevant problem solving; and staff, counselor, and administrator orientation. Two corollary aims were to increase students' communication skills as measured by the State Scholastic Aptitude Test (SAT) Part I, and to reduce the dropout rate. Targeted subjects were 100 high school seniors enrolled in 2 Basic Skills English classes and 60 sophomores and juniors enrolled in 3 English II classes. A comprehensive integration plan was designed in which solution strategies were implemented and incorporated into normal class schedules over 35 weeks. Results were positive; objectives were met. Data (teacher and student surveys) revealed the following: (1) teacher collaboration, cross-curricular activities, and applied communication skills could increase integration; (2) students' communication skills increased 5 percent as measured by the SSAT; and (3) the dropout rate was reduced compared to nonpracticum English students. (Appendices include 57 references; English curricula; surveys and results; memos to teachers; and teacher/administrator and parent orientation materials.) (YLB)

 Journal Announcement: RIEMAR93

A program was conducted to improve the quality of food service through the training of 44 food and nutrition service employees in a 200-bed hospital. A 12-week quality control program was implemented to address four key areas: food temperatures, food accuracy, food quality, and dietary personnel. Learning strategies, emphasizing critical thinking skills, included the following: inservice education with preestablished learning objectives, reports compiled to check tray-menu-temperature accuracy, and a 10-question evaluative essay in order to determine the target group's knowledge base before and after the 12-week implementation phase. The results indicated increased levels of awareness for the target group as compared with essay results prior to implementation. The study concluded that the established quality control program can improve employees' knowledge and awareness but does not guarantee target group compliance if departmental supervision does not enforce the program. (Appendixes, more than half the document, include the following: evaluative essay; patient tray accuracy and appearance report; retherm area process; tray assembly; menu monitor; quality patient service; dress code; modifying menus for calories, carbohydrates, fat, cholesterol, sodium, potassium, protein, and fluid restrictions; menu substitution; and nonselect menu rotation. There are nine references. (Author/KC)

This practicum was designed to facilitate the professional growth and personal well-being of beginning teachers during the induction year. The program provided novice teachers with (cont. next page)

opportunities for regular contact with an experienced teacher, encouraged demonstration of positive self-perceptions as professionals, and assisted in the development of effective teaching strategies. A clinical support teacher provided resource materials monthly, contacted the novice at regular intervals, provided demonstration lessons and information on alternative instructional strategies or management techniques, observed and conferred, and shared information on opportunities for professional development or relevant literature. Surveys were administered upon completion of the program. The novice teachers involved expressed positive perceptions about their competence and profession, indicated an intention to remain in the teaching profession, and demonstrated effective teaching strategies along with an increased strategies repertoire. Data further indicated that novice teachers found the program very helpful and recommended its continuation. Copies of a teacher self-evaluation survey and an assessment instrument are appended. (LL)

Journal Announcement: RIEFEB93

This practicum report describes an intervention to teach preschool children to resist gender bias. The stated intervention objectives were as follows: (1) children will exhibit a 20 percent reduction in gender-stereotyped behaviors as measured by experimenter observation; (2) at least 20 percent of children will demonstrate an understanding of counterstereotypical knowledge as measured by the Sex Role Learning Index; (3) after 3 months, 50 percent of children will demonstrate a reduction in sex role stereotyping of play items as measured by the Sex-Typed Picture Test; (4) parents will increase their knowledge about eliminating sex role stereotyping as measured by a parent survey; (5) children will correctly use the word "stereotype" in conversation; and (6) children will exhibit an ability to resist gender bias as measured by experimenter observation. The intervention

consisted of three components. Parents attended meetings at which issues relevant to sex role stereotyping were examined. In 12 weekly sessions with the children, the experimenter discussed issues and conducted activities concerning sex stereotyping. Throughout the intervention, the classroom teacher provided children with books, songs, and role playing opportunities that addressed issues of sex stereotyping. Results indicated that the objectives were met. A 42-item reference list, and a 13-item bibliography of books for children and adults, are provided. Appendices include questionnaires, measurement instruments, and related items. (BC)

ED350097 PS020752 Restructuring a Kindergarten Classroom To Include More Developmentally Appropriate Activities.
Sherman, Gwen
1992

80p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEFEB93

This practicum report describes an intervention during the 1990-1991 school year that involved restructuring a kindergarten classroom to include more developmentally appropriate activities. Expected outcomes were stated in the following terms: (1) the arrangement of the classroom will allow free, orderly movement; (2) the county's kindergarten curriculum will be incorporated into classroom activities; (3) the classroom will provide opportunities for active learning and will require fewer paper and pencil tasks; and (4) the number of discipline referrals of kindergarten children will decrease. The intervention involved rearranging the classroom into learning centers; color coding the centers; devising a management system for using the centers; and developing games and activities that correlated with the county's kindergarten curriculum. The success of the intervention was measured by comparing pre- and post-intervention teacher surveys and experimenter observational checklists on developmental 111 appropriate classroom practices, and by comparing the number of discipline referrals during the intervention year as against the previous year. Results indicated that the objectives were met. A reference list of 40 items is provided. (cont. next page)

Journal Announcement: RIEFFB93

This practicum report describes an intervention to teach critical thinking skills in two courses in a community college early childhood education program. The objectives of the intervention were to ensure that: (1) students will become aware of critical thinking skills; (2) students will show an increase in their use of critical thinking skills in their written work; (3) students will show an increase in their use of critical thinking skills in class discussion; (4) students will use critical thinking skills as a rationale for decisions about preschool children; and (5) instructors will be aware of an increased use of critical thinking skills by their students. The intervention included a revision of classroom questioning, discussion, and quiz techniques; classroom presentations that modeled critical thinking and decision making skills; and students' journal writing and quiz writing. The objectives were measured by instructor logs, student journals, student work portfolios, student papers, and pre- and post-intervention scores on creative reasoning and critical thinking tests. Results indicated that the fifth objective was not met, and that the second objective was met by one-third of the students. The other objectives were met. A reference list of 40 items is provided. Various materials used in and pertinent to the intervention are appended. (BC)

ED349743 EC301488
Implementing a Family Centered Program for Physically Impaired/Developmentally Delayed Preschool Children To Bridge the Therapeutic Gap between School and Home.
Kluger, Karen P.
22 May 1992
56p.; Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); RESEARCH REPORT (143)
Geographic Source: U.S.: Florida
Journal Announcement: RIEFFB93
Target Audience: Practitioners
This practicum addresses the problem of limited interaction between physical therapists and families of developmentally delayed/physically impaired preschool-age children. A program

was developed in which the physical therapist was videotaped handling and exercising a child, while explaining the purpose of the movements and instructing the parent on how to perform the particular therapeutic exercises. At weekly home visits, the videotape was shown to the parent, and the parent was videotaped performing the prescribed exercises. The videotape was then shown to the therapist for evaluation. Results indicated that with step-by-step instruction by a licensed physical therapist, and through the use of videotape and a home trainer who has some knowledge of physical therapy, parents of physically impaired/developmentally delayed preschool-age children can successfully implement a prescribed home therapy program and feel more confident when physically handling their child. The response to the project from both staff and parents was very favorable, and incorporation into future agency services was being explored. Appendixes include parent questionnaires, transcripts of interviews with a physical therapist, and a parent participation statement. (11 references) (Author/JDD)

Improving the Screening Process for Identifying Students with High Academic Potential from Minority Populations.
Ratliff, Mary A.
Jui 1992
158p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC07 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.: Florida
Journal Announcement: RIEFFB93
Target Audience: Practitioners
This practicum was designed to improve screening procedures for identifying students with high potential, to develop and field test screening instruments, and to increase the number of students with high potential from minority populations referred for further testing. Three screening instruments were developed for use in searching for students with high potential; a faculty workshop and grade-level team meetings were offered; and teachers were given a choice as to which screening instrument they wished to use. Using this approach in 2 schools, 140 additional students from minority populations were identified as students with possible high

(cont. next page)

potential. Teachers participating in the workshop on student screening rated it very positively, and teachers (N=49) and parents (N=38) expressed satisfaction with the selected screening instrument. The practicum results indicate that it is important to allow flexibility for schools to personalize the process of screening for students with high potential, and that empowering individuals who are close to the students is the most effective way of implementing change. The practicum also found that when students in grades 3 and 5 completed the screening checklist themselves, clusters of traits were identified which were specific to White, Hispanic, and Black cultures. Appendixes contain survey forms, survey results, and practicum administration materials. (Contains approximately 70 references.) (JDD)

Descriptors: *Ability Identification; *Academically Gifted; Black Students; Cultural Differences; Elementary Secondary Education; Evaluation Methods; Hispanic Americans; Inservice Teacher Education; *Minority Groups; *Screening Tests; Student Teacher Attitudes; *Test Construction; White Students

ED349725 EC301470 Development of a Parent Support Group for Parents of Learning Disabled Students in a High School Setting.
Purcell, Nancy Mari
21 Jun 1992
87p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEFEB93

Target Audience: Practitioners
This practicum developed a support group for parents of learning-disabled adolescents at the high school level, to explore career opportunities, adolescent behavior, and postsecondary academic settings. The practicum project surveyed parents concerning their interest in a parent support group, formed volunteer parent committees, arranged for guest speakers including a psychologist and a representative from a vocational rehabilitation agency, and organized a College and Career Night. A pamphlet listing area resources for students with learning disabilities was also developed. It is concluded that the parent support group gave parents a safe place to share their fears, hopes, frustrations, and intuitive knowledge with other parents with similar challenges. Appendices contain various practicum administrative materials.. (Contains 19 references.) (JDD)

ED349741 EC301486 Increasing Parent Involvement in the Reevaluation Process of High School Level Special Education Students by Accommodating Scheduled Meeting Times, Valuing Parent Input and Sensitizing Parents and Staff to the Needs and the Rights of Handicapped Students.
Taylor, Larry
8 Jul 1992
65p.; Ed.D. Practicum Report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEFEB93

Target Audience: Practitioners
This practicum addressed educators' concerns that relatively few parents involve themselves in the reevaluation process of high school-level students with mild disabilities. The practicum sought to increase parent involvement in the development of 10 students' academic and career/vocational programs. The practicum involved encouraging parents to attend reevaluation meetings and welcoming parents' input in decision making. Parent training and staff training were conducted to help participants become more sensitive to the needs and rights of all students with disabilities. Analysis of practicum data revealed that students, parents, and teachers generally found the intervention to be helpful in increasing awareness of student rights; that more parents participated in the reevaluation process; and that students, teachers, and parents noted an increased feeling of partnership among themselves. Appendixes contain survey forms and other

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEFEB93

Target Audience: Practitioners

This practicum was designed to assist 62 incoming, at-risk, ninth-grade students to acquire the knowledge, motivation, interest, and skills necessary to make a successful transition to high school. Primary objectives were to reduce the number of disciplinary infractions; decrease school absences; involve more of the students in school-related activities; and increase student awareness of study skills, career education services, and counseling assistance. During the practicum program, groups of eight students met with school personnel during their lunch period, to promote social interaction among the students as well as between students and the program's faculty members. Upper-class volunteers were then assigned as "buddies" to ninth-graders. The upper-class students were to serve as role models while assisting the at-risk students with transitional concerns. Group guidance sessions served as vehicles to define and explore school policies, programs, services, and regulations. Small group counseling sessions and individual counseling sessions were introduced to provide an informal setting to share feelings and explore ideas. Study and examination skills were taught, career exploration sessions were conducted, tutoring assistance was provided, and social activities were organized. The practicum involved teachers, students, counselors, and parents in easing transitional difficulties. Analysis of data revealed that the program was successful in meeting its objectives. Appendices provide a student survey form and records of disciplinary infractions, absences, and school activities involvement. (Contains 27 references.) (JDD)

Journal Announcement: RIEFEB93

Target Audience: Practitioners

This practicum designed and implemented a body image improvement program for seven severely emotionally disturbed latency-aged girls. Students participated once per week for 12 weeks in individual art therapy and in group sessions. The practicum incorporated therapeutic art activities with verbal interactions and utilized human growth films, cooperative learning techniques, and child care personnel from outside agencies. Major issues addressed included cooperation and sharing, health, nutrition and hygiene, puberty and the onset of menstruation, increased body awareness and acceptance, and the acquisition of a more accurate perception of physical self. The individual art therapy sessions allowed for the reinforcement of new concepts and ideas and discussion of questions, concerns, and revelations as they arose. Results suggested that participants developed a greater awareness of the physical and emotional changes associated with puberty, an understanding of proper nutrition for young girls, and an improved perception of the physical self. Appendices contain a body image observation checklist and a sample permission letter to parents. (36 references)

instruction, and serve both rehabilitative and putative functions. Data were collected through a pilot teacher survey; interviews with staff, students, and parents; and document analysis of case referral reports, student records, and teachers' checklists of student behavior. Students who participated in the 4-month program had fewer absences, maintained their grades, and demonstrated greater insight into their behaviors. Although the project was judged to be a success, problems involved increased teacher workloads and an overrepresentation of minority students among those who were suspended. Funding for a part-time teacher/counselor is recommended. A copy of the teacher pilot survey is included in the appendix. (Contains 16 references.) (LMI)

Journal Announcement: RIEFEB93

An 8-month practicum addressed the adverse feelings for writing (shown in responses to a writing survey) of 30 intermediate-level students. Ten students from each grade level (third, fourth, and fifth) with the lowest scores completed the practicum activities. Students viewed a film for the first strategy. The students' reactions to the film served as the basis for a brainstorming activity. One of the concepts was used to develop a story. Students had the option of using one of the concepts that had been generated from the brainstorming activity or coming up with one of their own as they wrote stories. Some stories were written in groups of six, while others were done in pairs. Students had small group conferences to make corrections. Completed work was typed, illustrated, and bound. Completed work was bound by the practicum leader. A visual was used for the second strategy--clustering. The procedure described for

brainstorming was again followed. Freewriting was the final strategy. At the end of the practicum, most of the students had shown improved attitudes toward writing as documented by their responses to the post-writing survey. Those students whose scores remained the same seemed to change their attitude toward one or more areas on the survey. (Five tables and 11 figures of data are included; 24 referents, the questionnaire, the letter to former participants, and a

Improving the verbal scores on the Scholastic Aptitude Test (SAT) of a group of 20 high school Juniors was addressed by the implementation of an SAT coaching program. A computer program, "SAT Success," and a video, "SAT Prep Video," along with practice tests from the Educational Testing Service were employed. Students were self-paced through a 12-week period, reviewing skills and practicing types of questions found on the SAT. Simulated written tests were given throughout the program and a final comparison of the preliminary Scholastic Aptitude Test (PSAT) and the SAT verbal scores were utilized. The results indicated improvement of SAT verbal skills for the target group (only 12 of whom completed more than half of the program) as compared to a group of students in the same school who did not participate in the program. (One table of data is included; 19 references, a student survey on SAT preparation time, and three appendices containing relevant data are attached.) (Author/RS)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEFEB93

The need to decrease the number of students repeatedly receiving after-school detentions was addressed by the implementation of the Peer Assisted Learning (PAL) program. The PAL program is based on the premise that students act out because they desire power. The program gave students power over tutoring situations by having input into planning for themselves and others. The PAL program began with 24 students in grades four through six, although one student withdrew leaving a total of 23 students. Tutoring sessions took place two times per week for a period of 20 minutes. The student tutors met with the researcher and the classroom teacher on alternate Fridays for 20 to 30 minutes. The PAL program was evaluated by a review of the discipline records which indicated a decrease in the number of after-school detentions received by the target group who were classified as behavior problems. Self-esteem in regard to the students' behavior was increased as measured by the Piers-Harris Children's Self-Concept Scale-Revised (1984). Pro-social behavior was also monitored via teacher checklists. Critical thinking skills were utilized in developing lesson plans for each week. Various forms are appended. (ABL)

Geographic Source: U.S.; Florida

Journal Announcement: RIEFEB93

A practicum project was conducted to develop a method to enhance the knowledge base of targeted adult cancer patients entering into a treatment plan that included chemotherapy. The educational component necessary for informed consent by the patient had not been consistent; therefore, a videotape was

developed containing general information common to all drugs used in the treatment of cancer. An addendum was developed and individualized instruction given by an oncology nurse to each of the eight participating patients, providing specific information about individual drugs. Success was measured by completion of an informational survey administered to the targeted population prior to and after the instruction. A further measure was obtained from the completion of the nurse survey sheet by 9 of 12 professional nurses responsible for the patient instruction. Results indicated that patient learning was achieved using the generic tape followed by the nurse-patient interaction. Results also indicated increased job satisfaction for the oncology nurses providing the instruction. (Appendices include results of the nurse survey, the patient questionnaire, and data on information retention using the tape as an adjunct to learning. (Contains 34 references.) (Author/KC)

Journal Announcement: RIEJAN93

The study reported here was conducted to improve student teachers' skills in asking questions capable of eliciting learner responses on a higher cognitive level. Participants, senior student teachers, were chosen randomly for video evaluations of their question asking strategies. Following video recording of lessons, the student teachers performed self-evaluations. Trained observers and college coordinators used an observation form which recognized the levels, types, and techniques of questions that senior student teachers were utilizing; data were collected after each observation; and feedback was provided. Results indicate that subsequent to video evaluation, student teachers' question asking skills improved in the following areas: skill in asking both low- and high-level questions; techniques when asking questions; and abilities to ask questions which would encourage higher level thinking. Appended are: a student teacher's needs assessment (cont. next page)

form (which includes concerns about questioning skills); an observation form; a supervising teacher's questionnaire; and an evaluation checklist. (Author/LL)

Geographic Source: U.S.; Texas
Journal Announcement: RIEJAN93
Document Type: PRACTICUM PAPER (043)

A study was conducted of the physical plant maintenance department (PPMD) of Southwest Texas Junior College (SWTJC), in order to determine if the department was structured as a functional organization, if maintenance control procedures were in place, and if efficient management practices were being used. Consultations with the director of the PPMD and the air conditioning heating technician, as well as an examination of department and personnel records, revealed the following: (1) inadequate control measures for conducting maintenance; (2) an absence of a training program for maintenance personnel; (3) unconfirmed alignment of work positions due to lack of an organization structure chart; and (4) insufficient managerial competencies for personnel in supervisory positions. Subsequently, two organizational charts were created: the first reflected the PPMD's current structure, while the second suggested revisions to the structure designed to improve utilization of human, material, and financial resources. Drawing on a review of the literature, a general maintenance employee training program was developed which included job breakdown sheets, and a key-point checklist. In addition, SWTJC's president established the Long Range Planning Committee for Physical Plant Maintenance and Energy Management to oversee ongoing organizational changes. Appendixes include the training breakdown sheets and checklist, sample employee training record forms, an instructional system model, and 11st of problem solving techniques for the workplace. (MAB)

Development and Implementation of a Grade Level Specific Computer Literacy Curriculum through Teacher Inservice in an Elementary School:
Burmeister, Marsha L.
Apr 1992
95p.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN93
The problem addressed by the practicum was that the computer literacy of teachers and students varied from grade to grade and classroom to classroom, as did the amount of use of the computer. The goal of the practicum was that the participating teachers would improve their knowledge and skills and use the computer for professional and personal purposes. A computer literacy curriculum for grades K through 5 was developed; each level specified vocabulary, knowledge, and skills. Individual teacher inservices were held to enhance teacher computer literacy and to generate a project of the teacher's choice to reflect growth. A faculty workshop focusing on classrooms with access to one computer was also presented. The grade level specific computer literacy curriculum was adopted by the faculty at the school where the practicum was conducted. Analysis of the data from a survey of teachers following the practicum revealed that the participants in the individual inservice sessions were able to use the computer to produce a product and/or explore the use of the computer in a new way. Demonstration of the use of a RF modulator to enable use of a 25" television set as a monitor for whole class lessons led to the purchase and/or placement of this equipment for all the classrooms in the school. Appended materials include the checklists and letters. (Contains 22 references.) (RBM)

An In-Service Training Course Designed To Increase Teachers' Strategies for Working Effectively With Second Language Learners in the Elementary School Mainstream Classroom.
Christina, Barbara

1992
126p.; Ed.D. Practicum Report. Nova University.
Language: English
Document Type: TEACHING GUIDE (052); PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIEUAN93

The practicum reported here was designed for elementary school mainstream teachers experiencing difficulty with the instruction of limited English proficient pupils. It presented teaching strategies intended to involve the LEP pupil as an active and successful participant in the mainstream classroom. The training address the following seven topics: styles of classroom arrangement and management; theories of second language acquisition; strategies for keeping LEP students involved; cultural sensitivity and recognition of differences; minority parent involvement; content area comprehension for second language learners; and the potential for LEP students to be at risk of failure. Training was given by consultants experienced in bilingual and English-as-a-Second-Language education, and focused on practical strategies for classroom use. A survey following the training indicates that participants did acquire new skills for working with the LEP student and family and felt increased confidence in their abilities to improve the education of this population. Appendix materials include the teacher questionnaire, evaluation of the seven component sessions, forms, a press release, a 20-item bibliography, and an outline of the training sessions. (MSE)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEUAN93

The practicum described in this report was designed to make a significant difference in increasing students' language expression by assisting teachers with the appropriate techniques to incorporate effectively the writing process in an integrated language arts curriculum. The target group consisted of 150 fourth-grade students and the 5 fourth-grade teachers. The implementation period lasted 12 weeks and involved the use of critical thinking skills, analysis, synthesis, evaluation, and graphic organizers. Teachers participated in seven 2-hour training sessions designed to assist them in incorporating the writing process into the integrated language arts curriculum. The success of the practicum was based upon the target teachers' required training assignments, performance on the cognitive language arts composition posttest, and the target students' growth in language expression as measured on the Comprehensive Test of Basic Skills and a holistic scoring writing prompt. Results indicated that: (1) the wide variance between language mechanics and language expression scores was narrowed to a one percentile discrepancy; (2) 52% of the students met the criteria for successful language expression; and (3) all of the target teachers increased their knowledge of the writing process and demonstrated effective strategies for writing instruction. (Sixteen references.) The teacher survey, two expository writing prompts, the holistic scoring guide, the teacher pre- and posttest, and the agenda for the teacher training sessions are attached. (cont. next page)

Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.: Florida
 Journal Announcement: RIEJAN93

A practicum was designed to increase third, fourth, and fifth grade gifted and talented students' exposure to the writing process. Nine behavioral objectives were identified: (1) demonstrating more prolifically and mechanically correct narratives; (2) demonstrating more positive feelings toward writing; (3) increasing the number of words used in a narrative; (4) completing a publication-ready narrative; (5) increasing selection of words in a narrative; (6) indicating success in having a written work published; (7) reporting self-improvement in the writing process; (8) increasing ability to inform readers; and (9) demonstrating a desire to write. Developmental writing lessons were designed to help students develop writing skills and to cooperatively share and assist each other in the writing process. Students participated in learning centers, integrated writing skills and viewed educational writing videos. Samples of the students' writing were collected before and after writing projects in portfolios, using a survey and a standard writing scale. All nine objectives were met successfully, and, in many areas, expectations were exceeded. The data from the practicum strongly validated the following: (1) students can improve their writing skills as a result of being exposed to a formalized developmental writing program; (2) students can develop a more cooperative and helping spirit when taught how to assist each other in writing projects; and (3) the use of technologies such as word processing and writing videos can enhance students' writing projects, as was shown in this practicum. In addition, parents, teachers and other students benefitted from the gifted students being involved in the program. (Nine figures are included; 23 references and 7 appendixes are attached.) A practicum addressing the problems of low motivation and

poor writing quality of 50 underachieving 9th-grade basic skill's students is described in this report. The objectives were to increase motivation among the students and to improve the quality of their essay writing. Peer tutoring was used as a method for encouraging students to help each other improve their writing. Students were assigned nine essays to write in a 3-month period. Evaluations were done by fellow classmates, upper classmen, the Senior English teacher, and the Basic Skills teacher. Both conferencing and constructive written criticism were used for correction and improvement. Grading was accomplished by using a holistic scoring chart. Topics were chosen by the teacher in accordance with the state graduation examination so that the students would be well prepared at the time of testing. A plan was developed whereby each student had the opportunity to work with different partners, groups, and students from other classes. A survey assessed the students' attitudes about writing essays. Analysis of the data revealed that the participants' writing improved. Some attitudes about writing were also improved. The data in the practicum showed that self-esteem was enhanced when students worked together, a factor that caused their writing attitudes and abilities to improve. (One table is included; 22 references and 2 appendices--containing the student questionnaire and a list of essay topics--are attached.) (Author/PRA)

The Acquisition of Vocabulary from Reading Stories Aloud.
Fondas, Linda Blondet
Mar 1992
75P.; M.S. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN93
The practicum reported in this document provided an alternative method of teaching vocabulary to students characterized as disabled readers. The method was a naturalistic approach of reading stories aloud to students, combined with guided discussions before, during, and after the reading to develop critical thinking skills. A target group of 11 first graders participated in the program. The overall objective was the acquisition of vocabulary through reading aloud to students. The target group listened to 5 books over a 10-week period. A selected group of vocabulary words unfamiliar to a first grader were used as the test words. Pretests and posttests were administered to measure the extent of new vocabulary the target group acquired from listening to the same story being read several times. The results showed that reading aloud constitutes a major source of incidental vocabulary acquisition, and that teacher explanation of a word meaning and related activities allow a significant amount of vocabulary to be internalized. (Three tables are included; 23 references and 8 appendixes--containing data, pre- and posttests, and selected vocabulary--are attached.)

A practicum addressed the inability of fourth-grade students to successfully solve mathematics word problems due to poor comprehension of and negative attitude toward problem solving. A problem solving improvement program designed primarily around the writing process used in language arts instruction was implemented. The steps of this process include pre-writing, writing, conference, revision, and publication. A student-created mathematics game was an end product of the program. Direct instruction and fun activities on the various properties of word problems, organizing information, determining relevance, and drawing conclusions was also a component of the program. Lessons were designed to be of high interest and fun, helping to create a more positive attitude toward problem solving. Results indicated increased levels of achievement and positive affective changes for the target group of 25 students. (One table of data is included. Appendixes include the pretest and posttest, the word problem attitude survey, and student data. Sample student assignments are attached.) (Author/SR)

(cont. next page)

Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEJAN93

A practicum was designed to assist 30 kindergarten teachers in increasing the authentic reading experiences of kindergarten students in their classrooms. The goal of the practicum was two-fold: to provide the teachers with alternative instructional strategies to drill and practice basic reading skills; and to provide adequate, developmentally appropriate reading materials for the students in the target teachers' classrooms. Survey results, classroom observations, and a review of pertinent literature were used to plan a 19-hour in-service program which was carried out over the school year. Data gathering methods were a student interest and attitude survey, questionnaires, checklists, professional literature, and videotapes on reading strategies. An analysis of the data revealed that the teachers used the knowledge that they gained to select quality children's books and to increase the authentic reading experiences of their students. At the same time, the teachers decreased their use of drill and practice of isolated skills. Monthly sharing sessions, professional literature, funds to purchase children's trade books, classroom observations, and a guest lecturer were rated by the teachers as beneficial aspects of the in-service. (The school system's organizational chart, and eight tables and one figure of data are included; 77 references, the primary classroom literacy assessment inventory, forms for classroom use from the inservice training, and literature recommendations for kindergarten are attached.) aloud to their children. Critical thinking skills were initiated by teaching the parents story structure and by using the computer to write original storybooks. Motivational rewards were included in the form of preparing and enjoying culinary creations of storybook characters and plots. Results were measured by comparative analysis of pre- and post-statistics of a parent diagnostic reading instrument, parent surveys, Portions of the Brigance Inventory of Early Development, and audio, video and journal documentation. The statistical results indicated a positive influence of reading aloud on the child and the parent. Surveys indicated increased book ownership and time spent reading aloud together. (Forty-eight references, and 19 appendices of consent forms, survey instruments, data, and instructional material are attached.) (RS)

ED348643 CS010988 Using Environmental Print Media To Enhance Third Grade Children's Reading and Writing Abilities.
Orenstein, Rhoda

1992 57P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC03 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEJAN93

A course of study to enhance the effectiveness of the traditional third grade reader and workpack as instructional tools was designed for this practicum. The goal was to create a familiarity with the purpose and function of varied print media available within the community, thereby creating a foundation upon which the students (30 third graders) could base their understanding of the settings, themes, and experiences of the traditional third grade reader. The program utilized varied print media and speakers from the students' school and community environment. Classroom cooperative learning centers were established, and a number of group activities and individual assignments were required. Family involvement was encouraged through the broad scope of interactive homework assignments. The program resulted in a heightened sense of achievement, enthusiasm and confidence. The children developed the means of visualizing the printed word. A connection of verbal interaction was developed between school and home. A collaborative setting generated the process

of bringing meaning to the printed word. This group practice allowed students to transfer their verbal visualization strategies to the stories of the traditional third grade reader. The children demonstrated meaningful gains in their abilities to describe the purposes and functions of varied print media. (One table of data is included and 43 references are attached.) This practicum was designed to assist high school seniors who had not made decisions about what they would do after graduation. A series of group and individual guidance experiences was developed to provide students with self-knowledge and knowledge about the options available to them, in order to provide them with the means to develop a plan of action for after high school. A program was developed which consisted of a series of group and individual sessions which incorporated the use of the "Discover" computer-assisted career exploration program and materials taken from the "Discover for High Schools Career Planning Guidebook." After completing the "Discover" program and exercises with a group of high school seniors who were undecided as to their post-high school plans, a series of tours of local training and employment sites were conducted. The tours were accompanied by group sessions in which the information obtained from each tour was incorporated into each student's post-graduation plan. Analysis of the data revealed that all 15 participants in the career decision making group were able to list a specific plan of action for after graduation, including a time frame, and short-term goals, where appropriate. Some students had already taken action to begin their plan prior to graduation. (Author)

ED348522 CEE061743 Improving the Keyboarding Composition Skills of Secondary Business Education Students through a Structured Approach.

Parker, Gay E.
1992 87P.; Ed.D. Practicum report, Nova University.
Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida
Journal Announcement: RIEJANG93

A practicum was designed to improve students' manual keyboarding composition skill. A program was developed to integrate the other requisite skills of well-written composition, accurate punctuation and grammar, and fastidious proofreading in a structured, progressive plan. The 25 students in the Typing I Business Fundamentals class, a keyboarding class with business applications, were in grades 10-12. To develop the manual skill, the students were dictated questions requiring one-letter response, progressing to full-paragraph responses as demonstrated each day in a 5-minute warm-up of journal writing. The students received instruction in the "7's" of writing as applied to business letters; opening, closing, and informational paragraphs; rewriting poorly written letters; and practice in punctuation, grammar, and proofreading techniques. Actual business situations were used along with cooperative teaching techniques and writing games. Pretest and posttest evaluations revealed substantial improvement in written composition, punctuation and grammar, and proofreading. Each student was able to master the manual composition keyboarding skill to the extent of comfortable enjoyment and good content productivity. (Appendices include a list of 26 references, composition pretest/posttest, writing assessment checklist, proofreading pretest/posttest, and grammar and punctuation pretest/posttest.) (Author/YLB)

Field Test of a Preschool, Substance-Abuse-Prevention Curriculum Planned for County-Wide Distribution.

Howze, Kate
1992

167P.; Ed.D. Practicum, Nova University.
EDRS Price - MFO1/PC07 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC92

This practicum report describes the implementation and evaluation of a substance abuse prevention curriculum in a Florida preschool. It was expected that, as a result of the implementation of the curriculum, children would improve in their ability to identify drugs; would increase their self-esteem; and would improve their peer relations. It was also expected that teachers would rate the curriculum as appropriate and easy to implement. Pre- and posttest measures gauged children's responses to pictures of drugs, of faces of children with various emotions, and of children interacting. A survey measured teacher attitudes. The curriculum, which involved interventions over a 1-month period, included presentation of information about drugs and activities designed to enhance children's self-esteem and peer relationships. Results indicated an increase in children's ability to identify drugs and in the number of children who chose a picture of a happy face as indicating their feelings about themselves. Teachers rated the curriculum as appropriate and easy to implement. A list of 21 references is provided. Appendices include a copy of the preschool substance abuse prevention curriculum, the teacher evaluation survey results, and other materials related to the curriculum and the practicum. (BC)

Journal Announcement: RI EDEC92
 In 1992, a study was conducted at the James Kerney Campus (JKC) of Mercer County Community College in New Jersey to develop a placement guide for noncredit remedial courses. Although the majority of students attending JKC required academic skill remediation before enrolling in regular college courses, a placement guide for non-credit remediation had not yet been developed. Course schedules and descriptions, teaching methodologies, and skill tests and cutoff scores for all noncredit remedial programs and courses offered at JKC were collected. These data, along with the results of a literature review, were used to create the placement guide. An ad hoc committee, composed of five counselors and seven remediation instructors, met four times to provide input on the guide's content and design, and to review both the first draft and the final version. The resulting noncredit remedial placement guide included the following components: (1) college mission statement; (2) introduction/statement of purpose; (3) overview/benefits; (4) English as a Second Language, Basic Literacy, and Adult Basic Education/High School Equivalency Preparation (ABE/GED) program descriptions (including placement tests used, initial placement options based on test scores, course titles and schedules, maximum enrollments, teaching methodologies, and advising recommendations); and (5) a list of college and community support services. Appendixes provide Mercer's credit remedial placement chart; the procedures manual for noncredit offerings, for college catalog development, and for counseling services; and the noncredit remedial placement guide. (JMC)

Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RI EDEC92

Target Audience: Practitioners
 This practicum report reports on a project to increase the

number of minority preschool students referred for a gifted program. A teacher checklist was designed to assist in identifying potentially gifted minority students. Training sessions were held (for 28 teachers serving 519 4-year-old students) at preschool centers to increase teacher awareness of both the characteristics of potentially gifted minority students and the need to refer these students at the preschool level. A matrix was developed for the collection of various sources of information (the teacher checklist, a parent checklist, an evaluation of learning and thinking abilities, and a developmental evaluation) about the minority student. Among outcomes were an increase in number of minority students referred, a parent meeting which improved communication between the public school gifted education program and preschool program parents, and modifications of the preschool program. Appendixes include the teacher checklist, the parent checklist, and the matrix. (17 references) (DB)

Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RI EDEC92
 This practicum was designed to increase nurturing relationships between primary caregivers and infants prenatally exposed to cocaine. Goals were to increase the general emotional well-being of the caregivers within the family unit, to increase the interpersonal competence of the caregivers in relation to the care receiving infants, and to increase the caregivers' use of formal social support systems available to them. Through individual and group training sessions, 10 caregivers were actively involved in monthly home and group meetings. The solution strategy was designed to include parent educators who guided caregivers through pertinent stress relieving coping skills derived from strategies and techniques of appropriate parent training during the 1-hour monthly home visitations. The caregivers were encouraged to improve their relationship with the infants by utilizing positive responses through knowledge of normal (cont. next page)

Infant development. Additionally, parent educators and volunteers facilitated monthly group support and parent awareness education sessions designed to increase the access to appropriate community resources. The outcomes of practicum implementation cited increases in many relationship-building behaviors. Parent educators and child protection workers reported that each caregiver demonstrated an increased usage of identified coping behaviors. Post-evaluations indicated that all caregivers improved their relationship with the care receiving infants. Additionally, 3 of the 10 caregivers increased their access from 4 community resource services to 6. 3 others increased their usage from 3 to 5, and the remaining 4 increased their usage of community resource services from a minimum of 2 to a maximum of 7. Through encouragement and understanding, primary caregivers of prenatally substance exposed infants were able to develop nurturing mother and infant bonding relationships. (Author)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIEDEC92

This practicum had six objectives: (1) to increase the training skills of exceptional teachers to enable them to mainstream students more successfully; (2) to increase the number of emotionally handicapped students placed in mainstream classes in elementary and middle schools; (3) to increase the number of mainstream classes attended by the emotionally disabled students; (4) to increase the duration of the placement for the emotionally disabled students; (5) to improve the attitudes of the regular education teacher towards accepting the emotional skills of emotionally disabled students; and (6) to improve the social skills of emotionally disabled students for increased peer acceptance. Strategies included the use of behavior management and social skills training of both regular and special education teachers, social skills training of students, peer tutoring, and an incentive program for both the students and their teachers. Special education teachers consulted with the regular education teachers to assist them with the mainstreaming process and maintenance. Outcomes of the practicum were positive. The level of teacher training skills increased, the regular education teachers' attitudes toward accepting the emotionally disabled students improved, and 22 of 27 students were able to increase the number of mainstream classes they attended. Appendices contain various check lists and forms and a social skills training package which uses "circle time" to teach social skills in a nonthreatening manner. (Approximately 40 references) (JDD)

Geographic Source: U.S.; New York
Journal Announcement: RIEDEC92

This practicum sought to improve the education of six learning-disabled and five at-risk ninth-grade students in English, science, and social studies classes, by implementing a collaborative consultation model which involved having individual teachers work collaboratively with a resource room teacher. Targeted students were given the O'Brien Learning Channel Reference Test. Collaborating teachers completed the Modified Meyers-Briggs Test to determine their teaching style, analyzed learning styles of target students, completed curriculum-based assessments, prioritized the skills needed by students, conducted strategy intervention teaching, reinforced behavioral strategies, learned about and implemented behavioral interventions, and evaluated student progress. The project resulted in improved teaching and learning through analysis of

Journal Announcement: RIEDEC92

Outcomes of a project that implemented a management information system to effectively gather and record student data are presented in this practicum report. The project, implemented in the adult education department of a community college and its various offcampus locations, consisted of three components: a BASIC program to calculate students' time cards; an attendance spreadsheet; and a database to record all data. A manual was also developed and aides were trained to implement the program. Evaluation was based on interviews conducted with the supervisor and administrators; comparison of recorded data; and questionnaires administered to 2 administrators, 38 teachers, and 11 aides. All administrators and aides and all but 16 teachers responded to the survey. The project met five out of eight of its objectives, which included greater assistance in obtaining detailed student information, a reduction in paperwork, the aides' acquisition of a new management information system skill, improved accuracy of student records, and decreased calculation time. Appendices contain the computer project components, a spreadsheet printout, student registration and data forms, a copy of the manual, and the questionnaire with a summary report. **Increasing Prosocial Behavior of Elementary Students in
Grades K-6 through a Conflict Resolution Management Program.**
Satchel, Brenda B.
1992
84p.; Ed.D. Practicum, Nova University
Journal Announcement: RIEDEC92

A practicum was implemented to increase prosocial behavior of students in grades K-6 through a conflict resolution management program. The objectives of the intervention were to: (1) reduce student discipline referrals for antisocial behavior; (2) increase student conflict resolution scores; and (3) increase the prosocial behavior of students. Several activities were utilized to increase the prosocial behavior of students. These activities involved the selection and training of student facilitators who would serve as mediators in conflict situations; teacher inservice designed to give teachers strategies for resolving conflicts within the school setting; implementation of a curriculum to teach conflict resolution within the school setting; presentations at PTA Executive Board, School Improvement/Effective School Team, and School Care Team meetings; monitoring of the progress of students; and implementation of behavior management techniques within the classroom setting. Data used to evaluate the practicum intervention indicated a somewhat positive effect upon increasing the prosocial behavior of elementary students. However, all three objectives were not achieved as outlined by the established criteria. The results indicated that discipline referrals for antisocial behavior were reduced, a majority of the students improved their conflict resolution scores, students felt that they got along well with their peers, and they felt good about school. (Nine tables of data are included; 28 references and 4 appendices of forms--student discipline action summary, a form for student profiles on conflict resolution, an annual school survey, and a weekly log--are attached.) (Author/PRA)

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC92

A practicum aimed to increase global awareness in the first grade classroom. The problem was that the students were very "Americanized," predominantly white, and rarely exposed to other cultures. Therefore, the students could not recognize commonalities among people and could not understand the cultural differences in others. The major goal was to increase global awareness in all five first grade classrooms by advocating the similarities of self and the cultural differences of others using a thematic, integrated approach. Language-experience charts, portfolios, charts, and student journals were used during the implementation phase to document student growth. The results of the practicum were very positive. All four objectives were successfully reached and surpassed the original expectations. The outcome of the project was demonstrated through improved student attitudes, new friendships, and positive behaviors toward other students and among the five first grade teachers. The students are now more aware of their own needs, and the similarities and differences of others. (Three appendixes--teacher interview questions and personal observation/sample statements--and 17 references are attached.) (Author/PRA)

Expanding Writing Opportunities for Elementary School Children and Assisting Teachers' Knowledge of the Writing Process.
Brand, Wendy
Jul 199296p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.Language: English
Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC92

A practicum was designed to place the teaching of writing as a high priority in an elementary school; allow children more opportunities to share their writing; and assist teachers in

their knowledge of teaching writing, especially through the writing process. Children's writing was given high visibility through the use of monthly "young authors" displays, encouragement of classroom and hallway displays, and two editions of a literary magazine. In addition, a publishing center was set up for fourth graders, an after-school writer's club was formed for third and fourth graders, a young author's picnic was held at the end of the year, and a prize-winning teenage author spent half a day in the school giving assemblies and working with students. Teachers were assisted through a district-sponsored graduate course in the teaching of writing plus periodic articles and "idea sheets" that were circulated. Results indicated a higher priority for writing in the school. Teachers saw children's pride when their efforts were displayed and "published" in a literary magazine or in book form. The visiting teenage author was inspiring to both children and adults while the public celebration of the writing efforts was enjoyed by the entire school community. (Four tables of data are included; teachers' needs assessment, questionnaires, a newspaper announcement, announcements and title pages for the literary magazine, and a sample announcement for the writing club are attached.) Geographic Source: U.S.; Florida
Journal Announcement: RIEDEC92
A practicum sought to improve student writing and student attitude towards writing through a performance-based assessment which featured peer and teacher conferencing, holistic grading, and publication of material written by students. The practicum involved seventh and eighth graders and five teachers who instituted all aspects of the writing (cont. next page)

process from prewriting to evaluation. The 12-week writing program encompassed all four types of writing, provided folders for all students, outlined procedures for peer and teacher conferencing, conducted summative evaluations among teachers, enacted a letter-writing project among students, arranged for the collection and sealing of student folders for teacher assessment in the next academic year, and conducted summative evaluation surveys at the conclusion of the program. Analysis of the survey and evaluation of teacher discussions revealed a substantial increase in student participation in writing, as well as an improved attitude by the students about writing. Use of holistic grading procedures brought about a greater awareness by teachers of this type of evaluation and provided a greater spectrum of positive grades from the overall teachers and students participating. Overall, teachers and students generated a more positive outlook about writing in general and of portfolio assessment in particular. (Two tables of data are included: four appendices--the Teacher and Student Surveys on Writing, the Teacher Summative Evaluation of Program, and the Post Project Student Survey--are attached.) CS1213455 Improving Students' Expertise and Attitudes during the Postwriting Stage of the Writing Process through Collaborative Revision.
Weils, Mary C.
May 1992
62p.; M.S. Practicum, Nova University.
Journal Announcement: RIEDEC92
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Language: English

A practical addressed the problem of students' lack of fluency in standard English despite the traditional paradigm for formal grammar instruction and the emphasis on process writing in most English classrooms. Nineteen (English 2) high school students participated in peer editing groups in a collaborative learning environment. The solution strategy was: (1) to group students of varying fluency levels into editing teams; (2) to monitor errors and revisions via editing checklists; (3) to provide instruction on an as-needed basis; (4) to motivate students to teach and learn from each other; (5) to stimulate the critical thinking necessary for effective editing and proofreading; and (6) to improve attitudes concerning the need for consistent and accurate revision of

writing drafts in the context of students' writing. After implementation of the collaborative revision plan, the target group demonstrated increased levels of fluency in postwriting skills. The results also demonstrated increased positivism toward the efficacy of learning and applying the conventions of standard English to students' writing. Conclusively, students benefitted from the strategy of peer collaboration and relevant grammar instruction provided in the context of students' writing. (Eight appendixes--surveys, monitoring and testing instruments and student data--and 20 references are attached.) (Author/PRA)

Language: English
Document Type: PRACTICUM PAPER (043); TEST; QUESTIONNAIRE

(160)
Geographic Source: U.S.; Florida
Journal Announcement: RIEDEC92
A reading comprehension program was developed and implemented that addressed the needs of sixth-grade students. The program focused on critical thinking skills using a teamwork approach. Each heterogeneous small group used a checklist composed of before, during, and after reading questions and activities. At the conclusion of the 12-week intervention, students were surveyed on opinions on solving problems, and given posttests on following directions and solving math story problems. Results indicated improved levels of reading comprehension skills in the target group of 30 students. There was a significant increase in critical thinking skills and written communication skills. Greater cooperation among students was observed. Findings suggest that the Reading Strategy Checklist can be used as a cooperative learning program to increase reading comprehension, develop critical thinking skills, improve written communication skills, and enhance whole class discussions. (The Reading Strategies Checklist, a survey instrument, following directions tests, and problem solving tests are attached.)

Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEDEC92

A practicum addressed the problem of poor reading comprehension of average ability third graders in a southeastern U.S. elementary school. The target group consisted of 24 third-grade students from a low socio-economic background. The reading program was initiated to improve reading comprehension skills. The average test score on the basal reading unit test for the group was 74.3%. The strategies for improving comprehension included: group-assisted reading, corrective feedback, emphasis on critical thinking skills, and the Generative Reciprocal Inference Procedure. The target group was tested for performance by the Qualitative Reading Inventory (QRI), the third-grade basal reading unit test, and the critical thinking checklist. Half the group made gains of at least 10% on the QRI. 9.1% scored an increase of at least 21% on the basal reading unit exam, and 5.1% of the group was given higher ratings by their classroom teacher as measured by the critical thinking checklist. The program's success was attributed to consistent review of the subject, higher level questioning techniques, and praising the students for their accomplishments. (One table of data is included: 16 references, a 21-item bibliography, and a critical thinking checklist for the classroom teacher are attached.) (RS)

 Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEDEC92

The purpose of this practicum was to broaden and strengthen the classroom assessment of literacy development in a third grade. Goals were to implement authentic assessment techniques, to involve both students and parents in goal setting and ongoing evaluation processes, and to develop writing portfolios exhibiting a wide range of student performance. A staff survey was administered comparing standardized tests to course content being implemented; a survey was conducted among third grade parents to ascertain their preferences for report cards or conferences, as well as their evaluation of the effectiveness of conferences; frequent conferences were held with parents to set goals for, and report progress on, student achievement; scaffold conferences were implemented with individual students on a regular basis to review goals and progress; steps in the writing process were modeled; a variety of authentic assessments were implemented, including the portfolio and observational approaches; and several portfolio workshops and alternative assessment presentations were given at district, county, and state levels. Results of the practicum were positive. Analysis of data revealed that the authentic assessment methods monitored through scaffold conferences taught students to assume increased responsibility for their own learning programs. More frequent conferences between parents and teacher, plus the implementation of a criteria based report card, created more meaningful dialogue about the educational program and individual student progress. (Two tables of data and two figures are included. Nine appendixes containing surveys, a teacher scoring sheet and checklist, report card criteria, and parent suggestions-and 44 references are attached.) (Author/SR)

Improving Intermediate Grade Level English-as-a-Second-Language Students' Attitudes toward Recreational Reading.

Kaminsky, Debra E.

1992

34p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC02 Plus Postage.

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC92

A practicum aimed to improve the attitudes toward recreational reading of 12 intermediate grade level English-as-a-Second-Language (ESL) students so that they would share their enthusiasm and interests in pleasure reading, as well as devote more time to reading. The writer met with parents of ESL students to discuss ways they could encourage recreational reading and school success; scheduled time for recreational reading in the classroom; developed students' interest in newspapers; encouraged students to write, edit, and read their own news of current events using a microphone; had students write their own books; and prepared a grant so that recreational reading materials would be available to the students. Results indicate that the practicum, carried out in a large city in the midwest, was very successful. Students chose recreational reading when given an option of self-selected reading or other activities. They were able to discuss what they had read and found it less difficult to read for pleasure. (An appendix contains the student questionnaire.) (SR)

CSO10979 Expanding Prospective Teachers' Beliefs about the Reading Process To Enable Changes in Classroom Practice through the Use of Whole Language.
Levin, Jill
1992

92p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English

Document Type: RESEARCH REPORT (143); PRACTICUM PAPER (043)

Geographic Source: U.S.; Florida

Journal Announcement: RIEDEC92

A practicum designed to help prospective teachers explore instructional approaches that differ from their intrinsic beliefs about how reading should be taught is described in this report. Particular emphasis was placed on using the whole language approach, as opposed to the more traditional basal

reader or skills oriented approaches to reading. All student participants were placed in kindergarten, first, second, or third grade classrooms for implementation of pre- and post-surveys of teacher beliefs as related to classroom practices; (2) development of a pre- and post-questionnaire of whole language terminology; (3) requiring students to use literature-based lessons in their classrooms; (4) creation of teacher-made materials; (5) introduction of cooperative learning; (6) utilization of big books, dictated stories, and experience charts; (7) observation of students in field placements; and (8) organization of several oral presentations as a means of sharing ideas. Analysis of the data revealed that student participants used more holistic strategies in their classrooms and exhibited enthusiasm and inquisitiveness about whole language and its potential effectiveness. Post-survey results indicated that prospective teachers changed their attitudes toward the whole language approach and were more willing to reflect on how changes in classroom practice can be developed to meet the needs of beginning readers. (Two figures of data are included: (E.g., references, student questionnaires, a fieldwork observation-report form, an introductory and follow-up letter to cooperating teachers, a mid-semester evaluation form, and the lesson plan format are attached.) ED347464 CG024394 Improving Positive Experiences for Middle School Minority Students Entering a Suburban Community through Intervention Programs Involving Staff, Parents, and Students.
Piscitelli, Christine D.
1992

142p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC06 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; New Jersey
Journal Announcement: RIEDEC92
This practicum was designed to increase the positive experiences of middle school minority students entering a suburban community. The problem for racial and ethnic minorities is how to have full access to and participation in the educational life of the community without surrendering their language and cultural distinctiveness. The goals of this practicum were to enable approximately 230 minority students (cont. next page)

and their parents to have positive school experiences as well as when they were interacting with classroom teachers as well as when they were engaged in other school activities. A holistic program was designed which consisted of a series of interventions involving students, teachers, parents, and administrators. These interventions included inservice programs and monthly communiques with parents and assistance programs for students. The results of the program were positive. The goals and objectives of the practicum were met. An analysis of the objectives and goals revealed that there was a major improvement in the incorporation of minority culture students into the educational life of the school. The intervention programs had a positive impact upon the teacher's awareness of the unique needs of minority students entering a suburban community. (Author/ABL)

Journal Announcement: RIENDV92

A manual was developed for use by the Rhode Island Department of Education to introduce the faculty of the William R. Davies, Jr. Career and Technical High School (Lincoln, Rhode Island) and other secondary schools to the rationale for integration of academic and vocational instruction. A literature review was conducted to provide a conceptual framework for the manual and to determine the type of content to be included. It addressed cognitive, economic, and social justice issues relevant to integration of academic and vocational instruction. A search for similar manuals found none. The manual created contains nine sections, eight of which are concerned with conceptual categories of information that would document and substantiate the rationale for integration of academic and vocational education. The nine sessions are: (1) The Carl D. Perkins Vocational and Applied Technology Act of 1990; (2) Global Competition; (3) The Changing Nature of Work; (4) American Education - How Our Students Perform; (5) New Cognitive Research and Implications for Vocational Education; (6) Employability Skills for the Changing Nature of Work; (7) Models for Integrating Vocational

and Academic Education; (8) Specific Benefits of Integrated Curriculum; and (9) Conclusion. This report's five chapters discuss background and significance of the research; the literature review; the methodology used; the results obtained; and conclusions, implications, and recommendations. Appendices, amounting to about one-third of the report, include a list of 16 references, validation letters, and the complete manual. (YLB)

Geographic Source: U.S.: Pennsylvania
Journal Announcement: RIENDV92
To address the needs of African American students at Beaver College in Glenside (Pennsylvania), a one-credit freshman orientation course on Afrocentricity was developed. The course was intended to increase the comfort level between the institution and its culturally diverse students and add additional support for increased retention of African American students. The course was developed in three stages. The first stage was an informal survey of six neighboring colleges to determine what courses they offered in the subject area. Suggestions from three schools were considered; and recommendations on scope, sequence, and materials were sought from M. Asante, an expert in Afrocentricity. The second phase included the development of the course using the "Principles of Instructional Design" of R. M. Gagne and L. J. Briggs. Objectives were determined for a 10-week course. The third phase involved review and validation by four content area experts. The course was included on the spring 1992 academic calendar. An appendix contains the syllabus, and there is a 16-item list of references (SLD).

In 1992, a practicum was undertaken to develop a student retention plan for use at Sue Bennett College (SBC), an independent junior college located in London, Kentucky. The college had a retention rate of 33 percent between the freshman and sophomore year in 1990 which was a decline from the 62 percent in 1985. The development of the plan included a review of the literature, the solicitation of retention plans from other institutions of higher education, input from the Student Life Committee, and input from various deans, administrators, and outside experts on retention. The plan emphasized the following: (1) the development of an enrollment management plan that would help foster an environment for persistence; (2) campus-wide participation, academic integration, faculty involvement, academic tutoring, academic advising, financial aid expediency, and freshman orientation; (3) the reduction of bureaucracy in admissions and registration, increasing hours in offices, increasing commuter registration, increasing hours in dormitory, increasing computer access, and increasing student communication.

parking, and offering more support services; (4) creative scheduling of courses and social activities; (5) faculty mentorship, academic support, early alert systems, and child care; (6) a caring attitude on the part of the faculty and the staff; (7) a recruitment effort that emphasized retention; (8) an ongoing institutional research effort; (9) a communications effort that included faculty, staff, and students; (10) an institutional support system designed to increase student competencies; (11) an evaluative system designed to assess the effectiveness of the plan; and (12) a campus-wide delegation of retention responsibilities. A discussion of the plan's implications and further recommendations are offered. Appendixes include the SBC retention plan and an SBC financial

aid plan. (JMC)

Geographic Source: U.S.: RIENOV92
Journal Announcement: RIENOV92
In recognition of the need to improve the cultural proficiency of high school students studying French, a 12-week unit was developed and implemented to teach the cultures of francophone countries to 20 randomly selected first-level students. A survey and pretest were administered to determine students' ability to demonstrate knowledge and appreciation of French-speaking countries and people. The teaching strategy for the unit used a combination of student-centered activities such as dialogues, skits, minidramas, research projects, group discussions, and an interaction with another language class. A portable language lab with wireless headsets and cassette tape recorders facilitated a variety of simultaneous activities. Individual and group activities and a posttest measured the outcomes. Improvements in students' cultural proficiency were found in the following areas: ability to recognize and locate francophone countries on a world map; ability to describe in both oral and written forms cultural patterns of French-speaking people; and ability to express ideas about diverse aspects of life in francophone countries. Appendices contain the student survey, questionnaire, world map, and test. Contains 26 references. (LB)

Journal Announcement: RIENDV92

This practicum was designed to increase enrollment of preschool children with special needs in seven regular day care centers. Corollary aims were to improve the attitudes of day care directors and staffs towards integration; to increase parental and community awareness of integration; to keep governmental day care staff aware of the program in progress; and to introduce concepts of "appreciating differences" to nonhandicapped preschool children. Seven workshops were held with directors and key staff. Other practicum activities carried out included attitude surveys of staff and directors; interviews with directors; parent awareness sessions; and consultation visits to day care centers. Three children with special needs were subsequently enrolled in regular day care programs, and staff and director attitudes toward integration became more positive. Issues of power and control are discussed. Appendices contain the attitude survey instrument for childhood professionals, data supporting practicum findings, and various administrative materials. (Approximately 80 references) (JDD)

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIENDV92
This practicum attempted to increase the number of minority elementary students in prek kindergarten through grade 5 found eligible for placement in a gifted program by enhancing the

efficiency and effectiveness of the screening instruments and by providing inservice training to increase the understanding of gifted characteristics and program eligibility by school staff. Four hands-on inservice training sessions were used to familiarize teachers, counselors, and administrators in target schools with a preselected group of norm referenced screening instruments and with characteristics common to gifted minority and limited English proficient children. A matrix was developed to assist the Child Study Team in its review of referral information. The program met all four of its objectives: (1) a 10 percent increase in the percentage of Black and Hispanic students found eligible for placement in a gifted program; (2) an increase in the number of Black and Hispanic students screened for gifted testing in 80 percent of the 100 referring schools; (3) an increase in the percentage of young (prek kindergarten through grade 2) minority students screened; and (4) improvement in the understanding of gifted characteristics and eligibility criteria of teachers and administrators. Appendixes include a record sheet of gifted screening information, the survey of gifted identification procedures and practices, an assessment of characteristics of giftedness, and a pilot gifted screening program log sheet. (64 references) (DB)

ED346418 CG024327 Improving Negative Behavior in Adolescent Pupils through Collaborative Initiatives.
Rhone, Elvie
1992
73p.; Ed.D. Practicum report, Nova University.
EDRS Price - MF01/PC03 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIENOV92
A review of the counselor's log at one elementary school serving students through the eighth grade indicated that during the fall of the 1990-1991 school year, 55 pupils were referred for negative behavior. Negative behaviors included refusing to obey, constantly causing disruptions, stealing, verbal or physical assaults, withdrawn and uncooperative behavior, and family problems. A curriculum was developed to decrease the number of adolescent pupils who exhibited negative behavior and to enhance the students' coping skills. (cont. next page)

Parents, teachers, high school counselors, and community organizations were to act as change agents. To meet the goals of the practicum, group guidance sessions were designed in collaboration with teachers, high school counselors, administrators, and community agencies. Twelve weekly sessions were held with emphasis on self-esteem, role models, character building, and appropriate behavior. Teacher mentors were used to enhance the program. Data were collected before and after the sessions and were obtained from teacher behavior checklists, interviews, questionnaires, needs assessments, and student self-evaluations. Data analyses revealed that all of the outcomes were achieved. The number of pupils exhibiting negative behavior decreased dramatically. The findings suggest that pupils exhibiting negative behavior can learn better coping skills and that collaboration with parents, teachers, other counselors, and community agencies are key factors in helping adolescents. It appears that group guidance and mentoring are excellent ways to increase and enhance the counseling services provided for adolescents. (NB)

Organizational Guidelines for Establishing a Core Team To Deal with Alcohol and Drug Abuse: In a High School
Sarnecki, Thomas G.
1992
152P.; Ed.D. Practicum, Nova University.
Language: English
Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Florida
Journal Announcement: RIENOV92

A practicum was designed to organize a drug prevention/intervention program for high school students. Goals of the practicum were to organize a core team to address alcohol and drug prevention/intervention strategies; to assist staff members in recognizing early warning signs of potential substance abusers and at-risk students; and to develop an effective referral system for students suspected of alcohol or drug use. A 2-day inservice workshop was conducted for staff members to make them aware of the core team and substance abuse counselor's roles and responsibilities in addressing substance abuse problems. A handbook was developed that focused on intervention procedures for students identified as drug and alcohol users, prevention of alcohol and drug use, objectives of an alcohol and drug awareness program, student drug policy, referral to community programs, and referral guidelines. This practicum was successful as verified by the adoption and implementation of eight objectives. An indirect

outcome of the practicum was the enlistment of the University of South Florida's "SAFE TEAM," a drug prevention/intervention grant program to assist all high schools in the author's county with a training program to develop peer teams to help fight drugs. Fifteen appendixes contain: a Self-Reporting Rating Scale; pre-test and post-test results of the scale; survey results of student assistance program models; description of the teacher/counselor or student assistance program inservice; student referral form; letter to parent; high school officer's classroom presentation list; attendance and activity reports; contacts with media; list of media center's substance abuse education/prevention video; a list of ways to identify high-risk substance users, grades 9-11; and core team logo. (Contains 100 references) (NB)

Document Type: PRACTICUM PAPER (043)
Geographic Source: U.S.; Oklahoma
Journal Announcement: RIEOC92
Target Audience: Teachers; Practitioners

A study was done at Panhandle State University (Oklahoma) examining whether high school grade point averages or ACT (American College Testing) scores provided a better predictor of freshman academic success. Study procedures included a review of the literature, meetings with the academic vice president and five deans, as well as examination of dropout information on the university's 1989-90 year and analysis of information on 170 freshman. Conclusions from the analysis indicated that other factors besides the two scores may have an impact on college grades such as social orientation, age, and student goals at time of enrollment. However, evidence indicated there was a relationship between the high school average, ACT scores and college grades. Analysis of the freshmen in subgroups based on sex and ACT scores revealed that the multiple correlation difference was not large enough to justify the decision to use just one as a single predictor for all subgroups. However, the high school grade average was a better predictor for males and for those with ACT scores (cont. next page)

above 18. Included are 16 tables, appendixes containing a report of the meeting with the academic vice president, and a report of meetings with the five deans. Also included are 10 references. (JB)

In response to low reading scores among first grade students of English as a Second Language (ESL) in one inner-city school, the teaching techniques of semantic webbing and brainstorming were used to improve student reading skills. Subjects were eight first grade ESL students. Pretests were administered to assess student levels of reading comprehension and critical thinking. Students then participated in semantic webbing activities where brainstorming techniques were taught and encouraged. After 12 weeks, a posttest was administered. Results indicate that 87% (seven of the eight students) improved reading comprehension, but only one student's score improved by the suggested criterion of 50%. One student's scores dropped. These results were attributed to the fact that English was the students' second language and that students most often spoke Haitian Creole among themselves. Some behavior changes were observed, including improved skills in critical thinking. Increased brainstorming for problem-solving, better interpersonal communication and use of positive challenges, and application of thinking skills to other subjects. These indicate that the technique was somewhat effective. Pre- and posttests and results are appended. (MSE)

Geographic Source: U.S.; Florida

Journal Announcement: RIEOCT92

A practicum aimed to increase the relevancy (to the ethnically diverse students of contemporary classrooms) of the regular high school senior English course in British literature and composition by expanding the curriculum to include selections from countries (other than the United States) influenced by the British Colonial Empire. Using a thematic approach, works were selected to include writers representative of African, Asian, and Hispanic cultures. These additions were emmeshed into the regular canon of British authors. Learning styles and cooperative learning strategies were employed to promote cooperation and understanding within the classroom. The writing component was designed to foster self-exploration through interaction with the literature at a more personal level by means of personal essay, journal, letter, and portfolio writing. Group editing and sharing were encouraged. While the formal implementation period covered only a three-month period, the expanded syllabus covered the year-long course. The practicum outcome 'as positive, with results of a pre- and post-survey of students showing that each of the four ethnic groups (Asian, Hispanic, Black, and White) gained dramatically in strength of identity with major characters in the expanded British literature curriculum. Results support the perceived need for educators to attend to minority students' need to encounter role models representative of their particular cultures. (Four figures and 11 tables of data are included. Thirty-five references and four appendices--containing a questionnaire, the surveys, and the course outline--are attached.) (Author/SR)

Journal Announcement: RIEOCT92

A practicum sought to measure and document real learning in natural circumstances through the use of whole language assessment techniques involving observation checklists on which skills for the language arts (writing, spelling, reading) were listed. Skills were measured using descriptor words such as "stable," "evident," and "not evident" in order to plot a student's progress in literacy development in a positive way. A reading behavior form was also included. This classified students into one of three learning groups, according to the answers given to a list of seven questions; emphasis was on behavior and learning style. These alternative assessment forms were collected in a simplified seven-page booklet format for each student. Not only could the student's skills be assessed quickly through check marks in the appropriate columns, but his or her style of learning was also included in the booklet. Results indicated that teachers who used the Observation Checklist preferred this type of assessment to the report card format, and found instructional decisions easier to make when using these forms. (Two tables of data are included; 37 references and 7 appendices--containing a questionnaire, the checklists, the reading behavior form, and learning activities handouts--are attached.) (Author/SR)

Journal Announcement: RIESEP92
This paper reports on the implementation and results of a program that addressed the problem of aggressive behavior among students at an urban elementary school. Program objectives were to bring about a decline in the number of referrals written for students' aggressive behavior; an increase of parents' supervision of children's media

(cont. next page)

consumption; and an increase in students' use of successful conflict resolution strategies. A group of 100 parents participated in a 10-week program that focused on: (1) statistical information about children's aggressive behavior; (2) types of parents; (3) parents' listening skills and self-awareness; (4) monitoring and evaluation of children's consumption of entertainment media; and (5) children's positive self-images. A group of 30 children attended 10 weeks of teaching sessions that examined creative problem-solving techniques, such as mediation, visualization, and values perception. Pre- and posttests were given to parents; children completed posttests only. The number of referrals for aggressive behavior did not decline sufficiently during the 10 weeks to meet the first objective. The second and third objectives were met, as indicated by the fact that more than 60 percent of the parents reported that they supervised their children's media exposure, and by an 89.6 percent success rate on students' conflict resolution posttests. An 18-item reference list is provided. Appendices include copies of the parent survey letter, the parent survey, and parent and student posttests. (BC)

objectives was measured through post-training self-assessment. The assessment instrument was mailed to approximately 60 faculty members who had participated in at least one technology workshop. Of these, 28 responded. Results indicated that objectives one, two, and four were clearly met and that objective three was apparently met, although this was not as clearly evidenced and supported as were the other three. During the implementation phase, a number of individual, group, and campus training strategies were selected and tested in both environments. Faculty needs were assessed, and appropriate strategies were implemented in response to them. For both environments, literacy awareness and utilization increased as a result of the program. Overall, the identified and implemented strategies formed the basis of a sound model training program for technology integration. The bulk of the report consists of 17 appendices containing materials utilized at all stages of the curriculum, including an instructional technology 5-year plan, needs assessment forms, curriculum materials, and evaluation instruments. Includes 13 references. (JMC)

In 1992, an evaluative study was conducted to describe systematically the characteristics of Northern Maine Technical College's (NMTC's) faculty and students with respect to specified teaching and learning variables. The study sought to determine and outline appropriate instructional improvement strategies for possible implementation at NMTC, using a case study research design. The study sample consisted of 209 full-time students and 36 full-time faculty. Conclusions, based on an analysis and comparison of the faculty and student data, included the following: (1) preferred teaching

(cont. next page)

47
KNIGHT-RIDDER INFORMATION

techniques of the NMTC faculty included lecture, written exams, questioning students, and homework; (2) the least favored teaching techniques of the NMTC faculty included panel presentations and debates, role-playing, independent study, and student presentations; (3) faculty's personality type and affected the teaching techniques chosen for use; (4) teaching experience was not a factor in the frequency of use of certain teaching techniques by NMTC faculty; (5) NMTC faculty believed that the traditional didactic teaching methods, involving the giving of information and the application of knowledge, were the most beneficial for assisting NMTC students to learn; (6) NMTC students found predominantly teacher-centered learning techniques, such as "on-the-job" training and watching a demonstration as the most helpful to their learning; (7) NMTC students viewed predominantly student-centered learning techniques, such as giving a presentation in front of the class or leading a class discussion, as not helpful to learning; and (8) gender differences existed in the ways students preferred to learn, and age and marital status did influence the way students learned. Appendixes provide the survey instruments, a sketch of personality types, and notes on teaching techniques. (JMC)

Creating and Implementing a Model for Motivating Recreational Reading Using a Whole Language Approach for Secondary School Students.
Dickinson, Susan
Jan 1992
82p.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.
Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP92
A practicum was designed to increase the amount of recreational reading by secondary school students, and to improve students' attitude toward reading, thus decreasing disruptive behaviors in the classroom. A whole language workshop approach was implemented over an 8-month period in two high school English classes, grades 10 and 11, college preparation level, with a total of 104 students. Many of the students had the skills to read but chose not to do so. The workshop was student-centered so that students could become self-directed, choosing reading materials of interest to them.

The focus of the curriculum was on reading, thinking, and discussion, and the teacher's role was that of facilitator. Pre- and post-surveys were administered to record changes in pre-student attitudes and improvement in leisure reading. Results showed that students' attitudes toward reading improved; that more students were involved in leisure reading; that fewer disruptions occurred during sustained reading in the classroom; and that students increased the amount of their free time spent in leisure reading. While three of the four practicum objectives were not met, the improvement shown was positive in terms of overall success. (Six tables of data are included: 33 references and five appendixes containing the survey of leisure reading, leisure time survey, time analysis of a week, instrument for measuring disruptions, and reading interest quiz are attached.) Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.; Florida
Journal Announcement: RIESEP92
A practicum used a program of high interest activities involving reading to address the problem of low reading comprehension grades and test scores of eight students in the second through fourth grades, who were an average of 1 year behind the norm in reading. The program's six units included a listening unit, computer technology unit, daily activities unit (including the newspaper, restaurant menus, cooking, TV guide, and favorite magazines), drama unit, writing unit, and library unit. Each unit took 2 or 2.5 weeks to implement, and the practicum lasted 3 months. Results indicated a desire to participate in more reading activities as evidenced by the increased number of books checked out, an improvement in attitude toward reading, an improvement in reading grades, and an increase in critical thinking skills. Results suggested that the more relevant reading became to the student through high interest activities, the greater the reading (cont. next page)

comprehension. (Twenty-one references are attached. Appendixes include the student questionnaire, parent questionnaires, the "Reading Cheer Song," a manual, tips for parents, the elementary learning channel preference worksheet, award sheets, and software evaluation forms.) (SR)

Language: English

Document Type: PRACTICUM PAPER (043)

Geographic Source: U.S.: Florida

Journal Announcement: RIEAUG92

The goal of this practicum was to design an effective program orientation session for teachers and parents that would enhance parent involvement in an American Indian Head Start preschool program. Objectives were that: (1) a total of 90% of families and 100% of staff would attend a program orientation session; (2) a parent involvement activity idea book would be generated during the orientation session; and (3) half the families would volunteer twice a month for participation in the classrooms. Implications for continuation and duplication of the practicum are included. Results revealed that even though the objectives were not met, the program orientation session effectively enhanced parent involvement, particularly in terms of classroom activities, policy, and decision making. Factors that contributed to the failure to attain practicum objectives are discussed. Appended are 20 references and related materials. (GLR)

Development and Implementation of a Program of Evaluation To Support Improvement of Organizational Components in a Child Care Center.

1992

79P.; Ed.D. Practicum, Nova University.
EDRS Price - MF01/PC04 Plus Postage.

Language: English
Document Type: PRACTICUM PAPER (043); TEST, QUESTIONNAIRE (160)

Geographic Source: U.S.: Florida

Journal Announcement: RIEAUG92
This practicum's goal was to improve the organizational components of a university child care center through the development and implementation of a comprehensive program of evaluation. Several evaluation models were considered. The Context-Input-Process-Product Model was selected for its flexibility in providing formative and summative results, its usefulness for decision making and problem solving, and its ability to incorporate currently used evaluation methods. A number of evaluation tools, such as parent evaluation of services and student evaluation of field experience, were adopted. Evaluation results were used to develop program goals. Results were also used by staff members to develop objectives for personal development. Results of the practicum were mixed. A comprehensive program of evaluation was implemented and organizational components were improved, but personnel perceptions of the organization's health demonstrated a downward trend. A number of reasons for the mixed results were offered, including the extra effort required of personnel to make changes and the fiscal status of the center. It was asserted that a comprehensive program of evaluation would take at least 2 years to become fully routinized in the program. (Appendices comprising half the document include: Organizational Health Checklist, Calendar of Activities; Introductory Material for the CIPP Model; Samples of Evaluation Tools; and Organizational Health Checklist of Practicum and Postpracticum Results.) (Contains 28 references.) (Author/GLR)

Journal Announcement: RIEAUG92

A practicum project was designed to improve effective communication between parents and a private school summer program by publishing a student-generated school newspaper. A pre-questionnaire concerning the effectiveness of communication between the home and school was distributed to the parents of the 54 students enrolled in an 8-week summer program held at a private K-8 school. The seven sections of the first issue of the newspaper (entitled "On Your Mark") were pinpointed based on the results of the questionnaire and conversations with teachers. The first issue of "On Your Mark" appeared in the fourth week of the program and included material from students and teachers. Students' responsibilities and contribution grew in subsequent issues of the newspaper; the fourth volume was produced entirely by the students through the culmination of classroom instructional time in computer technology and newspaper publication. A post-questionnaire was sent to parents in the last week of the program. Results from the questionnaires indicated that: (1) 94% of the parents felt aware of upcoming school events at the end of the program; (2) 95% of the parents felt informed of their children's project; and (3) the students demonstrated the ability to format, organize, and publish a school newspaper using computer technology. (Survey instruments, all four issues of "On Your Mark," two mnemonic devices, and two tables of data are attached.) (RS)

Journal Announcement: RIEAUG92
A practicum used an integrated writing approach to improve

28 third-graders' ability to write descriptive paragraphs. The program consisted of two strategies: a process approach and a step-by-step approach. Success was measured by comparing the statistics of a pretest and a posttest and through observation, computer generated worksheets, and computer assisted instruction. Results indicated that 85% of the students could write a descriptive paragraph by the end of the 12-week implementation period. Students in the target group demonstrated positive changes in their daily writings and were motivated to use the computer to improve their writing. (Twenty-six references are included. Nine appendixes contain worksheets, bulletin board signs, and a descriptive words test.) (SR)

Journal Announcement: RIEAUG92
A study examined whether students who underwent training and gained experience in the use of computer word processing techniques would score significantly higher on a writing test than students who received no such training. Students in two randomly selected English Composition II classes at Gloucester County College (New Jersey) were randomly labeled as either the experimental group or as the control group. Students in the experimental group spent one class period per week for 12 weeks in the computer lab receiving instruction and gaining experience in using computer word processing. Students in the control group received no such instruction. Students in both groups were given identical writing assignments. Comparison of holistically-scored pre- and posttests indicated that a significant difference existed between the posttest mean scores of the two groups, with the experimental group scoring higher than the control group. (Two tables of data are included.) (RS)

Journal Announcement: RIEAUG92

A practicum developed and implemented reading strategies to increase the positive attitudes toward recreational reading of a third-grade target group. The practicum focused on five central strategies for achieving objectives: alternative book reports, home leisure reading, guest reader program, read-aloud student response journals, and writing and publishing original works. Thirty minutes a day over a 12-week period were devoted to read-alouds and independent discussions as well as independent responses. Results revealed a successful increase in positive attitudes of the target group. Appendices include a reading survey and data, sample forms, and suggested readings with related critical thinking questions and activities. (Five figures are included.) (SR)
 Descriptors: Grade 3; Independent Reading; Primary Education ; Reading Aloud to Others; *Reading Attitudes; *Recreational Reading
 Identifiers: Reading Motivation

Journal Announcement: RIEAUG92

A practicum addressed the problem of low self-esteem of at-risk students by developing and implementing a 12-week dropout prevention program for 19 eighth-grade students in urban, middle class school. The program used five basic

strategies for raising self-esteem: affective skills training (using role playing, mapping, and brainstorming to help students learn to make decisions and solve problems), remediation of basic skills, implementation of an in-house mentor/protege program (in which each student had a "friend" on campus who offered support, encouragement, and understanding), and parent/teacher involvement. The program met affective and cognitive needs of students in a caring, supportive environment. Results indicated that students improved their basic skills in reading and demonstrated increased levels of positive self-concept. (Fifty-four references are attached. Extensive appendices contain pre/posttest results, parent correspondence, program implementation information, instructional material, and evaluation forms.) (SR)

Language: English
 Document Type: PRACTICUM PAPER (043)
 Geographic Source: U.S.; Florida
 Journal Announcement: RIEAUG92
 This paper describes a practicum that incorporated semantic mapping, "rich" context clue instruction, and teacher modeling into a 12-week instructional program for 18 Chapter 1 fourth-grade students in rural Georgia who had shown deficiency in vocabulary knowledge with standardized test scores below the 50th percentile in the second and third grades. Comparison of the pre- and posttest results indicated improved vocabulary knowledge and context clue usage. Findings suggest that, although student attitudes demonstrated a positive change, a longer implementation period is needed to make substantial gains in this area. (Three tables of data are included: 25 references and 6 appendices--including teacher-made pre- and posttests, a sample word list, and mid-implementation tests--are attached.) (PRA)
 Descriptors: *Context Clues; Grade 4; Intermediate Grades; Modeling (Psychology); Problem Solving; *Reading Skills;

 Journal Announcement: RIEJUL92

This practicum used a weekly tutorial program to improve students' written expression using precision teaching as a monitoring tool. Remedial children were referred for instruction by teachers, school psychologists, or parents. The practicum was based on the students' needs for a program strengthening writing mechanics and reading comprehension skills. Task sheets (assignment sheets), timetables of individual skills pinpointed, charts of progress made and evaluation of learning promoted self-monitoring and self-motivation. Critical thinking skills and appropriate learning strategies were implemented. Techniques using visual prompts, graphic organizers, and pre/post writing activities were stressed. Results showed that students' written expression and reading comprehension improved using precision teaching as a monitoring tool. Students also demonstrated increased proficiency in problem-solving skills and demonstrated critical thinking and writing abilities. (Five tables of data are included; 11 appendixes, including graphs of student data, charts of individual progress, samples of writing, and samples of learning techniques used, are attached. (Author/SR))

 Journal Announcement: RIEJUN92
 A Student Discipline Code (SDC) was developed to govern student life at Sue Bennett College (SBC), Kentucky, a private two-year college affiliated with the Methodist Church. Steps taken in the process included the following: a review of relevant literature on student discipline; examination of discipline codes from six other educational institutions; analysis of the discipline records from SBC for the previous 3 years to determine previous patterns of infractions and resulting actions; and solicitation of input from the Student Government Council, SBC staff, and administrators at other institutions. The proposed code was reviewed by the Student Government Association, the Faculty Discipline Committee, the College Administration, and Deans of Students from other colleges before submission to the college president and subsequently to the board of trustees for final approval. The SDC, which was incorporated into the student handbook and disseminated throughout the college community, includes regulations dealing with health and individual safety; procedures for differences of opinion; individual conduct; traffic safety; care of property; and the discipline process. Recommendations for other institutions developing a SDC include: (1) solicit advice from the college community during the development of the code and later while evaluating its effectiveness; (2) review the code annually; (3) evaluate the consistency of the disciplinary code with the college's mission and goals on a regular basis; and (4) evaluate the effectiveness of the sanctions and the involvement of the student body in the governance of the judicial process. A copy of the disciplinary code at SBC is appended. (PAA)

Journal Announcement: REJUN92

A practicum was designed to deal with the problem of cheating in a public alternative high school for at-risk students. Questionnaires completed by the teachers and the student body indicated that students had a deficiency in understanding and applying principles of accepted right and wrong to situations involving the possibility of cheating. Major goals were that students comprehend the principles and motives that underlie behavior in such situations, learn strategies for use in making moral decisions, understand what plagiarism is, and become familiar with research methods by which to avoid it. The solution created was a 12-week teaching unit for the writer's English classes. The unit consisted of three branches: branch 1 involved the reading of literature with related work; branch 2 dealt with the study and application of moral issues and strategies; and branch 3 covered research work and the comprehension of plagiarism. Literacy selections were used to introduce the subjects of honesty and dishonesty and their results; discussion groups dealt with what was happening and what should be happening. Results indicated that, while the practicum's major goals were only partially achieved, the practicum was a start toward seeing what can be accomplished in the field of moral studies through the English curriculum. Results showed that the three branches offer sensible methodology for dealing with the issues of right and wrong and are worthwhile as part of an English curriculum. (Three appendices--questionnaires, the attitude toward cheating scale, and the pre/posttest--and 45 references are attached.) (PRA)

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

The sample sticker shown below will be
affixed to all Level 1 documents

Check here

For Level 1 Release:

Permitting reproduction in
microfiche (4" x 6" film) or
other ERIC archival media
(e.g., electronic or optical)
and paper copy.

The sample sticker shown below will be
affixed to all Level 2 documents
